PREFACE

I wandered into a church, one day, for an hour of quiet. There were some people in front, but I selected an obscure corner where I would be alone. In my contemplation I did not notice the church fill up, did not notice the quality of restlessness in the air. It was not until an organ directly above me began the stirring strains of the march from Lohengrin that I realized I was an unbidden guest at a wedding!

It was too late to leave. The wedding procession had started. In the dingy little church I watched the principals try to enact a scene of fashionable splendour. There was a little flower-girl who forgot to strew her flowers before the bride; a page who stumbled and went scurrying after the ring; an usher who persisted in grinning at the unaccustomedness of his high silk hat.

But no one smiled. And when the bride entered there was a sudden, hushed silence, as though everyone had taken one long, deep breath.

I watched her as she walked down the aisle, this little twentieth-century bride. As is the way of unruly imaginations, I pictured her a bride of long ago. Did she realize that she was actually observing certain ceremonial rites that were practised thousands of years ago? Did she realize that the traditions so dear to her heart—so dear to bride-hearts the world over—were based upon the fears and superstitions of primitive man, upon age-old customs that had been handed down to her through many generations?

Why was her wedding gown white? Why not pink, or green, or yellow? Why were there orange blossoms on her veil? Indeed, why a veil at all? And the wedding ring, the bridal procession, the handful of rice—surely they had some meaning.

The ceremony did not last long. In half an hour it was over. The little church was deserted; nothing remained but a trampled rose or two. But something had happened to *me*. I had glimpsed behind the pages of history and saw promise of a treasure rarer than any in the Valley of the Kings!

Like another Lord Carnarvon I set out to explore the pages of the past. I traversed the centuries and came, trembling, upon the cradle of the human race. I stood amazed upon the threshold of

life. And mankind passed by in pageant before me! Cities created themselves before my eyes. Tangled masses of folklore and superstition confronted me. But armed with the pick and shovel of the archaeologist and the pen of the historian, I did not hesitate to begin my ride across the centuries.

I peeped into the caves of our hairy ancestors and saw their mode of worship. I sat in the gardens of Babylon and watched civilization plant its first precious seeds. I wandered through ancient European wastes and saw new towns lift their faces to the sky. I shadowed Queen Elizabeth; I glimpsed the gaudy ballrooms of Louis XV; I followed Columbus across the sea to America.

Oh, it has been a wonderful task! I have peered into marble palaces and sat with cave dwellers on the hills. I have danced with Indians in young America and dined with savage cave men of long ago. I have browsed in old Egypt, following civilization along the Nile. I have watched customs grow out of the fears, the superstitions, the ignorance of early life. And I have followed these customs through the ages, watching them thread their way into every country, among all peoples, weaving themselves eternally into the pattern of life. I have traced them even to our own polished twentieth-century civilization, marvelling that they should have changed so little in the centuries between.

This, then, is precisely, as the title implies, a book of customs. I have traced back to their source the customs which we to-day observe—the customs which we accept without question. Why should black be the colour of mourning? Why not red, or green, or white? Why do we shake hands in greeting, instead of touching noses, or foreheads, or elbows? Why do we throw rice after the bride? Why not corn, or oatmeal, or barley?

In "The Customs of Mankind" I shall concern myself solely with those customs which we to-day observe, which we to-day accept. "The Book of Etiquette," which was so heartily welcomed by the public, tells you what to do on every social occasion. "The Customs of Mankind" tells you not only what to do, but why you do it.

I offer in this volume many "discoveries" that are peculiarly my own. Some of the customs I write about have never before, to my knowledge, been investigated. They are customs that have long been buried in impenetrable mists of antiquity, and that I have snatched from oblivion only through the most painstaking research.

"The Customs of Mankind" has taken me over a period that extends backward for 500,000 years, and over an area that includes practically every country, civilized and uncivilized, in the world. The research entailed the use of thousands of volumes and papers, the most important of which are included in a list of authorities at the end.

PREFACE

vii

I wish here to extend my thanks to the New York Public Library for the use of reference books; and to the Metropolitan Museum of Art and the Museum of Natural History, both of New York City, for the use of photographs that appear in this work.

LILLIAN EICHLER.

September, 1923.

THE CUSTOMS OF MANKIND

CHAPTER I

INTRODUCTORY

In every department of human thought there is present evidence of the persistence of primitive ideas. Scratch the epiderm of the civilized man, and the barbarian is found in the derm. Man is the same everywhere at the bottom; if there are many varieties, there is but one species. His civilization is the rare topmost shoot of the tree whose roots are in the earth, and whose trunk and larger branches are in savagery.

—EDWARD CLODD.

THE CHILDHOOD OF MAN

THE writer on primitive man and on ancient civilizations does not always know precisely where to start. He walks, for a while, hand in hand with fancy, following wherever it may lead. All history seems to him as but yesterday. And prehistory seems a swaying mass of shadowy forms from which he takes or leaves, according to his purpose.

But he who would build history, not with the ordinary facts of evolution, but with the manners and customs of man himself, has no choice. He is obliged to go back to the very cradle of human existence, to project himself into the daily life of many thousands of years ago, studying man in his infancy, walking beside him through barbarism, through the early gropings for reason, through the dawn and development of religion, through civilization. And he must take the vast store of raw material which he gathers, interpreting it in terms of simple human nature.

No historian or antiquarian can tell you the exact day

when man for the first time stood erect upon the earth and gazed upon a universe that had been created for him. Many have guessed; many have tried to prove, but no one knows the exact period or the exact spot where man first began. We cannot, then, be certain about the origin of man, but we can be reasonably certain about his antiquity.

The earliest type of a man-like creature which has been discovered until now is the *Pithecanthropus erectus*, which means simply the *erect ape man*. Authorities believe that the *Pithecanthropus* man lived about 500,000 years ago, which was in the Pliocene or pre-glacial period. The remains of this man were found in Trinil, Java, by Dr. Eugène Dubois in 1892.

Regarding the ancestry of man, not all authorities are agreed. H. G. Wells adopts the theory that man's immediate ancestor was a ground ape. This, on the whole, seems the most plausible explanation of the still obscure origin of man, and many scientists and historians are inclined to accept it.

But Henry Fairfield Osborn (one of the authorities who places the age of the *Pithecanthropus* man at 500,000 years) says, "Man has a long line of ancestry of his own, perhaps two million or more years in length. He is not descended from any known form of ape, either living or fossil."

David Starr Jordan, in his "Footnotes to Evolution," says:

Man is not simply a "developed ape." Apes and man have diverged from the same primitive stock—ape-like, man-like, but not exactly one nor the other.

One writer on primitive man asks, "Have you noticed that a baby loves to get its fingers tangled up in your hair—always keeping its tiny fist closed, always attempting to grasp everything it can place its hands on? And if there is nothing within reach, it keeps its hands closed tightly in imitation of the act of holding on." This, he declares,

would seem to bear out the fact that man is developed from the ape or the primate!

Of course, no one can definitely say when the brute man ended and the human man began. Joseph McCabe, in his "Evolution of Civilization," believes it is safe to say that at least 1,500,000 years have elapsed since the human branch of the tree of life separated from the ape branch. And Sir Arthur Keith, who is one of the leading authorities on the remains of prehistoric man, has a diagram in his "Antiquity of Man" (1915) representing the tree of life, in which the human stem branches off from the anthropoid group in the Oligocene Period. The geologist Professor Sollas says that this Oligocene Period closed about 1,800,000 years ago.

These few but impressive hypotheses are cited merely to bring to attention the long primitive heritage of the human race. Man has an ancestry reaching back, not five or six thousand years, but a half million years at least. Skeletal remains have been found which indicate that in Europe the existing species of man (*Homo sapiens*) goes back at least 30,000 years.

We do not attempt to discuss the origin of man at any great length in this volume, or to refute any of the conclusions already reached by authorities. The subject is so vast that, to discuss it intelligently, would require a volume in itself. We wish solely to give you an idea of the age of man and the centuries in which he has been developing. You know now that, though the compilers of the sacred narrative did not even hint at a prehistoric era, man lived hundreds of thousands of years ago, half brute and half man, ignorant of the simplest arts save, perhaps, the making of flint implements, devoid of love and tenderness, depending upon brute strength for his very existence.

And so, for many centuries, man has lived and dreamed and laboured, leaving for us who follow in his footsteps a record of what he has thought and what he has done, even as we are now leaving for future generations a record of our thoughts and our achievements.

SOURCES OF INFORMATION CONCERNING
PRIMITIVE MAN

The reader will ask—and with justice—how it is possible to write of the manners and customs of men who lived so very long ago. What about the people who left no record of their existence—who lived and died in a brief span? What about lands that lifted their faces to the sun, brought forth life, and vanished for ever beneath the surface of the sea? Who knows what forgotten civilizations hide their calcined bones, layer upon layer, beneath the feet that tread on life to-day?

Perhaps there *are* volumes in the history of life that have never been recorded, and thus never will be known. But for our purposes it is entirely sufficient that we concern ourselves with the facts that are known, that are recorded. Whatever has happened of importance in the vast ages that have gone by has somehow left its trace. And, of course, what facts omit, imagination can sometimes supply.

In studying the early history of man and society, the chief sources of information are archæology, anthropology, mythology, and folklore, and later, the sacred writings. The archæologist emerges from the dark silences of tombs, bringing into the light of the twentieth century new truths concerning primitive man. The anthropologist studies the races of the world, studies man as a unit in the animal kingdom, and teaches us to understand the savage as we understand ourselves. Mythology and folklore give us a rare insight into man's method of reasoning, reveal to us the fancies and conceptions of early thought. And the sacred writings, being the first histories, record for ever the manners and customs of life at the very inception of civilization.

Archæology.—The great master key to the understanding of man's primitive condition is held by prehistoric archæology. The archæologist collects and compares the material relics of forgotten races—the axes and the arrow-

heads, the sharpened bones and woven baskets. With pick and shovel he pierces the darkness enveloping the early history of man. He uncovers the ruins of ancient cities, removing the litter of ages from their bowels. He delves into long-sealed tombs and carries out rare treasures of another age.

Through the findings of the archæologist it is possible to reconstruct the buildings, the utensils, the burial grounds, the clothes—all the material things of man as they existed long ago. And thus we are able to piece together the story of daily life thousands of years ago. Standing at the elbow of the archæologist, we are able to transplant ourselves, project ourselves into the daily life of the old race whose relics lay revealed before us, and so come to know and understand the people of whom we write.

Few localities have attracted a deeper degree of archæological interest than Egypt. The Pyramids and the Sphinx lift their lofty heads into the heavens—and are silent. But on the walls in the palaces and on the monuments are facts that give as clear an index to the life of the early Egyptian as would any definite history.

It was a custom in Egypt to preserve important parts of history and important facts of daily life by engraving and carving descriptions of them on the walls in the palaces and on memorial stones. The inscriptions are in the form of pictures with combinations of syllables added—hieroglyphics, as they are called. Living forms and living scenes were portrayed by the ancient sculptor and painter. This “language of the Pharaohs” is an important source of information for the writer on civilization and on primitive man.

If you have ever viewed the Sphinx at dawn you know what a feeling of awe takes possession of you—as though you stand for a moment at the very beginning of things. Yet, though Egypt is old and gray, though the first phases of civilization are mirrored in the waters of the old Nile, who knows what ancient civilizations await the pick of the archæologist in China, in India, in our own America?

Anthropology.—When a tomb is opened and both skulls and implements are found within it, the archæologist keeps the implements, assorts them, compares them, rendering all information concerning them accessible to future investigators along the same line. The skulls and human bones he hands over to the anthropologist.

In other words, the archæologist studies civilization and the anthropologist studies races. It is the anthropologist who speculates as to the age and origin of man; who takes a bit of skull and reconstructs therefrom the entire man. The anthropologist tells us much about the whys and wherefores of man's customs by revealing the effect upon the nature of man, of climate, food supply, and other external conditions.

At one time individual explorers devoted their time and money to the investigation of prehistoric man and his remains. But since 1880 organized institutions of anthropology have taken the spade out of the hands of these individual explorers, and both the archæologist and the trained anthropologist are now associated.

The science of anthropology makes it possible for us to *visualize* the men of whom we write—see them as, very probably, they actually appeared. The anthropologist gives us a very fair idea of how the *Pithecanthropus erectus* looked, although only a handful of bones were found in Java.

But perhaps the greatest service of the anthropologist is one who writes of the manners and customs of primitive man is his study of existing savage races—the last living link that binds us to our prehistoric past. He goes to the lands that have been cut off from the main stream of the development of mankind, where our savage brothers have lived and bred for centuries. And he tells us authoritatively of their age-worn customs, their habits of life, their primitive beliefs and ceremonials.

Mythology and Folklore.—What the primitive mind lacked in reason it made up in imagination. Beautiful tales and legends have come down to us in the form of mythology

—tales created in the minds of primitive people who sought somehow to explain the phenomena about them. Childlike contemplation of the universe—of the stars, the moon, the lightning, the thunder—brought into being rude bits of fiction, bold nature myths which were gradually elaborated into complex and fascinating traditions.

The word “mythology” comes from the Greek word *mythos*, meaning fable. It is, then, a system of fabulous or fanciful opinions concerning nature, deities, beliefs—concerning man himself. The Indians have exquisite myths about the North Wind, the Hare, the spirit of Dawn. Nothing makes more delightful reading than the mythology of the Greeks—the beautiful myths regarding the beginning of things, the myths and legends of the gods. The tales that filter through Mexican mythology are stiff, cruel. In Buddhist Asia one finds myths that are at once exaggerated and artistic. And the Australians in the shade of the *gunyeh* relate ancient myths that are puerile, obscene, monstrous—born in the souls of savage myth-makers of long ago.

A myth in ancient times grew out of any little incident in nature, was related by the “wise man” of the tribe and promptly elaborated by the imaginative multitude. There is the robin, for instance, with its inexplicable bright-red breast. To the primitive mind, no bird’s breast is red without reason. Therefore the tale was fabricated that the bird daily bears a drop of water to quench the flames of hell, and the red is his mark of distinction!

The Chippewas have many beautiful myths concerning man. There was a time when any Chippewa Indian you met would have told you that sleep was caused by Weeng, a giant insect that one could actually see on a huge tree in the woods. It made a soft, murmuring sound with its wings and caused sleep by sending a host of fairies to beat drowsy foreheads with their tiny clubs. A charming bit of mythology, created long ago by some imaginative Indian who sought to explain the mystery of sleep to his fellows.

Since myths go back to the remotest antiquity and carry

with them through the centuries fragments of traditions, beliefs, customs, fears, superstitions, they offer the investigator a valuable source of information concerning early man. Mythology is, in a way, a relic or a history of the thoughts of our ancestors. Myth-makers, in their skill, built up veritable monuments of tradition, preserved by being handed down by word of mouth from generation to generation. Popular myths still exist among civilized peoples in the form of nursery tales such as "Jack the Giant Killer," "Beauty and the Beast," "The Lion and the Mouse," "Cinderella," and others. Many of our present-day superstitions also had their origin in ancient myths.

One might say that mythology is a part of history, though apart from it. Legends are usually confined to one or two particular localities; but myths spread everywhere, drawing their colourful threads through the pattern of life, weaving themselves eternally into the religions of mankind, finding a way into literature and civilization.

Folklore, in its fullest sense, is the remains of ancient mythology—the traditional lore which has survived in a certain locality, among a certain people. Properly speaking, folklore concerns itself solely with the legends, customs, beliefs, and traditions of the folk. Indeed, among unlettered peoples, folklore takes very largely the place of literature, and, like literature, reflects in marvellously accurate pictures the life of the people.

The study of folklore reveals strange relics of thought and of custom, primitive fancies and beliefs that are surprisingly close to the surface of civilized life. In certain sections of Germany and England there are mothers who actually believe that their children will grow up to be thieves if their nails are cut before their first year. Mr. Andrew Lang tells of the widow of an Irish farmer in Derry who, not so very long ago, killed the horse that belonged to her deceased husband. When someone remonstrated with her she said, "Would you have my man go about on foot in the next world?" It seems that there exists in this locality a belief that a faithful horse will find

its master if permitted to follow him into the next world. A fragment of a myth, undoubtedly, which found its way into the folklore of the people. Incidentally, it is notable that both in England and in the United States the horse of a dead soldier or distinguished person is usually led behind the coffin to the grave.

It was found necessary in tracing back to their source the manners and customs of man, to study the folklore and mythology of all countries, of all peoples. And you shall see in the pages that follow how both these factors—folklore and mythology—influence in a thousand little ways the things we do and say to-day. They are like mighty links, forged in the furnace of time, binding even us of the twentieth century to a chain of tradition that reaches far back into antiquity.

The Sacred Writings.—When we search the sacred writings as a source of information concerning primitive man and his mode of living, we have reached at last a written history. No longer is it necessary to depend upon archæology, upon folklore and mythology and oral traditions for our facts. We are now able to read what the people wrote about themselves, about their neighbours, about their customs and beliefs.

As you know, the world existed for many generations without a word of history being written—history, that is, as we interpret it to-day. Oral history was carried by word of mouth from one generation to another—a method of instruction, strangely enough, referred to in the Bible:

Tell ye your children of it, and let your children tell their children, and their children another generation. (Joel, I, 3.)

The oldest existing sacred writings are, perhaps, (with the exception of those from which Moses compiled the earlier chapters of Genesis) the Vedas. These are the sacred books of the Hindus. In the Vedas we find a picture of the simple nature worship of the people of India in their early history.

Moses, as the first historian, teaches us a great deal

concerning the manners and customs of man in the era preceding Christianity. He wrote about 1500 B.C. He wrote for his people and of his people—and of their neighbours in other lands. He built history with the bricks of human nature—and each one of those bricks is pure gold to the student who turns back the pages of the past and reads in the story of life.

To Moses we are very largely indebted for the preservation of the tale of man's creation. Moses—the teller of tales, the leader of men, the prophet, the historian—wrote for future generations to read the inspired tale of the beginning of man.

From 1500 to 500 B.C. the writers of the Old Testament are the only historians. They wrote as though inspired, as probably they were. And though their pens were dipped frequently into the wells of fancy and imagination, these writers wrote truthfully of many things and they give us an excellent picture of the life of their period.

There are other sacred writings from which we glean information concerning man and manners. The Talmud, a commentary on the Bible, clears up many doubtful points. It took many rabbis many years to write the Talmud, explaining in detail the laws of the Bible and making it easier for the Hebrews to understand and follow the laws brought them from the Mount by Moses.

The Scandinavians have some very beautiful myths and legends, preserved for many generations by word of mouth but set down at last in their sacred writings. The Romans have some rare old writings on sacred subjects, as have also the Egyptians. An earnest attempt has been made to investigate all existing sacred writings and obtain from them whatever material would prove valuable in the preparation of this work.

These, then, have been our sources of information. We have studied the relics of other ages as brought forth from the bowels of the earth by the archæologist. We have studied prehistoric man—not as a fossil or a museum

exhibit, but as he must have lived and laboured in his daily life. We have followed the threads of tradition into many lands, over vast periods, through labyrinths of folklore and mythology; and we have extracted from these journeys some startling facts which long lay buried beneath the intellectual débris of the generations. And we have delved into the sacred writings for information, coming at last upon written history and its wealth of valuable facts.

We have, in a word, worked our way behind the scenes of life, beginning with the prologue and going through the three great acts, or ages—barbarism, mediævalism, and modernism. The finale is left to the future.

WHAT IS SOCIETY?

The word "society" taken in its fullest sense means people as a whole—human beings. We are all members of society. Only the hermit or the outcast on a desert island can claim exemption.

By his very nature man is gregarious. He may, if food is scarce, eat furtively and alone in some corner; but when his appetite is satisfied and he comes from his hiding place to sit before the fire, he wants some of his own kind near him. After all, isn't this true of all nature? Birds fly in flocks, bees in droves, locusts in great swarms. Sheep herd together, and wolves gather in packs. Nature has created separate species and has instilled in each a liking for its own kind.

During the greater part of prehistory, man had no real social life, owing to the organic struggle—the material struggle for existence. He looked upon his nearest neighbour with fear, suspicion, distrust. He guarded his food and glared at any one who dared approach it. If there was a woman in his cave he watched her too, and probably growled if she so much as attempted to take more than her allotted share of food.

Under circumstances such as these there could be no social life. Man depended not upon humanity but upon

nature. The berry tree was of more importance than the man who sat a little distance away before his cave fire.

But nature proved treacherous. There were wild beasts who made it unsafe to search in the woods for berries. There were other, stronger savages who stole the food supply from the cave while the owner was gone—and perhaps carried along the woman, too. There were droughts and winds and storms. To fight enemies such as these, strength was needed. And when primitive man discovered that two were twice as strong as one, he saw the great value *to himself* of joining forces.

Thus did society rise out of the oldest human instinct—self-preservation. If two were twice as strong as one, how very strong five must be! Indeed, five could easily overcome Strong Arm who so persistently stole food and women. Yes, it was a good idea to join forces with one's neighbours.

And so a certain social cohesion entered early life. In regions where the climate is severe and the environment inhospitable, this social instinct came early. Men needed one another. But in the tropical jungles where food of some kind or other is practically always attainable, it developed slowly.

When man began to clan together there was probably always one head clansman, or leader—the strongest and most powerful man among them, no doubt. It was to him that the food supply was brought for distribution, to him that all disputes and problems were brought for solution. Since he had more skins than the others, since he was more powerful and more to be feared, he was treated with a certain amount of deference.

Naturally, there were outcasts in early society. The weak, the sick, the timid, the blind were ostracized. They hindered rather than helped the clan. They were, one might say, “at the bottom of society.” But the tall, strong, powerful man, on the other hand, belonged to the “favoured class.” He could club an enemy to death. He could fling a huge beast over his shoulder and carry it to

the cave. He could steal a woman from some other clan. He was at the very "top of society."

A thousand external circumstances have been moulding and shaping society since the time of the head clansman. To-day the word society still means human beings, people, but it is generally associated in the mind of the multitude with caste, class, position, wealth. This will be taken up more definitely in a later chapter.

THE EARLY THOUGHT STAGES

History divides times into ages, or stages, of development. There are the four Glacial Ages which are estimated to extend from 500,000 to 35,000 B.C. There are the Palæolithic (Old Stone) Age and the Neolithic (New Stone) Age. There are the great Bronze Age and the Age of Iron.

But the writer on the manners and customs of man finds it advisable to divide time into thought stages. As we study prehistoric man we see reason struggling everywhere to exist. We find man groping about in his crude and child-like way for a reason for things. Freed from the material struggle for existence, he began to think; and it was then that he laid the foundation upon which civilization was later to be built.

The first mankind was, of course, in the lowest status of savagery. There was no articulate speech. There was no knowledge of fire. There was no defence against animals. Restricted necessarily to tropical territories, these early men subsisted upon raw nuts and fruits.

To this writer it would seem that the first great thought stage centred about the discovery of fire. This discovery certainly represents one of the greatest strides forward in primitive life. Man was able to extend his habitat. He was able to include flesh and fish in his dietary. He was able at last to leave the forests and wander along the shores.

The power of fire was probably made known to man

through the conflagration caused by lightning, or through the spontaneous combustion of vegetable materials in a state of fermentation. Living craters, belching fire; or the accidental striking together of two flints, producing a spark which caused a conflagration, may have revealed the secret. No one can know for certain. We do know, however, that man, exercising his power of thought, learned the use of fire and so took a step ahead in process of evolution.

The next great thought stage brought forth implements of defence against wild beasts. It probably took thousands of years for our ancestors to reach that point of intellect which made it possible for them to take the sinew of an animal and use it as a cord to fasten a sharp flint to the end of a stick. That gave them a tooth longer, sharper, and more powerful than the tooth of any animal in the jungle. It enabled man to stab an animal from an overhanging branch, himself in safety.

It is quite probable that primitive man learned of flesh as food by devouring dead animals, or appropriating half-eaten animals left behind by some gorged beast. Now, with the flint implement born of his thought, he was able to kill animals himself and thus be assured a new and valuable food supply. With an implement to kill his animal, and a fire to cook the flesh, he was two great steps in advance of the earliest brute man who wandered in the forests before him.

The flint-tipped spear gave way to the bow and arrow—still in the great thought age which provided man with a means for defence and a means for increasing his food supply. The bow and arrow made it possible for man, the two-legged animal, to bring down birds from the air, to shoot enemies at a distance, himself unseen, to kill any beast in the jungle, no matter how powerful. He could provide himself not only with food but with skins and materials for his home. And this great discovery, which made man king of the jungle, came out of *thought*.

Nature, you remember, proved treacherous to primitive man. There were sunshine and gentle rains; but there

were also droughts when there was no water to be had, storms when one could not venture forth for food, seasons when the animals disappeared and he was faced by starvation. If only food could be preserved in time of plenty. If there were only some way to keep surplus food supply for a time when it would be needed.

Groping about for some solution to this problem, man entered the next great thought stage, which developed into the creation of the first crude pot. This marvellous discovery made a great advance upon social conditions. Man, with his new pottery, was able to store away foods for time of famine. It is barely possible that he utilized his new pots as cooking utensils, in which case they exerted a civilizing influence.

The next great thought stage is associated with the domestication of animals and the use of irrigation in cultivating the soil. The dog was probably the first animal to be domesticated. Whether consciously or not, man exercised great judgment in domesticating the dog, as without it there could be no guardianship of the flocks, no faithful watchman of the herds.

In quick succession there followed the domestication of the sheep, ox, camel, horse. Man became a herdsman. Milk was added to his dietary. And using both ox and horse to help him, he began to plough the ground and prepare it for agriculture.

One can readily see the tremendous influence this great thought stage must have had upon man—upon society. Home came to mean more than just a rock shelter. Pride of possession was born. And man learned the great lesson of industry. The brute man gave way to a newer, finer man who worked and dreamed and thought; a man who recognized his family ties, no doubt, and his duties not only to himself but to society—to the people who lived with him and near him.

From this period onward there appears to have been progress in many lines and a multitude of minor arts and

practices were developed. But for the next great thought stage we would select that era in which man's wonderful mind conceived the art of smelting iron. It now became possible to build houses, to make powerful tools and implements, to wall in cities as a means of protection. Nature created iron, but the thought or the mind of man took this iron, smelted it, shaped it into usable form and employed it in a thousand marvellous ways.

Having reached this thought stage, primitive man has a certain civilization. But as yet he has no means of communication. He is unable to make known his ideas or thoughts either to his own people or to his neighbours. The breaking down of this barrier brings us to the next great age of thought in the evolution of man.

Graphic signs were invented for the purpose of symbolizing events and making even the most abstruse ideas tangible. Systems of writing, crude but understandable, were developed. Man achieved a conquest over time—he was now able to transmit by written word the record of his deeds and thoughts to remote posterity.

And so, through many great thought stages man developed into a reasoning creature. Although it was not necessary for primitive man to think beyond the actual and immediate necessities of life, this first enforced thinking stirred man's remarkable brain and set both mind and imagination in motion. It was this power of thinking, of reasoning, of planning ahead, that separated man in his infancy from the lower beasts and made him a conqueror wherever he wandered.

PRIMITIVE IDEAS OF CREATION

In studying the early thought stages of man, it is interesting to notice the various myths or stories of creation that were evolved in the primitive mind. For thousands of years before the rudest kind of picture writing was invented, the mind of man was busy speculating as to where

he had come from—even as some of us to-day are still asking whence we came and whither we are going!

The legends of a beginning, of a first man, of a creator of things, were without doubt created in the imagination of some tribal "wise man" and handed down by oral tradition through one generation after another. There may have been a little fact mixed up with the fiction—a natural phenomena, perhaps, or some strange coincidence. But the legends, after much repetition, came to be regarded as truth. Instead of being set down as fancy born in the mind of man, they were set down as history to be taught and believed. We find these myths still lingering among certain tribes and peoples. As with custom, we do not readily give up the old for the new.

It is said that in Australia stories of the flood are exceedingly common among all the tribes. There is one tribe that has a tradition a little different from all the others. Members of it tell the traveller that once a long time ago, *they* had a wonderful hunting ground on the banks of a river where game was plentiful and where the members of the tribe could hunt in safety. Some protective spirit pervaded the place and none of their number was ever killed. But one day when the men of the tribe went to the old hunting ground they found that one bank of the river had disappeared and the sea was flowing in. And the animals had somehow grown scarce; very little food could be found. The men instantly interpreted this as an omen, a warning and they quickly deserted the spot.

One can see precisely what happened in this instance. The river was probably swelled by recent storms and overflowed, meeting the sea. The animals, very naturally, went further back into the forests where they would be safe. But the primitive mind would not have been satisfied with so simple an explanation. Supernatural powers must have had something to do with it!

There are, of course, many variations of the flood or deluge story. The Eskimo believe that the souls of the

dead are encamped around a large lake in the sky which, when it overflows, causes rain upon the earth. If at any time the floodgates should burst, a universal deluge would result. They believe also that at one time the world had been tilted over and all men drowned except one. To prove this they tell of the bones of whales which were found on their mountains.

The Mandan Indians have a deluge myth. According to Catlin, they celebrate every year in elaborate pantomime the subsidence of the great waters.

The Minnetarrees of North America believe that at first everything was water and there was no earth at all. Then the first man, the "Never-Dying-One" who is known also as the "Lord of Life" sent a great red-eyed bird down into the waters to bring up the earth. What a huge bird he must have been to bring up the earth in his beak!

The Delawares of North America imagined that at one time they all lived under one great lake where they would still be living to-day if one of their number hadn't discovered a hole through which they all crawled, reaching the surface of the earth at last.

Not all of the North American Indians have deluge myths. Their notions concerning creation are much diversified. Many tribes believed that their ancestors existed within the bosom of the earth, sometimes in human shape, but more often in the form of the rabbit, the woodchuck or the tortoise. These animals were revered by the early tribes.

The Mandans had a tradition that they lived at one time in a great cavity of the earth. One day, one of their young men climbed up the side of the cavity to the surface, by means of a slender vine. Delighted with what he saw, he returned and told his people of the upper world. There was an immediate rush to the vine and the people began to clamber up to the surface. Some reached the top, but one careless person gave the vine a wrench and it fell to the ground. There was no further means of escape. Those

on the surface established a Mandan village; those in the bowels of the earth continue there to this very day.

The Abipones of South America believed that they had been created by an Indian like themselves. They spoke of him as "grandfather" because he lived so long ago. They fancied that he could still be seen in the Pleiades. Thus, when that constellation disappeared from the sky, they bewailed the illness of their grandfather, their creator. And when he reappeared in May there was feasting and merry-making.

The Greeks, always artistic, have a beautiful tradition concerning the origin of man. They represent Prometheus as moulding the first human beings from clay and giving them life by means of fire stolen from heaven. The Mandans, mentioned above, had a similar tradition. They believed that the Great Spirit formed two figures of clay which he dried and animated by the breath of his mouth. To one was given the name "First Man," to the other, "Companion."

It would be tiresome to allude to the many creation myths which have come down to us. But it is increasingly fascinating to the student to read these myths, and while reading marvel at the almost limitless power of the human imagination.

DAILY LIFE OF PRIMITIVE MAN

Let us now conjecture what daily life was like in primitive times. Perhaps we can steal quietly beside some rough-hewn cave and peer in upon the inhabitants.

See, there is a huge flat rock right in the centre of the cave—a "table," you will probably call it. There is a fragment of rock beside it, and on this a woman is sitting. Do not be afraid. She cannot see you. She does not know you are here. You belong to one age, she to another. Study her carefully, for you will meet her many times in the pages that follow.

Clothing she has none, unless you count the necklace of

claws strung around her neck. Her hair is heavy, coarse, knotted. Her hands and feet are large and powerful. She is gnawing at a bone—her dinner.

Glance quickly around the cave. You see those bright stones and shells? Probably a crude attempt at decoration. And there are some implements of bone—knives, fish hooks, arrows, even needles. That hole in the ground is for food. Between alternate layers of hot cinders are placed eels, herring, oysters—and over all a layer of fir branches. There are also nuts, cherries, and plums stored away somewhere.

Sssh! Here comes the master of the cave. Step aside while he enters. What a fierce, brawny fellow he is! He is carrying a carcass on his back. His hair is coarse and matted, like the woman's. His limbs are heavy and powerful. He looks as though he could crush us all like eggshells. He is very proud of that string of claws, teeth, and bits of carved bone encircling his waist, because he made it himself in the long evenings before the cave fire.

He is in the cave now, showing off the carcass to the woman, boasting, strutting about and beating his chest in his arrogance. Let us leave them for a moment and investigate the outside of the cave.

That rock at the entrance is for protection. At night it is rolled over against the hole to keep out prowling beasts, and the still more dangerous prowling human beings. If an enemy approaches during the day one of those smaller rocks is hurled down the hill on top of him. A safe home, this cave.

The huge heap behind the cave is merely a refuse ground. Here all the *débris* is thrown, sometimes not only from one cave but from many caves.

Does this give you a fair picture of primitive man in his daily life? These cave dwellers, you know, belong to a higher order of development than the brute men who wandered through the jungles from one place to another. They came only after the lapse of long ages of geologic change.

Neanderthal man, from a painting by Charles R. Knight.

The first "home" was the place where primitive man brought his game when he killed it, ripped off its hide, made his flint implements, slept, ate, and lived. It is easy to suppose that the family tie was soon recognized instinctively, though in a crude and savage fashion. The attachment between the sexes is an instinct deeply ingrained in the human soul.

The tools and remains of these early cave people are found scattered over a large part of the surface of the globe. Vast numbers of stone implements, shaped by the hand of man, have been unearthed. These tools and implements and "household appliances" give us a definite clue to the wild state of those who made them—give us an excellent insight into daily life as it must have been in those days.

We know that man in the prehistoric centuries was a savage hunter, armed solely with weapons of flint and bone, living in nature-made homes such as caves and grottoes. He frequented the lake and river margins, always remaining near enough the forests to hunt his food. Perhaps he hunted and fished alone, carrying the spoils to his cave and dividing them with the woman and the children who shared that cave with him. But it is not improbable that two or more would hunt or fish in company for the sake of advantages thus obtained in coping with larger game and withstanding the attacks by those who wished to rob them of their spoils.

FEAR AND SUPERSTITION

You know how afraid children are of the dark. It makes no difference whether the child is a little pickaninny on some Southern plantation or a blustering little German fellow on his father's farm. If it is late and there are strange noises, or even if it is absolutely silent the child whimpers and looks around for the consoling companionship of a grown-up.

•

So it was with all mankind in the dawn of prehistory. Men were like children lost in the dark. They wandered alone and afraid in a land fringed with forests, haunted by huge beasts of prey; a land shrouded sometimes in the darkness of storms, blinded at other times by terrifying shafts of lightning. "Survival of the fittest" was more than a catch phrase in those days: it was the first law of life.

Is it any wonder that men feared, and that out of their fear grew vague superstitious notions? The wonder is that these superstitions have survived and that many of them are observed now, in an age of supposed enlightenment.

William J. Fielding says:

The first emotions a child has are those of fear and surprise. Before we have the power to love or hate or comprehend, we are *able to be afraid*. This conforms to the defensive reactions of mankind's remote prehuman ancestors, who were protected by this prompting to fear and flee from ever-alert enemies.

What primitive man did not understand he feared. And there was much that he did not understand. The sun and the storm, the breeze and the calm were miracles. The uprooting of a tree by the wind was the act of some evil spirits. The stars were magic eyes that saw everything, and the moon was a god—silent and majestic.

In his fear primitive man entered a state of superstitious bondage. The thunder, the tempest, the sudden attack of mysterious illness, the earthquake, the forest fire—these were more to the primitive mind than the mere natural forces working out their natural destiny. They were evil spirits, and dragons, and powers to be propitiated.

Man particularly feared illness and death. He did not understand them. Why should a man lie suddenly stiff and cold and silent, when no one had harmed him, when no beast had attacked him? Surely it must be due to the evil spirits.

The Navajos, for instance, ascribed death to the devil, Chinde. When death came to the Andaman Islands, the

inhabitants shot arrows into the jungle to frighten away the spirits. The Veddas deserted their cave homes whenever any one in them died, as did also the Austrian Black-fellows and other savage hordes. Death was something alien to life and to the living; thus it was formidable and to be feared.

Many savage races even to-day do not believe in natural death, and if a man, no matter how old, dies without being wounded, they believe him to have been the victim of magic. Out of this belief has grown the custom of "sucking out the evil" which exists among savage races all over the world. When a man is ill, he attributes his sufferings to some enemy or evil spirit within him—the spirit which ultimately will cause death. Therefore the lips are applied to that part of the man which is affected and the evil is "sucked out."

This method of treatment is used among the savages of Paraguay and Brazil, among the Eskimo and Indian tribes, among the savages of Australia, South Africa, and elsewhere. Sometimes the witch doctor, or the medicine man, is called in to do the sucking-out, and instances have been recorded when the medicine man extracted a bit of stone or other substance from his mouth and declared that it was the evil that had been causing all the pain!

The age-old nursery remedy of "Kiss it and make it well" is probably a lingering fragment of the custom of "sucking out evil." It seems a natural instinct to put a hurt finger or bruised arm to the lips.

Mr. Harris in his "Life of Charles I" says:

Everyone knows the mischief superstition has produced in the world; gods of all sorts and kinds; sacrifices of beasts and of men; rites, ceremonies, and postures; antic tricks and cruel torments; with every other thing which, from time to time, has been falsely called by the name of religion, has arose from hence. It took its rise early in the world, and soon spread itself over the face of the earth; and few, very few, there were who were wholly free from it.

The first note in all superstitions is, of course, ignorance—an ignorance to which fear is closely allied. The true

•

origin of superstition is to be found in primitive man's efforts to explain the phenomena about him; his wish to avoid evils he could not understand; his desire to propitiate fate and invite fortune; his attempts to pry into the future.

Being contagious, superstition quickly spread everywhere. What one man feared and suspected, his neighbour was bound to fear and suspect. And once a superstitious notion has taken possession of a people, it is the hardest thing in the world to shake it off.

Egypt, even at the height of its glory, even in its pioneer civilization, was a land steeped in superstition. The people believed in sorcery and in magic. No unexpected happening, no coincidence, was accepted as natural and proper. Some meaning was instantly attached to it.

Nor did Christianity dispel this bondage. The Church has itself been a fountain-head of superstition. There is, for instance, the reason given for the trembling of the aspen leaf which, you know, is proverbial. Christ is alleged to have been crucified on aspen wood. Because of this the boughs of aspen trees have from that time "been filled with horror and trembled ceaselessly." This curious myth is actually accepted as truth by many people.

America, having blazed new trails, having built for herself a world within a world, is curiously free from many of the superstitions of the Old World, yet many customs here in America are tinged by primitive belief. It is interesting to see how widely we have deviated from the original meanings of certain customs and superstitions; yet we observe them slavishly, without question.

There very frequently crops up, even in this advanced twentieth century of ours, an example of superstitious reasoning of the kind which fostered the Salem witchcraft delusion. The newspapers, which every morning spread history before millions of people, have a great deal to do with it.

Lord Carnarvon, searching a royal Egyptian sepulchre in quest of funeral treasures that will reveal new secrets of

early man, is bitten by a poisonous insect and dies. Instantly the whole world encouraged by the newspapers becomes interested, digs up interesting but obsolete superstitious facts, and boldly declares: "Lord Carnarvon had to pay the price each one pays who dares to touch the Oriental dead."

Reasoning people recognize this as a bit of superstitious nonsense, of course, but not so the multitudes. People put their heads together and whisper that there must be some truth in it. And why? Just because it is man's age-old heritage to fear that which he does not understand, to attribute to some evil power that which he cannot otherwise explain.

And yet, what would modern life be like if we were robbed of all our superstitions? Isn't superstition—harmless superstition—a sort of luxury for the imagination? We would hate to think of a wedding without the handful of rice; of a Hallowe'en without a secret wish before the mirror; of a four-leafed clover that would not bring good luck!

Not even civilization's greatest thinkers have been free from superstition. Rousseau imagined that a phantom walked continually by his side. William Blake, poet, mystic, and artist, insisted that he was a brother of Socrates and that he had talked with Christ. Sir Walter Scott would not visit Melrose Abbey by moonlight because of the superstitious notion that bogies were there. Napoleon was afraid of black cats. Peter the Great had a horror of crossing bridges. Cecil Rhodes would never try on new clothes because of the superstition that to do so would bring ill luck or disappointment.

Thus has superstition, born of the fear and ignorance of primitive man, found its way into all countries and among all peoples, goose-stepping through the ages side by side with civilization, not only creating custom but helping it survive.

•

THE AGE OF DREAM INTEREST

The great philosopher Nietzsche says :

In our sleep and in our dreams we pass through the whole thought of earlier humanity. I mean, in the same way that man reasons in his dreams, he reasoned in the waking state many thousands of years. The first *causa* which occurred to his mind in reference to anything that needed explanation, satisfied him, and passed for truth. In the dream this atavistic relic of humanity manifests its existence within us, for it is the foundation upon which the higher rational faculty developed. The dream carries us back into earlier states of human culture, and affords us a means of understanding them better.

People have always been interested in dreams. To the savage mind the dream was a symbol, a sign. We to-day ponder over our dreams and search them for a meaning. We like to believe that the dream is a prophecy, or a warning, or a sign of some kind.

If we could but glimpse behind the histories of nations and the lives of individuals, we would find that dreams have played a conspicuous part in their destinies. Like superstition, dreams early appealed to the imagination of men, and it is now believed by authorities that the elaborate conceptions of mythology, folklore, and tradition are the day dreams and night dreams of young humanity, blended together into beautiful, complex tales.

It is interesting to contemplate the primitive man or woman, curled asleep by the fire, dreaming dreams and seeing visions. What did he dream of? What did he see? His spirit—some part of him—seemed to separate from his body and soared away to some beautiful spot where he joined old friends who were dead or lost. And with them he did the fascinating things we all do in our sleep.

And when he awoke he found himself once again at his fireside, alone, with nothing more tangible than the memory of his dream to prove that he had seen his friends at all. How amazed he must have been! And startled, perhaps, that so extraordinary a thing should have happened to him. Of course, he told his friends and neighbours of his strange

adventures, and they told him of adventures they too had had in sleep. They must have thought about it and discussed it with one another; and finally they came to the conclusion that the people in their midst who died (and whom they saw in dreams) were not really dead but had merely departed to another more beautiful world. Man for the first time felt that he had a spirit that could quit the body.

Bad dreams, following too much meat, perhaps, and nightmare with its equivalent horrors, probably brought about the belief in an underworld of bad spirits. Thus man came to have a heaven and a hell of his own imagining, way back in the dawn of civilization. We can scarcely realize what an importance even the simplest dreams had to the savage. They were to him reality; the events that took place in them were to him as real as those that took place in his waking hours.

We can easily see how the man who dreamed a great deal, and who filled in the gaps in his stories with facts of his own imagining, was looked upon with awe and reverence. Men listened to him for hours, and if he warned them against hunting in a certain district or eating a certain food, they heeded his warning. He became a sort of magician, a mystery man, a priest.

In Madagascar even to-day the people throughout the whole island pay a religious regard to dreams. They imagine that their good demons tell them in their dreams what ought to be done and warn them of what ought to be avoided. And have we not books right in this country that portend "to interpret the dreams and visions that come to you in sleep?"

It is no exaggeration to say that dreams have profoundly influenced the customs and manners of man. Not only did man first conceive of a soul—of a detached spirit—in dreams, but since the earliest times man has associated his dreams either with divine or diabolic inspiration. The influence of the dream will make itself felt in many of the customs that are later to be discussed.

•

SYMBOLISM

Someone once described early life as a "succession of symbols." Everything seems to be a meaning or a sign for something else. Every happening, no matter how trivial, seems a warning, or a prophecy, or a sign. A symbol is a sign; symbolical pictures and ideas are a language—the natural language of primitive man and of our own primitive personality.

Symbolism, as a language, is universally understood. To dig a hole in the ground and bury one's hatchet or knife is instantly interpreted as a sign of friendliness, of peace. "Burying the hatchet" therefore becomes a symbol of friendliness, just as smoking the peace pipe with the Indian is a symbol of friendliness. Similarly, closed lips mean silence, and when we wish someone to remain silent we place our fingers to the lips as a symbol of silence. The black cat is recognized as a symbol of evil and disappointment because witches at one time were supposed to use black cats in their divinations.

The whole fabric of religion is held together by symbolism, as we shall later discover. Because lightning flashed down upon the earth in a snakelike zigzag, the early Egyptians worshipped the snake or the serpent. The sea, in early life, served to symbolize the great gulf between life and death. And the fish, because it is able to reach both shores, has for centuries been a most sacred symbol in Christianity. Salt, too, became a symbol of sanctity; not only because it has a preserving power but because the sea is salt. Even to-day holy water is salted.

In the creation of custom, symbolism has played a conspicuous part. In prehistory when one savage fellow met another with whom he did not wish to fight but with whom he wished to join forces, he dropped his weapon and extended his right hand—his weapon hand—as a symbol of friendliness. The original meaning and purpose of this symbol has long since passed into forgetfulness, but we still extend the right hand as a sign, or symbol, of welcome.

doctors who attempted to wring showers from cloudless heavens, medicine men who sucked illness from the body and sent the evil spirits scurrying through magic incantations, sorcerers who played upon the child-like, credulous minds of the multitudes.

Controlling the Elements.—Magic might be defined as an elementary process of reasoning. Primitive man did not understand the storm. He was afraid of it. Therefore he shot poisoned arrows at it to drive it away. The Namaquas particularly feared the storm and considered it an evil spirit who had come to harm them. They would gather together and shoot their arrows into the sky, certain that the storm would become frightened and leave. They combated the storm as they would any human enemy.

Many primitive tribes believed they could control the wind, make it blow or be still, according to their wishes. There were many elaborate ceremonies for this purpose. In New Britain when a sorcerer wished the wind to blow in a certain direction, he threw burnt lime into the air, chanting a weird song. If a Hottentot desired the wind to stop, he took one of his fattest skins and hung it on the end of a pole in the belief that by blowing the skin down the wind would tire itself and lose all its force. Travellers tell us that this custom still exists among certain Hottentot tribes.

The Payaguan Indians of North America feared the wind that threatened to blow down their huts. Whenever a fierce wind blew down upon them, they rushed against it with firebrands, believing that in this way they could stop its flight.

In his book, "Die Völker des östlichen Asien" (vol. IV, p. 174), Bastian tells of a pass in the Peruvian Andes known as Andahuayllas where one can see two old iron rings, each on a great ruined tower. The towers stand on opposite hills, and in days gone by it was the custom to stretch a net from one tower to the other by means of the iron rings. The purpose of the net was to catch the sun.

•

Why they should have wanted to ensnare the sun we do not know and can only guess, but the fact remains that they actually did attempt to catch it and built tall towers for this very purpose.

The Bank Islanders have a unique method of "making sunshine." They take a very round stone, called a *vat loa* or sunstone, wind red braid about it and stick owl feathers in it to represent the rays. Singing the proper magic spell, they hang this mock sun in a high tree. No matter how dark and cloudy the day may be, the sun is expected instantly to make its appearance.

Making Rain by Magic.—In torrid climates where rain is of extreme importance it has been an age-old custom among savage tribes to "make rain"—that is, force rain to fall through magic and sorcery.

In Halmahera, near New Guinea, there is a ceremony for making rain in which a wizard appointed by the people plays a conspicuous part. He takes a branch from a certain kind of tree and dips it in water. Chanting magic words, he scatters the moisture from the dripping bough over the ground. Rain is expected to follow. If the rain does not follow, it is the wizard and not the method that is blamed.

Mock thunder and lightning form part of the rain charm in Russia and Japan. In a village near Dorpat, in Russia, when rain was wanted it was at one time the custom for three men to climb into the fir trees in an old sacred grove. One drummed with a hammer on a kettle or cask to imitate thunder; the second made sparks fly by knocking two fire-brands together and thus simulated lightning; the third had a bunch of twigs with which he sprinkled water from a vessel. All phases of a rainstorm were imitated in the firm belief that an actual rainstorm would be precipitated.

It was the custom of the natives of the Japanese Alps to climb to the top of Mount Jonendake, one of the most imposing peaks in the range, and roll down great masses of rock as part of their ceremony for rain. They also built bonfires on the cliffs in crude imitation of lightning.

•

The Zulu rain doctors, on the other hand, had a ceremony for frightening lightning from the sky. They themselves were afraid of it; through magic they tried to make the lightning fear them. The rain doctor stood alone on a small mound, a branch of some tree in his hand, and whistled into the sky. The lightning, hearing his magic whistle and seeing the staff in his hand, was supposed to become frightened and run away.

The Greeks and Romans, like other peoples, sought to obtain rain by magic. Even to-day, when a drought has lasted for a long time it is customary for the Greeks in Thessaly to send a procession of children to all the wells and springs in the neighbourhood in a picturesque ceremonial for the purpose of inviting rain. At the head of the procession walks a pretty girl, adorned with flowers. At each well she is sprinkled with water while all the other children sing magic rain hymns. A similar custom is observed in certain sections of Bulgaria and Roumania.

In Arcadia, when the corn and trees were parched with drought, the priest of Zeus dipped an oak branch into a spring on Mount Lycæus. The water, troubled by the branch, sent up a misty cloud from which rain fell upon the land. One sees here the early gropings of primitive science, seeking for a means of expression.

It was mainly in torrid countries, and in lands where droughts frequently occur, that rainmaking was practised. In the tropical island of Java where there are rainfalls in abundance, ceremonies for the making of rain are unknown. But it is interesting to observe that there are ceremonies for the prevention of rain. The rain doctor of Java exerts his professional powers in regulating the behaviour of the rain clouds.

A curious mixture of religion and sorcery, of sacrifice and magic is evident in the rain magic practised by the Athenians. To avert drought and dry heat, they sacrificed meat to the seasons. This meat was boiled, not roasted as ordinarily. The Athenians probably conceived in some

•

dim way the idea of transmitting water to the deities through the meat, which had been boiled in water, and that it would be sent down to them again in the form of rain.

Punishing the Deities.—In savage life, and this is true even of existing savage races, deities are created for the sole comfort and pleasure of man. They are expected to do man's bidding. They are feared only in proportion to the amount of coincidence which has made them seem powerful.

Therefore, it was quite customary among savages to punish recalcitrant deities and gods. In several Japanese villages it was the custom to destroy the image of a god and hurl it ignominiously into the parched ricefield, if it remained deaf to the pleas for rain. The Chinese used to make a dragon of paper or wood to represent the rain god, and carry it around in procession. But if no rain fell, the procession ended in the tearing to pieces of the mock dragon. The Feloupes of Senegambia, even to-day when they want rain, are in the custom of dragging their fetishes around the fields until rain falls.

Sir James G. Frazer in his most fascinating "Golden Bough" tells an interesting story concerning this custom of punishing disobedient gods. He tells us that about the year 1710 the island of Tsong-ming, which belongs to the province of Nanking, was afflicted with a drought. The usual attempts were made to soften the heart of the local deity by burning incense sticks and making offerings. But when these attempts proved futile, the viceroy of the province became impatient and sent word to the idol that if rain did not fall by a certain day, he would have him turned out of the city and his temple would be destroyed.

The threat had no effect. The skies remained cloudless. And the enraged viceroy ordered the temple shut up and the doors sealed. The people were forbidden to make offerings of any kind to the obdurate deity. This seemed to have the desired effect, for rain began to fall soon after, and the god was reinstated!

•

It is amusing to note, in this connection, how very careful the early Greeks were to keep their gods sober. They made it a rule to pour honey, but never wine, on the altars of their sun god. They realized how much depended upon this god, and how important it was that he remain strictly sober.

The Uses of Imitative Magic.—By the term “imitative magic,” used frequently by Sir James G. Frazer, is meant the working of magic by means of images. Thus, among the Battas of Sumatra, if a woman wants a child a doll is made of wood and this the woman holds in her lap while the wizard chants some magic words to induce birth. The wooden image of a child is used by many tribes in magical ceremonies to induce childbirth.

Some authorities refer to this type of magic as “mimetic magic.” It is based upon the principle that like produces like. The most widespread and familiar use of this type of magic is in harming or destroying enemies by making images, or effigies, of them, and injuring or destroying the image at will.

The Malays believe that the most effective method of causing the death or illness of an enemy is to stick a pin into the heart of a wax figure or image of him. If he wishes to cause dissension between a husband and wife, the Malay makes two wax figures resembling them, breathes upon them and puts them on a shelf back to back. He imitates in effigy what he would like to happen in reality. This custom is still observed among the Malays.

The Ojibwa Indians have a similiar custom. They believe that as the image suffers, so does the man. A world-wide superstition of the civilized races to-day is that a magic sympathy exists between a man and any severed portion of his person. We often hear a man whose arm or leg is amputated complain of pain in the missing member. This would appear to be a remnant of the imitative magic of other days.

Regarding the Ojibwa Indians, a wooden image of the

enemy is made and a needle is run through its head or heart. The belief is that the person against whom this magic is directed will be seized with pain. If it is intended that the enemy be killed, the image is burned or buried, magic words being uttered over it.

The savage has a superstitious dread of the magic words used in the ceremonies for injuring or destroying enemies. These words, used in imitative magic to wreak vengeance or destruction upon an enemy, correspond to nothing in modern life so much as the curse. The modern man of primitive personality will curse his enemy, and will feel relieved and satisfied at having done so. Isn't this a survival of imitative magic?

The man of to-day who is roundly cursed by some enemy will probably shrug his shoulders and grin; but not so the savage against whom a magic curse is uttered. So dreaded were the words directed against the person whose image was destroyed in savage life, that men and women have actually been known to die of fright. This was a form of psychology unconsciously employed by the savage mind.

Imitative magic was early used in hunting and in sowing. In the Interior of Sumatra it is a custom among the women who do the sowing to allow their hair to hang loose. The purpose of this is to induce the rice to grow luxuriant and have long stalks. In ancient Mexico it was customary to give festivals in honor of the goddess of maize. During the festival the women wore their hair unbound, shaking it and tossing it in the dances, the pantomime being a subtle plea to the goddess to make the tassel of the maize grow as profusely as the women's hair.

In British Columbia, if the fish do not come in due season, the Indians have a wizard make an image of a fish which is placed in the water with great ceremony. Care is taken to place it in the direction from which the fish are expected to come.

A missionary who spent two years in British Columbia tells of an occasion when he actually witnessed this primi-

tive type of imitative magic. The Indians of this region subsist largely upon fish. There was a great scarcity of fish during one particular season, and the Indians could not understand it. Formerly, at that particular season there had always been an abundance; now there was practically none. They had a long conference and finally came to the conclusion that magic was needed to induce the fish to come.

Accordingly, they made a wooden image in the form of a swimming fish and with much ceremony placed it in the water. The following day there was a terrific rainstorm, and when the rains cleared away the fish began to come in vast numbers. It seems that some obstruction upstream had held them back, and that the rain had removed this obstruction. The missionary, having proved this later to his entire satisfaction, tried to explain it to the Indians. But they refused absolutely to reason. They were mad with joy. They had practised magic, and the magic had worked. They made huge wooden images and placed them as offerings in the water. So it has always been: civilized man seeks for a cause; savage man accepts without reasoning.

In the "Golden Bough" Sir James G. Frazer tells of a tree in Central Australia which is known as the Blind Tree. The natives have a tradition that this tree sprang up to mark the spot where a blind man had died years ago. They believe that if it were cut down all the people would become blind. It serves a very definite purpose in imitative magic: if one native wished to deprive another of his sight, all he need do was go to the Blind Tree, rub it, and make his wish. The enemy would instantly become blind.

Primitive man, like the savage of to-day, evidently was not interested in whether or not his imitative magic achieved the result desired. He was probably satisfied to torture the image, feeling certain that the person must have felt the torture also, whether he showed signs of it or not. It was a personal satisfaction. Burning in effigy, piercing

clay images with pins, melting waxen figures before fire, satisfied his barbarous egotism—and undoubtedly kept him from doing mischief.

Imitative magic played a part in medicine also. For instance, a Dyak medicine man who wishes to cure someone who is ill will lie on the ground and pretend to be dead. Other medicine men will bind him up in mats, take him out of the hut, and deposit him on the ground. After an hour or so the medicine men loosen the bindings and the pretended dead man imitates the process of coming back to life. As he recovers slowly, the sick man is supposed to recover with him. So potent is superstition that in many cases the sick man does actually recover.

The Servian and Bulgarian peasants practise a curious bit of imitative magic, as amusing as it is curious. The women take the copper coins from the eyes of a corpse, wash them in wine or water, and give the liquid to their husbands to drink. This renders the husbands blind to the wives' faults!

We have mentioned these instances of imitative magic, and of primitive magic for the control of the elements, to show the firm hold that this type of reasoning had taken upon the mind of man before religion took its place. It would seem that man has never quite overcome the love of magic. There is always a lure in the supernatural, the uncanny, the ghostly. The spirit of make-believe which is ever present in children would appear to be a survival of the make-believe in primitive life. Did you ever know of a boy who didn't love to "play Injun," or a girl who didn't enjoy fussing over her dolls and pretending they were real?

Magic is part of our primitive heritage, and we should be glad to accept it as such. The miracles of modern science are simply magic of another sort—a reasoning magic instead of the superstitious magic of primitive man.

THE BIRTH OF FAITH

No one can possibly estimate the part faith has played in the humanizing, the civilizing, of man. Faith has led us away from blind superstition and fear; it has delivered us from cannibalism, from human sacrifice, from all the horrors of primitive life. It has, in a word, changed us from beast to man.

Faith was born when man for the first time realized the futility in attempting to force nature to do his bidding. A little shrewder than his fellows, he probably saw that the magical ceremonies, the sacrifices and incantations, the pleas and offerings, did not really produce results. Why cling to beliefs that were so often contradicted by experience? The silent procession of the stars seemed in no way affected by his incantations; the rain still fell; the sun still rose in the morning and still set at night; man was still born and still died.

It was not as easy as it might seem to detect the fallacies at first. If rites were observed by a certain tribe to help the sun rise in the morning, those rites would be accepted as worthy of perpetual observance, for the sun never failed to rise. The primitive mind did not reason that the sun would rise even if the rites were omitted.

But the things that didn't happen balanced those that did. Rain sticks failed to produce rain. Wizards used all their professional skill in vain attempts to control the storm and the wind. Slowly there came to primitive man realization that it was not he who guided the earth and the heavens in their course. He realized that friends and foes alike succumbed to a force stronger than any he could wield; that men were as puppets in the palm of a destiny which they were powerless to control.

How like a child primitive man must have been as he felt himself cut adrift from his ancient moorings! We can see him groping for a reason for things, doubtful, half afraid. Step by step we see him yielding his place as ruler of the elements. Now the rain, now the wind, now the

thunder, now the sun—we see him accept them one by one as powers greater than himself, greater than the greatest tribal chief.

And it was then that man prostrated himself, entirely and absolutely, before the awe-inspiring, powerful, unknown being who ruled the universe without consulting the people who lived upon it. It was then that there was born in man a great, overwhelming faith in the mighty power that traced its handiwork on all sides. The trees, the mountains, the sky, the moon—man himself—were all masterpieces of this unknown's creation and dependent upon him for existence.

With this belief, with this faith, came peace. There was a great transition from magic to religion. But do not think that this change came quickly or suddenly. It required long ages of development, as did all of man's greatest steps in evolution. It is plain that the distinction between the natural and the supernatural must have been blurred in the early stages. Primitive man must have sought desperately to understand the higher power of which he now was vaguely conscious. It was not enough to have faith: he needed something tangible to which to pin that faith.

To the primitive mind nothing existed that could not be seen and touched. Eager to worship the power in which he now had faith, but knowing not what that power was, early man floundered about helplessly. He sought the unknown power in the familiar things about him. And there grew up a profusion of primitive religions, strange worships, all based upon mankind's first crude faith.

Like all things he did not understand, primitive man feared the power which he could not control. It probably startled him to think that some of the very things he used in his daily life were the abodes of that power—perhaps the power itself. Of course, it is easier to fear that which we cannot see or feel, so man began to build totem poles and create idols and fetishes as shells to house the spirit of the power or powers he worshipped.

This newer kind of worship—though still primitive—was entirely different from the blind, unreasoning magic and ceremonial that had gone before. Although primitive man beat his fetish and coaxed his idol, there was, nevertheless, a certain faith in that fetish or idol. In the earlier magic and ceremonial, man had attempted to bend nature to his will; now he coaxed his god—which, you understand, was merely the shell that housed the great unknown power—to intercede for him and persuade the unknown to furnish him with all good things.

There is probably no subject in the world about which opinions differ so much as religion—its origin, its development, its nature, and its meaning. Many writers believe that faith came only with Christianity, and they will probably scoff at this association of faith with the earliest forms of worship. Nevertheless, this writer believes that the primitive man who worshipped his fetish or his idol had faith. And because he had faith, his worship was a religion—a crude and savage religion, of course, but one that recognized a power higher than himself.

Ralph Waldo Trine says, "There is a golden thread that runs through every religion in the world." Doesn't he mean faith by that golden thread, and doesn't that thread go back to the time when man stood upon the brink of a new understanding and realized for the first time his own littleness?

THE FUSION OF MAGIC AND RELIGION

As has already been indicated, religion did not begin as a simple, logical thing. It began as a slight, and only partial, acknowledgment of powers superior to man. The perfect submission to one divine will in all things came later, when the jumble of quasi-religious ideas gave way to a deepening sense of man's littleness as compared with the vastness of the universe.

There runs through human thought a persistence which is astounding. What man once believes, he is loath to

discredit. And habits are even more enduring than beliefs. Early man, believing utterly in his magic and his magical ceremonies, accepted his new faith with awe and fear; but he did not throw off the beliefs and customs which had preceded this faith. Magic simply faded into the background, but remained. And its influence has tinged all religions that have since developed.

One can easily understand how a confusion of magic and religion followed. Man became aware that he needed protection and advice, that he needed guidance and knowledge. In the eternal manner of "supplying the demand" there rose hosts of "wise men" and prophets, wizards and magicians, medicine men and sorcerers. Shrewd, cunning, perhaps a step in advance of their time, they played upon the simple credulity of their fellows. Themselves unable to understand the power which guided the universe, they invented modes of worship—strange, symbolic, tinged and alloyed with the stuff of which magic is made.

The acts of worship, devised by dreamers, magicians, priests, satisfied the souls of the people. They did not question the rites and ceremonies which they were obliged to practise. Their wizards and sorcerers were "wise men," were they not? They knew the way to please the gods; they knew how to coax them and frighten them and even, if the occasion demanded it, deceive them.

In ancient Egypt the magicians claimed the power of compelling even the highest gods to do their bidding. In India the sorcerers believe, even to-day, that they have power over the mightiest deities. How differently the history of the world might have been written had the magicians and sorcerers become more powerful than religion and the Church!

In the early fusion of magic and religion, the functions of the priest and the sorcerer were frequently combined. Religious and magical rites were performed simultaneously. Man was content to get what he wanted, whether by prayer or by incantation. It is but natural that frag-

ments of magic should have survived in religion—fragments that are actually part of the worship of the civilized world to-day. We cannot study any existing religion without finding evidences of magic cropping up.

Professor Maspero remarks that “we ought not to attach to the word ‘magic’ the degrading idea which it almost inevitably calls up in the mind of the modern. Ancient magic was the very foundation of religion.” Indeed, one might say that the age of magic represents one of the landmarks in the path of man’s progress.

THE EVOLUTION OF RELIGION

“Religion,” says H. G. Wells, “is something that has grown up with and through human association, and God has been and is still being discovered by man.”

The beginning of religion and its development run on parallel lines with the development of the human race. All religions, it would seem, have built their structure around the emotional life of the people—fears, superstitions, traditions, magic ceremonials all being utilized. And if the magical and superstitious elements of religion have changed little, it is probably because there has been very little change in man’s primitive personality.

Religion has played such a large part in the humanizing of man, and in the creation of his customs—social as well as secular—that a brief study of its origin and evolution is necessary in introducing this work. The subject is not an easy one to handle. To write of religion in any of its phases is to be drawn into a maze of widely varying notions and beliefs which have been accumulating from the earliest times. Almost everyone who has ever written of religion has advanced some favourite theory of his own. It is doubtful whether any two students of religion have ever had the same notion as to its origin, its exact and precise beginning.

But *can* one give an exact and precise fact concerning the origin of religion? Can one make any definite assertions

•

at all? Who knows when religion started, or where it started, or how many times it came to the surface of savagery only to be buried once again under the barbarity of primitive reasoning? Since the very dawn of life man has poked timidly into the great unknown, accepting the fancies of his mind as facts. Who can be clever enough to judge how much of that fancy was faith—how much of it possessed the essence of true religion?

We must, then, throw all dogma to the winds. We must write of religion just a little differently than any one has before. Instead of concerning ourselves to any great extent with the great, familiar religions of mankind, such as Buddhism, Christianity, Judaism, Confucianism, we must search the simple faiths of man, starting with the first crude forms of worship, and see how these simple faiths have influenced thought, custom, civilization.

In other words, instead of presenting the various beliefs of the many writers on religion, or the interesting but unproved theories which have been advanced, we must present facts, truths, from the history of man himself. This will give us not only a better understanding of our primitive ancestors, but a finer, clearer, more beautiful conception of religion and all it has meant to man in his march through the ages.

The Oldest Forms of Religious Worship.—It would appear that there is nothing, either visible or imaginable, that man has not worshipped at some period in his development. There have been gods of every name and shape, of every nature and form. Man has worshipped trees and stones, flowers and fruit, the earth and the sky, the sun and the moon, saints and snakes, living men and dead ancestors. The gods, idols, deities, and objects of worship which we encounter are bewildering in number.

Groping about helplessly in a hostile world, vaguely conscious of a power greater than himself, primitive man very early felt the need for worship. But worship of what? The curiously marked stone over which he stum-

bled and on which he hurt his toes; the tree into which he climbed and thus escaped the jaws of some jungle beast; the stars at which he gazed at night, and which seemed somehow to motion and beckon to him; the reflection of himself in the water. He worshipped the things which were close to him, the things he could see and hear. Particularly did he worship the things he feared, and the things that hurt him, like the stone over which he stumbled.

One of the oldest forms of religious worship of which we have any definite knowledge is nature worship. Primitive man must have speculated a great deal about the living things he saw all about him. And out of this speculation grew many kinds of nature worship, including the curious Phallic worship which we shall presently discuss.

Nature worship is what the name implies—the worship of nature pure and simple. Primitive man worshipped the sun and the rain which made things grow; he worshipped the moon, the planets, the stars, the elements.

Early man believed that the changes of the moon portended change in the lot of mortals. Therefore, he feared the moon more than any other natural object. The Bushmen, as an instance, had a superstitious dread of the moon and its changing aspects, believing that it could cause great damage to the earth and to man. Yet they have this curious tradition concerning it: Having incurred the wrath of the sun, the moon (which is in reality a man, according to their age-old belief) has been knifed until nearly destroyed. But having implored mercy, he is permitted to grow from the small piece until he is large and full and round again, at which time the stabbing process begins all over. Strange contradictions such as this occur frequently in savage life. The moon is feared; yet it is the sun which is actually doing the damage.

At a very early period religious ideas gathered around the tabu. The tabu (a word of Polynesian origin) is a magical or religious prohibition. Certain places, persons, animals, things are endowed with a magical or sacred

power, and mere man is forbidden their use or association. Thus the spear of the chief was tabu to the other members of the tribe. The bear, being worshipped by some tribes, was tabu in those tribes as food. A series of ritual acts, of worship, grew up around these early tabus and were retained long after the reason for them was forgotten.

Animism (a term made popular by Tylor) is a primitive form of religion in which conscious life is attributed to all objects, including rocks, trees, stones, fire, water. The worship of stones was widespread, possibly because of the belief that the spirit of the dead entered the stone and dwelt there. Thus in Central America when a man of importance died, a stone was put into his mouth to receive his soul. The worship of sacred stones is common in India and, to some extent, in China to-day. Many North American Indians also worship stones, prominently among them being the Pueblos. The Pueblo Indian firmly believes that his success in hunting depends entirely upon the cold stone which he carries with him.

Tree worship is very ancient. It was practised by practically all the Aryan peoples of Europe. The Druids worshipped the oak tree. The oak tree seems also to have been sacred among the Greeks. Among the Swedish peasantry there is a tradition that a leafy branch stuck in each furrow of the cornfields will insure an abundant crop. Many authorities believe that the Maypole was once the May tree, and that it had its origin in tree worship still observed by European peasantry.

Creating Tangible Gods to Worship.—It is interesting to note how very little reason primitive man required for creating a god or a deity. One wonders how these early ancestors of ours kept track of all the idols of fetishes they worshipped, of all the stones and trees and animals to which they felt they owed reverence! It must indeed have been confusing, unless—as is sometimes the case—the medicine man or magician memorized the tabus and the gods and conducted the rites and ceremonies for the people.

It is to be noted that very rarely did one tribe or one people have but one object of worship; it was more usual for one tribe to have many objects which required worship of some sort or other.

An excellent illustration of how deities are created even to-day by savage men is mentioned by Lichtenstein in his "Travels" (vol. I, p. 254). He relates that the king of the Koussa Kaffirs, having broken off a piece of a stranded anchor and carried it around with him, died soon afterward. Thereupon all the Kaffirs looked at the anchor with awe and reverence, considering it alive. They saluted it respectfully whenever they had occasion to pass near it. The mere finding of an object like an anchor would have been sufficient reason for primitive man to have set up that anchor as his god.

In Yucatan it was anciently the custom to place an infant on the ground on a sprinkling of ashes and leave it there overnight. The following morning the ashes were examined, and if the footprints of any animals were discovered that animal was chosen as the child's lifelong deity. Sometimes the infant disappeared—carried off, no doubt, by a beast—in which case the parents believed the deity to have claimed the child as an offering. They promptly made offerings of thanks to their own gods!

Man made a god of the animal that supplied him with the food; of the axe that protected him from his enemies; of the skins that kept him warm. He was never at a loss for a god, never searched very long for something to worship. But this early worship was not entirely due to the demands of the soul; it was due largely to a profound fear of impending evil and a desire for good.

Thus it was not enough for primitive man to have a god to worship. He must see that god, touch it, punish it if it did not do as was desired, pray to it, make offerings to it. It must be a *tangible god*. This accounts for the idols, totem poles, amulets, fetishes, and other objects of worship which were created in such great profusion.

The Fetish.—A fetish is simply some material object in which a god or a supernatural power is supposed to dwell. As a form of worship it represents the lowest type of idolatry. The fetish worshipper puts a spirit into everything he can see, hear, touch, taste, smell, or imagine. This type of worship still exists among many savage tribes.

Very probably, fetishism grew out of magic. The possession of a fetish is supposed to give the owner a certain power over some spirit or demon. The fetish, in other words, acts as a sort of charm or amulet worn or carried on the body and portending to protect from evil influences and disease. We must recognize it as a form of religion because it reveals a glimmer of faith, a suggestion of man's subservience to what he believes is a higher power.

The word *fetish* is of Portuguese origin, a corruption of *fetico* which means an amulet or a charm. De Brosses, a French writer who published a book entitled "*Du culte des dieux fetiches*" in 1760, termed all "terrestrial and natural objects apparently worshipped by the negroes 'fetishism' and this cult he denominated 'fetishism.'"

The fetishes are of various sorts. Sometimes the reed of a certain plant, the root of a certain tree or the horn of a certain animal is used as a fetish. The claws and teeth of animals, and slips of wood fantastically notched and carved, are frequently used. Among the Kaffirs the witch doctors and fetish men furnish the fetishes, which, among these people, are supposed to protect from the evils of witchcraft.

Among the Indians fetishism was, and is, common. Frequently it happened that an Indian dreamed of an idol or a fetish in a certain grotesque form and when he awakened he proceeded to make it according to the pattern of his vision. Similarly, the Negroes of Africa frequently made their own fetishes, although ready-made fetishes in the form of claws, teeth, etc., are often noticed by the traveller among these people.

The Negro of Guinea beats his fetish if his wishes are

not complied with. This is an example of the endeavours of the savage to make a slave of his deity. On the surface this would seem like the very opposite of religion. But, on the other hand, these same people hide the fetish if about to do something of which they are ashamed.

Strange fragments of fetishism have found their way into civilized life. The little ivory pig which the modern man wears on his watch chain is probably a relic of fetishism. Aladdin's Lamp is nothing more or less than a glorified fetish. And the many "lucky charms" which are offered for sale in any novelty shop are simply fetishes in a modern guise.

The Totem.—The fetish is a single object. The totem is usually a class of objects. In its stricter terminology the totem denotes the object or objects from which the family or clan derives its name.

The savage regards his totem with superstitious respect. He believes that there exists between his totem and himself a certain intimate and sacred relation. Therefore it is almost universally customary among savages to refrain from eating the animal or animals which appear in the totem pole. And marriage within the totem name is considered incest, punishable in many instances with death.

The reason for not eating the totem animal is explained by some authorities as having to do with the fact that savage man believed himself descended from that animal. For instance, the Bakalai believe that if a man eats his totem animal the women will give birth to animals of the totem kind. And the Omahas believe that the eating of the totem will bring sickness, perhaps death, to the women and children.

In Australia totemism is almost universal. Clans are named from their totems, and the totem animals are not eaten. Totemism is found also among the American Indians, and the traveller can see many grotesque and fantastic totem poles throughout this country which date back hundreds of years.

The relation of totemism to civilization cannot fail to be of interest to the student. The totem tended—tends—to consolidate a group of individuals. Thus, supposing the Cockatoo Indians and the Crow Indians are food groups of the same totem; the people of both groups are considered brethren because they are “one flesh.” This consolidating of groups, this organizing of societies under certain totem kins, could not fail in early times to have had an appreciable effect upon the civilizing of man.

Sir James G. Frazer, in his delightful work called “Totemism” traces the derivation of the word totem to an Ojibwa (Chippewa) word, the exact spelling of which is somewhat uncertain.

Cannibalism and the Worship of Animals.—Under the heading “Strange Cannibals—They Are Deeply Religious,” a New York newspaper recently published the following bit of gruesome information:

A cable message says France worries about cannibalism in the Kamerun, the part of Africa that France took from Germany after the war. Down there certain blacks, a secret society, call themselves “Leopards,” and act the part.

Wearing leopard skins, they lie in wait, kill their fellow blacks and devour them.

The man-eating is part of their religion, curiously enough. Another interesting fact is that the cannibals are the finest specimens among the natives. Plenty of proteid and vitamins explains their physical superiority, according to scientists.

It is not strange or curious that man-eating should be part of the religious worship of these savages. They are merely carrying out an instinct bred in their souls—and appetites—many generations ago. Their fathers and grandfathers and great-grandfathers before them were cannibals. Far from being a form of depravity practised by only a few peoples, cannibalism marked the life of nearly all peoples in primitive days.

Probably cannibalism began as a solution to the food problem. Man was certainly easier prey to man than the huge beasts—at a time when no weapons were known.

But we have records culled from all corners of the world showing that men killed and ate their elders; mothers even ate their children, and savages ate their dead relatives as a form of religious and tribal ceremony. Thus, although cannibalism doubtless originated in a bodily need, imaginative man soon gave it an emotional and religious meaning.

Among the Lhopa of Sikkim, in Tibet, it was customary to eat the bride's mother at the wedding feast. (There always *has* been a prejudice against mothers-in-law!) Among the Chavante, on the Uruguay, mothers ate their babies when they died, believing that by doing so they regained the tiny souls. In the Solomon Islands victims were actually fattened like cattle. On the Upper Congo cannibalism was practised for thousands of years as the result of an instinctive passion for cannibalistic feasts. Among these peoples the love of human flesh became as strong as the opium habit.

In this contemplation of cannibalism, which is necessarily a part of our study of man, it would be comforting to remember that all things are relative. The Maori people, who are cannibals, have never been guilty of torture or deliberate cruelty. They are struck with horror when they hear of the thumbscrews and rack of Christendom; they cannot understand the "roasting alive" of Joan of Arc. To apply "live coals which pain exceedingly" to a person is cruelty, but to kill a person and cook him for consumption is another matter.

Frederick O'Brien, in his "White Shadows in the South Seas," tells how the Marquesan ponders over the problem of Christianity, attempting to understand the "magic" of the missionaries. These cannibalistic people see no harm in their mode of life, but they try wholeheartedly to understand the worship of the white man. Their confusion between barbarism and religion is sometimes amusing. According to O'Brien, they ask; concerning resurrection:

What would God do in cases where sharks had eaten a Mar-

quesan? And what, when the same shark had been killed and eaten by other Marquesans? And in the case of the early Christian forefathers, who were eaten by men of other tribes, and afterward the cannibals eaten in retaliation, and then the last feaster eaten by sharks? There was a headache query!

There is a phase of cannibalism which probably preceded the eating of animals, and out of which the worship of animals doubtless grew. This is the once world-wide custom of eating a man to gain such properties as strength, swiftness, courage, etc., from him. The savage of pre-historic times ate his slain enemy to acquire his strength and other good qualities.

In this connection, the Bechuanas had a solemn ceremony of eating the flesh of an enemy killed "following the ancient superstition that eating human flesh inspires courage and by degrees renders the warrior invincible." It is said of the notorious Matuana that he drank the gall of thirty chiefs in the belief that it would make him stronger than any man. And the ancient Russians, if certain writers are to be credited, ate their fathers believing to gain thereby their strength and wisdom.

If this type of cannibalism preceded the eating of animals, it is easy to see how the next logical step would be the eating of certain animals for the qualities which they possessed, and the prohibition of other animals for the opposite reason. Thus the Amaxosa drank the gall of the ox to make themselves fierce. The Hottentots ate the flesh of lions to gain that animal's courage and strength. But the Hottentots even to-day will not eat the flesh of hares, believing it will make them timid. Similarly, the Dyaks of Northwest Borneo forbid their young men and warriors the flesh of venison; only women and old men are permitted to eat this flesh, as it renders those who eat it as timid as the deer.

This idea that a person imbibes the characteristics of the animals he eats is widely distributed. We find it in Australia, in Africa, in certain sections of South America. The Malays of Singapore will give a large price for the

flesh of the tiger because they believe that the man who eats tiger flesh acquires the sagacity, strength, and courage of that animal.

The countless pictures of animals which have been discovered in palæolithic caves are not sporting pictures, not the products of idle moments of amusement. The latest belief is that they are religious pictures—pictures that have a certain spiritual significance. Primitive man, in his conceit, liked to believe that he was descended from the lion whose strength he admired, or the tiger whose agility he envied. He made of these animals a god, and in eating the god he believed that he became one in common with him.

Thus eating certain animals became a sort of tribal, religious rite. This would seem to indicate that sacrifice was not originally offered *to* the god; adopting the opposite theory, the god himself was sacrificed and gave his strength, his spirit, his life to the people. This is a curious twist of religion which has not yet been developed to its fullest possibilities. Perhaps some day a writer on religion will trace its influence through the centuries and find instances of it in our own forms of worship.

But this is not a history of religion or a book on theology. In connection with this work it will suffice if we touch merely upon those important features of early and primitive religion which influenced our own religions and which help us to a better understanding of early man. Animal worship, which we shall now consider, is an extremely ancient type of worship, still existing in many parts of the world. Some of our customs, not only religious but social, are directly traceable to animal worship.

How did animal worship grow out of animal-eating, you ask? It is reasonable to suppose that man, believing himself descended from the animals he admired—and therefore eating them to be one with them—gradually came to hedge around these animals with certain tribal tabus. Ultimately the animals became sacred and as such took part

in the tribe ceremonial. From this it was just a step to the tabuing of those animals as food. They were worshipped; they were incorporated into totems. Totemism, we find, is one of the most widely distributed modes of showing respect to animals.

Animal worship was very prevalent in America, The North American Indians worshipped the bear, the bison, the hare, many species of birds, the buffalo. In Brazil the jaguar was worshipped. In Mexico the owl was feared as an evil spirit.

The ancient Egyptians were greatly addicted to animal worship. Even now the natives on the White Nile will not eat the ox, according to Sir S. Baker. In India animal worship has flourished since early days, and there is to-day a sacred cow that is worshipped and fêted. Eagles, toads, dogs, fish, horses, leopards, lizards, monkeys, serpents, sheep, buffalo, cattle—all have been worshipped at some time or other by savage peoples.

The cult of the white elephant is familiar to all students of religion. In Siam it is believed that a white elephant contains the soul of a dead person, perhaps an ancient god. When one is taken, the capturer is rewarded and the animal is baptized, fêted, worshipped. At death it is mourned for like a human. The cult of the white elephant is found also in Cambodia, Indo-China, in Sumatra, Ennares, Southern Abyssinia.

It was only when man came to realize that he was really superior to animals that he began to make gods in his own image. The Egyptians appear to have been the most prolific of all idol or god-makers. The man-like gods of ancient Egyptian worship are bewildering in number.

Kings as Gods.—H. M. Tichenor, in his "Survival of the Fittest," says:

Religions are the reflex of the state of society that produces them. The gods are largely the images of the ruling and exploiting classes.

This is very largely true. When great serpents were a dreaded power, serpents were worshipped. When lions

and leopards were feared, lions and leopards were worshipped. When kings became powerful not only they were worshipped, but gods were imagined that sat on thrones and wore crowns.

Thus in Egypt we are confronted by a religion which worships kings as gods. The daily life of the kings of Egypt was regulated in every detail by precise and unvarying rules. Traditional tabus had to be observed. Since the welfare and existence of the people were bound up in the king, the man god, the life and health of this god were naturally of great concern.

Very frequently in early society we find that the king or priest was thought to be endowed with supernatural powers. The control of nature was believed to be more or less under his control. While, under favourable circumstances, this might have been a mighty nice thing for the king, when there was bad weather, when the crops failed, or under similar calamities, his very life was in danger. He was held responsible. In ancient China the king was frequently killed in time of drought. The Greeks of the Homeric Age believed that a good harvest or a period of prosperity was due entirely to the king, and rewarded him accordingly.

The Phallic Worship.—We cannot leave the subject of religion without a brief survey of Phallic worship, a curious and interesting type of worship which grew out of nature worship. It was practised by the Egyptians, the Phœnicians, the Greeks, and the inhabitants of Asia Minor in the early periods of civilization.

In the Phallic religion the generative organs are worshipped. Our Phallus-worshipping ancestors sanctified the functions of the body which gave them the most pleasure, and which reproduced their own kind. We can understand how early man stood in awe of the mysteries of nature, speculating in his crude fashion as to the source of life. The generative organs were the obvious physical basis of procreation; therefore they were venerated.

/

Symbolism played a large part in Phallic worship. There are still in existence to-day remarkable specimens of original phallic symbols—crosses, talismans, amulets, etc.—all symbolic of the phallus. The steeples on the churches, the horseshoe over the door, the pyramids and obelisks, arts, architecture, literature, language—all show the influence of our Phallus-worshipping ancestors.

In the National Museum at Washington one can see large stone phalli which were dug up in Tennessee, Georgia, California, and other sections of the United States and Mexico; and H. M. Tichenor, in his "Primitive Beliefs," tells us that a phallic image in the form of a pillar is still to be seen in the ruins of Solomon's temple.

These relics of Phallic worship remind us that a section of mankind is still searching for the answer to the eternal question—Whence did we come and whither are we going? For many the riddle of creation has not yet been solved, and man still hopes for, but is not sure about, immortality.

Conscience and the Soul.—This brings us to our final contemplation of religion. We have not really made a study of religion, for we have not even touched upon Judaism, which has given something to almost all existing religions; upon Buddhism which numbers more followers than almost any other faith; upon the religious systems of the Greeks, the Romans, the Japanese; upon Christianity, the fabric of which contains threads, fibres, that reach back into ancient paganism.

We have, however, made a study of religion in its relation to man—his manners and customs, his early modes of reasoning, the beginning of his faith. We know now that Christianity did not flash upon the world in a finished state, but grew up step by step in the process of evolution and adapted itself from many other forms of worship. Many of its sacred symbols were borrowed from pagan peoples.

Above all, we know now what the early religions, the early forms of worship, crude and savage as they may seem, have done toward holding the social fabric together.

Worship of nature, of totems and fetishes, of animals, of man gods and gods created in the image of man all have helped change man from a selfish, wandering two-legged beast to a home-loving, kin-loving, worshipping member of a group. No matter how savage or brutal the form of worship may have been, no matter how ridiculous it may seem to our twentieth-century way of reasoning, we must remember that the very act of worship tended to solidify or consolidate the group, and thus played a large part in holding together the early fragments of society.

Let us now glimpse the conscience of man and see what has been happening to it through these centuries of development. Had man a conscience at all in his primitive state? Did it bother him? Did he ever feel the least bit of remorse at having killed and eaten his enemy, at having beaten and forsaken his aged father on the march to newer and more plentiful hunting grounds?

Conscience, by its very nature, belongs to the higher stages of civilization. Yet this writer cannot help believing that a certain quasi-conscience existed in the savage mind which was steeped in fear and superstition. The conscience that is born of fear is not conscience in its truest, finest sense; yet it would appear to be the undeveloped conscience of an undeveloped mind.

Do you recall the story of Peter the Great, the Tsar who founded the power of Russia? It is interesting enough to quote. While the Tsar was sleeping a would-be murderer twice pressed the trigger of a pistol held against his head. And twice the pistol missed fire. Within the mind of the man who had come to kill, something spoke. Was it fear of an unknown? Was it conscience? We do not know. Nevertheless, he wakened the Tsar and, telling him that he had come to the palace to kill him, said, "But God would not permit it. He sends me to prove his love of you. Now kill me."

The man doubtless believed what he said. Thus was conscience born of fear, as it might have been born any

number of times in our savage ancestors, who feared not one but many unknown powers. The Tsar did not kill the man. Instead he told him to go away in peace. If, as the man had indicated, he was God's special envoy to show His special esteem to the Tsar, the Tsar would lose that esteem by killing the envoy. In other words, the Tsar was as superstitious and as awed by the coincidence as the would-be murderer.

Is it not possible that conscience was early awakened in primitive man through just such superstition as this? And that conscience advanced as civilization advanced, the one keeping step with the other?

As we study religion in its many phases, and browse for a moment along the byways of religious reasoning, we cannot help seeing that there was growing up in the lives of men, everywhere, from the earliest times, a certain something which tended to bind them together mentally and emotionally—a certain something which seems to hold together the bricks of human nature from which civilization is built.

That "something" we would call simply *soul*. We do not know any more about it to-day than our prehistoric ancestors did. Perhaps that is why it is so fascinating to study the primitive notions concerning the subject of the soul.

Readers who are acquainted with Dante know of the idea that the dead have no shadows. The poet did not invent this. It is a piece of traditionary lore. From the very earliest times men have regarded their shadows as their souls. This belief exists even to-day among the Benin Negroes. The Basutos believe that if a man walks at the brink of a river and his shadow falls upon the water, his life is in danger. A crocodile may seize it or it may drown. Therefore there exists among these people a superstitious dread of walking near the water.

With many peoples, this conception of the soul being identical with the shadow flourishes. The Greenlanders say

that a man's shadow is one of his two souls—the one which goes away from his body at night. The Fijians also believe that a man has two souls, and the shadow is called the "dark spirit" as distinguished from the other. But the reflection in the water is not considered a shadow among the Fijians. On the contrary, they consider it the true likeness of the man—and hence his "light spirit."

Among the primitive peoples, the soul was conceived to be a facsimile of the body. The reason for this belief can readily be seen. In his dreams man saw friends he knew to be dead, people probably who had been devoured by animals. Yet he saw them whole and alive in his dreams. This inevitably led to the belief that there existed an incorporeal part of man—a part which survived the dissolution of the body.

Of course, the conceptions of the soul varied with different peoples. The shadow theory is found in Tasmania, North and South America, classical Europe. The Nootkas of British Columbia regard the soul as a tiny facsimile of man living in the crown of the head. Many peoples conceived of the soul as a bird. Various tribes of North American Indians, for instance, believe that the soul is a bird enclosed in an egg and living in the nape of the neck. When a man dies they say that the shell has broken and the bird has flown away.

The belief in a soul, gradually but nevertheless at an early date, brought about the idea of a future life. And the idea of a future life, of an immortality, has been man's sustaining hope through the centuries.

OUR ANCIENT HERITAGE

The foregoing pages give but the briefest outline of man in his infancy. For untold ages man has been thinking, wondering, hoping, scheming, struggling—sometimes progressing and sometimes regressing—but always slowly evolving from savagery to civilization. We to-day can but

dimly realize what a painful and prolonged struggle it must have been to humanity to reach the present point of civilization.

The world has progressed tremendously since the beginning of the Christian era, and particularly in the last few hundred years. Civilized man has accomplished through science what primitive man attempted to accomplish through force and through savage worship. He has conquered the forces of nature—compels those forces to serve him. He has actually harnessed the lightning from which early man fled in terror, and he has achieved many other amazing triumphs.

But we who reap the harvest of a newer and more advanced age should not forget that we stand upon a foundation built for us by the generations that have gone before. We owe a debt of gratitude to the numberless and nameless men and women who lived and toiled in the ages before us and who have made us, to a very great extent, what we are.

After all, can we afford to ignore our savage ancestors, can we afford to be contemptuous of their share in human progress? The amount of new knowledge which any one age, no matter how remarkable, can add to the great common store is comparatively small. What are two, or three, or even four thousand years compared with the countless generations in which man has been developing? What can the few thousand years of recorded history mean beside the million or so years of unrestrained animal activity—the years during which our ancestors evolved from beast to man?

Primitive man was the true pioneer of civilization. What we of the twentieth century are prone to call by the name of "civilization" is just a thin film of idealism spread over the top of a million years or so of human savagery. Stripped of that idealism, stripped of its conscious glory and triumph, life is very much the same as it was thousands of years ago. It is the purpose of this work, primarily, to prove that this is true.

We are like heirs who have inherited a fortune which has accumulated through many generations. That fortune is in the form of folklore and traditions, customs and beliefs, habits and impulses. As Mr. Frazer points out, our resemblances to the savage of yesterday are still far more numerous than our differences from him. Many of the customs, impulses, and ideas which we are inclined to look upon as original and intuitive have been bequeathed us by our savage ancestors, who acquired them by age-to-age experiences.

The Relation of Primitive to Modern Society.—"As creatures of emotion we are hundreds of thousands of years old; as reasoning beings we are but of yesterday," says Edward Clodd in his "Magic in Names" (p. 10). It is the mode of life that has changed; human nature is very much the same, fundamentally, as it was when civilization was young.

Thousands of years ago any savage would have felt honoured to be selected by his people to accompany their dead chief into the next world. To be buried alive with a man of such tribal importance as the chief pleased the ego of the savage. To-day men are not buried alive to accompany other men of importance into the next world. But thousands still shout in frenzy as two civilized beings try to pound consciousness out of each other in the ring. And of those thousands it is doubtful if there is one who would not feel honoured by the suggestion that he carry a valise or some other article for the winner.

Thus do our savage ancestors slumber within us. There is, indeed, a "solid layer of savagery beneath the surface of society." And the long ages that have gone before show our own culture in the making. Unless you have turned special attention to this subject and studied it carefully, you cannot realize that a mass of pagan and primitive ideas exist in our code of social life, exercising a living hold upon the popular mind. Primitive life has bequeathed us traditions, customs, and beliefs; we have accepted them as our own.

In primitive life it was a symbol of peace to drop the weapon and extend the hand-- unarmed. From this crude beginning developed our handclasp.

Dr. James Harvey Robinson, in his "The Mind in the Making," says that there are four historical layers underlying the brain of civilized man. They are the animal mind, the child mind, the savage mind, and the traditional civilized mind. All these old minds, he says, contend with the higher mind that has been evolved. In an instant a man can become an animal, a child, a savage. Sometimes the child mind is always predominate, and we have an imbecile. Sometimes the savage mind is always predominate, and we have a criminal. But on the whole it is the traditional civilized mind that predominates—a mind rich in a heritage of age-old tradition, a mind that still accepts without reasons, that still is tradition-bound and custom-bound.

Many authorities have adopted the theory that the individual in a few months passes through changes that have taken the race millions of years to undergo. William J. Fielding, in "The Caveman Within Us," declares that man is still chained to the cave man within him, still chained to primitive levels. Beginning with the age of one year, he says, the mind of the civilized child is a crude but unmistakable outline of the prehistoric evolution of the race.

We know, of course, that the young child is a savage. He has all the emotional reactions peculiar to the savage. He likes to tie cans to the tail of the neighbourhood cat. He likes to tear the legs from a frog, the wings from a fly. He likes to paint his face and pretend he is a strong and fearsome Indian. And even as an infant he likes to wield a stick, banging away to the right and the left, much in the manner of his club-using ancestor. Contemplate, if you will, upon the rattle. Is it not necessary to the child's natural emotional instincts?

These are all primitive pastimes [says our authority], and all of them still fulfill the rôle of an emotional outlet for the primitive cravings of modern man. Children are dominated by these primitive emotions; normal adult persons who have succeeded in adapting themselves to their social environment have learned to conform, more or less, to certain general requirements of our civilization; but within

every individual, under this surface conformity, there remains intact all the old mechanism of the primitive savage.

"Surface conformity"—a happy phrase; but notwithstanding this "surface conformity" to the time we live in, there is a remnant of primitive man still within us—within the very best of us.

The Veneer of Civilization.—Despite the great scientific triumphs of recent years, despite the great strides forward which recently have been taken by mankind, civilization has just begun. That is, civilization in its twentieth-century interpretation; for basic civilization began when man first cooked his food, and made pottery in which to preserve it, and learned to speak, and write, and think. The real story of civilization, it would seem, lies in the millions of years still remaining for man on this plane.

What we call civilization to-day is merely a "slight coat of cultural whitewash"—a veneer over the surface of impressions, emotions, impulses, instincts, superstitions, fears that have been accumulated by man during his ages of struggle with the forces of nature. We move to-day upon a thin crust of culture which at any moment can be swept away. The recent war is an excellent example of civilization reverted to savage instincts, of restraint swept away, of intense and startling emotional reaction.

As Freud explains, it is not that people sink so very low in time of war; it is that they are never so high in peace times as is popularly supposed. Let the modern man hear the primitive call of the tom-toms, let his blood pulsate to the blare of the war spirit, and in a flash centuries of civilization vanish. War unlooses all the primitive passions and emotions of man which are held in check during saner times.

This is true also of the crowd or the mob. Give it the least excuse or incentive and the mob will become wild, will start any sort of savage riot. As Mr. Martin very cleverly expresses it, "The crowd is a device for indulging ourselves in a kind of temporary insanity by all going crazy together."

Yet this very "crowd," under ordinary circumstances, insists upon going in the beaten track. Man has an inherent inclination to imitate the past. He is resentful and astonished at every new discovery. He laughs at a Columbus who says the earth is round, and jeers at a Fulton who would make a boat move by steam. Even to-day the man who departs from the beaten track, who dares to blaze new trails through the mazes of custom, receives little better consideration than did Friar Bacon or Galileo or the many others who have tried to tear down the walls of custom in the generations gone by.

This brings us at last to the great, fundamental purpose of this work—the study of customs and their origins. Custom, in savage life, is a chain which man breaks at the risk of death. Shall we who live in an age of enlightenment accept customs, like the savage, without reason? Or shall we know at last precisely why we do things, why we say things? Why do a thing if you do not know why you do it? Isn't it immensely more satisfactory to *know* exactly why you do such and such a thing—your *reason* for adhering to a custom which is ages old and which has no twentieth-century significance?

The Survival of Custom.—The term "survival of custom" appears to have been originated by Sir John Lubbock, who wrote the "Origin of Civilization." No better term could be used. Custom *has* survived, and it will probably go right on surviving as long as man patterns himself by his neighbour. The things that we consider customary and conventional are simply the things that others around us are doing, and that others before them have done.

The human race has always clung to the established customs and traditions. The habits and customs of man are almost as enduring as the flint knives, the stone monuments, and the clay pottery which tell us of the daily life of his primitive ancestors. Many old customs still survive in our social life, curiously obtruding the past into the present. These we shall study in detail in the following chapters.

Custom is the unwritten law of life. We have only to look around us to see how potent custom is. It dies hard. It survives the shocks by which kingdoms are overthrown. Early civilizations were born and perished time after time; races achieved the highest degree of culture and sank back again into obscurity; but each succeeding system of society invariably borrowed some of the custom and the formality of the preceding order. Thus, once a notion, a tradition, or a custom was fairly started in the world, it lived on from generation to generation, preserving some form and colour of identity.

Many meaningless customs which we to-day observe had at one time a practical or ceremonial intention. Why do they survive when the original meaning has long since fallen out of popular memory? Superstition, of course, has a great deal to do with it. People are afraid to ignore the age-old customs which have been handed down to them. It is much easier to observe a custom and laugh about it than to ignore it and be troubled by tiny fears of evil influence. Customs are, in a sense, sacred, as any savage will still tell you to-day, in the jungles of Ceylon or in the hinterlands of Australia. "Remove not the ancient landmarks which thy fathers have set," say the sacred narrators. (Proverbs XXII, 28.)

But how is it, you ask, when races had to learn their lessons all over again, when people lived for a brief span and disappeared forever, when civilization flourished in remote corners of the world—how is it that we find such a striking similarity of custom wherever we go? The uniformity which pervades the thoughts and customs of the world to-day is indeed remarkable. Strange reversals occur only here and there—such as where white is the colour of mourning, or where to turn one's back on a person is a sign of reverence.

Mr. Lang explains why we can pick up threads of similar customs in widely different countries, among widely separated peoples who do not even speak the same language.

In the moderate allowance of 250,000 years [he says], there is time for stories to have wandered all around the world, as the Aggry beads of Ashanti have probably crossed the continent from Egypt, as the Asiatic jade has arrived in Swiss lake dwellings, as an African trade cowry is said to have been found in a Cornish barrow, as an Indian Ocean shell has been discovered in a prehistoric bone cave in Poland. This slow filtration of tales is not absolutely out of question. Two causes would especially help to transmit myths. The first is slavery and slave-stealing; the second is the habit of capturing brides from alien stocks, and the law which forbids marriage with a woman of a man's own totem. Slaves and captured brides would bring their native legends among alien people.

In prehistoric time there must have been much transmission of myth. And with myth went custom. Primitive man travelled, as is indicated by the similarity of axes and arrowheads discovered on both the old and new continents, and with him he carried his local traditions and customs.

It frequently happened that conquerors patterned themselves after the conquered, borrowing their customs, habits, traditions—even their language. The Franks in Gaul, for instance, became Latinized. The Romans who conquered Athens were governed by their new environment. The Hyksos conquerors of Egypt were subjugated by its customs, its civilization. Somehow the old feeling always prevails.

But coming down to our own day—what, precisely, is custom as it concerns us? Custom is mob thought, is it not? Custom is made up of many customs. We submit to the tyrant—for custom is a tyrant, you know!—through a vague desire to “hunt with the pack,” to be one of the crowd. We do not wish to appear strange or conspicuous or queer. We are half afraid to give offence, to cause confusion. We dare not break down a belief. We do the thing that everyone else does because we are afraid to do otherwise.

That is custom. A funny thing—yet it holds the fabric of social life together. It makes it easier for us to mingle with one another, to understand one another. It keeps

the thin veneer of civilization above the layers of savagery that slumber in our souls.

"The iron age of the world belongs to the past, its golden one to the future," says James A. Farrar. Perhaps by studying the past we can glimpse the future—and see a bit of the gold that is promised.

We wish to make one fact absolutely clear before leaving this Introductory Chapter. We have not attempted to give the complete story of man from the dawn of life to the present day. Man passed through many stages of development—all interesting and all important. But this is not a history of man and how he has developed or what he has accomplished. It is a *book of origins*—a history of the manners, customs, traditions, and superstitions of man. Therefore, only that part of the history of man has been sketched which has direct bearing upon his manners and customs. For a more detailed account of man in his primitive state and of his evolution through the ages we recommend "The Golden Bough," by Sir James G. Frazer, "Origin and Evolution of Life," by H. F. Osborn, and Sir John Lubbock's "Origin of Civilization."

CHAPTER II

SEARCHING THE SOURCES

Trample out Minoan culture, it shoots up again in thousandfold splendour in the glory of Greece; crush out Greece, the whole world is fertilized; give the Roman world up to the fury of barbarian hordes, and the outcome is Modern Europe. We see one race stepping into another's place in the van of the march, but nothing of the continuous inheritance is lost. Every treading down of the seed results in a harvest richer than the last. Chaldean, Egyptian, Greek, Roman, European, bear the torch in turn; but the lampadophoria of human progress is continuous. In the progress of evolution races and nations count for no more than do individuals. Like individuals, races, empires, civilizations pass away,—but humanity proceeds onward.

—ROBERT BRIFFAULT.

THE EARLY CIVILIZATIONS

HOW would you like to take a rocking-chair journey around the world? How would you like to visit, in their native lands, the people from whose myths, legends, customs, and traditions we have so generously borrowed?

Here is a brief geographical survey that will carry you into lands strange and distant, among races civilized and uncivilized. You will learn to know who the Fijians are, and the Hottentots, and the Bushmen, so that when we speak of these people you will know and recognize them.

Our journey starts with the very birthplace of civilization, Egypt—the “gift of the Nile.” It was in Egypt, shut in by the Red Sea and the desert, by the Mediterranean and the mountains, that the first precious seeds of culture and civilization were planted. Here one finds a highly advanced form of picture writing on papyrus—from which our word “paper” is derived—and a method of ploughing the fertile grounds very similar to that used by many peoples to-day. There is in the Necropolis of

Memphis a scene showing two ancient Egyptians ploughing with oxen yoked to a clumsy wooden plough.

No one knows when the Nile cut its way across the desert, dividing the fertile land and forming what is now Egypt—the country that forms the northeast extremity of Egypt. McCabe places the time in the Neolithic (New Stone) Age, possibly 10,000 years ago. The monumental history, a rich source of information concerning early civilization, begins with Menes, the first Pharaoh.

Parallel with the ancient beginnings of civilization in Egypt is a similar beginning in Sumeria. The Sumerians, who are of doubtful and mysterious origin, shaved their heads, wore woollen garments and wrote on clay. They

fertilized their fields; they built tower-like temples; they were, in a word, a highly advanced and civilized people.

Among the first civilizations we must include that of the Phœnicians, a seafaring Semitic people of antiquity. Their colony of Carthage, which at one time had a population of a million, was founded before 800 B.C. But even before 1500 B.C. the Phœnicians had two great settlements—Sidon and Tyre—on the African coast. They were great traders and had a large trade in slaves, metals, precious stones, and woven goods with all the Mediterranean peoples. The Phœnicians were advanced in many arts, and they had an alphabet and system of picture-writing of their own.

Another of the oldest civilizations is the Chaldean. The Chaldeans dwelt in what is now a desolate valley on the western frontier of Persia. The capital of the Chal-

dean Empire was Babylon—named for the great ruler Babylon who engineered the Great Canal which, centuries later, was still an object of wonder. This Chaldean civilization followed the Assyrian civilization with its capital city of Nineveh. For many centuries power swayed between Nineveh and Babylon, wars were fought, sometimes the Babylonians and sometimes the Assyrians were more powerful. But finally the Medes and the Persians joined forces with the Chaldeans and in 606 B.C. took Nineveh.

The Chaldean civilization itself did not last very long. In 539 B.C. it collapsed before the attack of Cyrus, who founded the power of Persia.

To the southeast of Persia is India, another of the older civilizations. The ancestors of the Hindus appear to have branched off from the Persians, pushing north into India, conquering as they went, and finally occupying the whole peninsula. They seem to have entered the Punjab about 2000 B.C. A simple Aryan people, they tilled the land and herded the flocks. By 1000 B.C. they had a fairly advanced civilization.

Now let us leave India by way of Bombay and cross the sea into Arabia. Arabia is the peninsula to the southwest of Asia and is between Egypt and Persia. Commercial intercourse between Arabia and Egypt by way of the Persian and Arabian gulfs existed thousands of years ago.

Egypt is a land of monuments. Arabia is a land of men. But like the monuments of Egypt, the men of Arabia are unchanged. The Bedouin of the desert possesses the same mode of life, the same traits of character as were possessed by his ancestors.

Leaving the land of the Arabs, famous more for its horses than for its civilization, we advance north and enter Palestine, the land of the Palestines or the Philistines. This land was peopled originally by the descendants of Canaan, grandson of Noah, who divided the land among his eleven sons. The occupation of Palestine by the Canaanites continued for more than seven centuries. Be-

sides them there were the Philistines, descendants of Misraim from Egypt.

We must not forget to visit Abyssinia, the grand tablelands and mountains of ancient Ethiopia. We will find Abyssinia to the southeast of Egypt, an inland country. Civilization found an early start in this land, known to the ancients as Ethiopia. Its northern limits reached at one time to about Syene, and there was a very intimate connection between Egypt and Ethiopia in early times. Occasionally the two countries were under the same ruler. The arts and civilization of Egypt naturally found their way into Ethiopia, now known as Abyssinia.

The Abyssinians are a superstitious people. They have many curious customs which have somehow obtruded themselves upon the civilizations of other countries. As a kingdom, Abyssinia traces its royal lineage back to the Queen of Sheba.

Now let us sit on our magic carpet of fancy and fly into China, the land of time-worn customs and traditions. Here we find a people of great conservatism, and a civilization of bewildering antiquity. Here we find also a society founded upon filial piety—the teaching of Confucius; we find Buddhism and its countless followers; we find ragged remnants of aboriginal tribes. The Chinese are perhaps the most prosaic of all Asiatics. In many things they are our exact opposites. We could tarry long in this land of strange people—but see! The whole world beckons.

Browsing through Africa.—We have glimpsed the early civilizations. Now let us take a leisurely journey through all the countries of the world, as they present themselves, instead of skipping here across an ocean, there across a continent, jumping seas and bays and gulfs at random!

Let us start with Africa, since it cradled the first civilization. On this continent there are still many savage races—even many aboriginal tribes that have been untouched by civilization. At a very early period the Semitic, Ethiopic,

and Nigritic races emigrated into Africa—from the beautiful land at the head of the Persian Gulf—and traced their course down the Nile and the eastern coast of the continent.

Starting at Port Said, we glide down the Nile through Egypt and through the northern part of Abyssinia. Directly to the east we see Somaliland. Here we find remnants of the ancient racial stock known as the Hamite. Below Somaliland is East Africa—a land which is not particularly friendly to the traveller. But come! These remnants of ancient tribes are harmless. They are savages to us and we are savages to them, but they will not molest us if we do not try to interfere with their age-old customs. Zanzibar is on the coast, and its tribes are most interesting. How the people do love gaudy decoration!

Here we are in Mozambique, seat of an ancient kingdom. See how the Zambesi River cuts it clear in half. Along the shores of this river are remnants of the Native Empire. Suppose we chat for a moment with some Mozambique women. They tell us they have no grievances. They are equal with the man in every respect. They may sell, fish, barter, rule. They engage in the same occupations as the men, are exposed to the same hardships. And they like it—can conceive of no other arrangement.

These strange people who use live birds for ornaments are the Zulus. They are extremely superstitious and strangely gentle and kind for a savage race. They love dancing, as do most savage peoples.

Now we enter a great stretch of territory known as the Congo and inhabited by the Congo Kaffirs. This spot was once the scene of great slave-trade activity. The Congo Kaffirs are interesting people, are they not? They believe so absolutely in their fetishes and in their rain doctor. What a superstitious people they are!

But we are to visit some people now who are even more superstitious—people very little removed from their primitive state. They are scattered through Central and South Africa. As we go among them we realize that here are

the aboriginals—that civilization has swept by them without their knowing it.

Among these dregs of races we find the Hottentots and the Bushmen, both of which are supposed to be descendants of the tribes which first settled in southeastern Africa. Now, you see, they dwell for the most part about the Cape of Good Hope, having been driven into this section by the more powerful Kaffirs.

The Bushmen are a savage and cruel people. They are extremely small in stature, you see, and they seem very crafty; but the Bushmen have been found to be courageous, intelligent, and trustworthy. Despite their savage nature, they will die themselves rather than have injury done someone who is dependent upon them for protection. Bushmen mothers are noted for their devotion to their children.

Here comes a rather timid Bushman fellow. Let us ask him to entertain us. His dance is grotesque, weird, is it not? And how cleverly he can imitate the cries of birds and beasts!

The Hottentots were once considered the parent family, but it is now believed that these people are merely an offshoot of Bantu-Bushman blood. Like the main branch of the Bushman, these people have fallen out of the line of march and are still a savage and undeveloped fragment of mankind. There are some authorities who insist that we do not yet know the true origin of the Hottentots, that they are a superior race and may even have wandered southward from Egypt. But this has not yet been proved.

These Hottentot people who eye us so curiously are more intelligent than their Bushmen cousins. They are taller in stature, you notice. Some of them have embraced Christianity. These people have an extreme love of music and dancing, and they have included dancing in their ceremonies since the earliest times.

What are those three stalwart young Hottentots doing over in that corner? Let us investigate. Yes—they are

actually shaking dice! It is good of them to let us examine these dice. They are made, you see, of the bones of animals. It is an old custom among the Hottentots to shake dice to discover what their success will be in warfare.

Leaving the interesting Hottentots, we come to another remnant of the Bushman family—the Bechuanas. These people are also South African aborigines. There are also the Senegambians, who are zealous merchants and who have a curious way of combining business with religion. And there are the Negroes of Upper Guinea, who are savage and superstitious and have many fetishes. They love display and gaudy ornamentation. Their celebrations, at both weddings and funerals, are weird, noisome, primitive.

Crossing North Africa we meet a wandering tribe of Berbers—the “bandits of the desert.” They are reputed to be cruel, suspicious, and very treacherous, but do you wonder at it? They were driven from their fertile territories along the great Mediterranean Sea, into the Atlas Mountains, into the Sahara Desert. They were scourged by the Romans, the Vandals, the Arabs, the Phœnicians. But they are still Berbers of pure blood and proud bearing, and though they look upon us with suspicion and hatred, we can find it in our hearts to admire them.

There are many other tribes in Africa. We cannot possibly visit them all. There are the Pygmy tribes and the tribes of the Bantu group; There are the Namaqua and Koranna who belong to the Hottentot family. There are the pure Negroes and there are the tribes of Semitic and Libyan extraction. Wherever we go we find fetishism, superstition, and overwhelming fear of the unknown. Old customs and traditions remain; no one has the courage to tear them down.

Good-bye, Africa, land of the aborigine! We are off to visit the Islands of the Indian and Pacific Oceans.

The People of the Islands.—Here we are on the great island of Madagascar, directly opposite Mozambique and

only a few hundred miles from the African coast. Wasting no time, we go directly to the central province and meet the Hovas, a people of great antiquity and rich in rare traditions.

And now across the Indian Ocean to Sumatra, to Java, to Borneo, to the Philippines. We wander among the old Malayan tribes and find remnants of ancient religions, queer marriage and burial customs, strange fancies and beliefs. We linger for a while with the savages on the Andaman Islands in the Bay of Bengal and marvel at their age-old customs and ceremonials.

Sailing below the Equator we come at last upon New Guinea. These people who gather in silent groups to greet us are the Papuans. Notice the crispness of their hair; it grows in tight, separated ringlets. It is said that to arrange these ringlets into one huge mop at the top of the head, the Papuans invented the comb.

Now we're sailing through the Pacific, to the island of the Polynesians. We find these people on the Hawaiian, Fiji, Samoan, Friendly, Caroline, and Marquesas Islands; and as we linger a while among them, we come to understand the origins of many of our customs.

The most savage Polynesians we meet on the Fiji Islands. Until recently they were cannibals. Even to-day they have very little regard for human life, and it is whispered that cannibalism and human sacrifice still exist in certain secret ceremonials. The men on these islands do not tattoo their bodies but paint them.

Among the Fiji Polynesians a curious system of caste exists. A man's dignity and standing is judged by the number of wives he has. There is a low society and a high, and the two are as distinctly separated as the low and high society of civilization.

Let us visit a group of Polynesian people who are more civilized than the Fijians. They are on the Friendly, or Tonga, Islands. The islands, you notice, are well named. The natives are indeed friendly; they welcome us with offerings of food and send their chief to greet us.

On Samoa Island we find a race of warriors. The natives are passionately fond of flowers, and both men and women always have a flower behind the ear. The Polynesians, we discover, have no very definite religion, but we realize at once how grossly superstitious they are. They firmly believe in their amulets, charms, and fetishes. They have an elaborate system of tabu.

With a little thrill of anticipation we embark for the Hawaiian Islands. Here we will find some old and fascinating customs! Here we will hear of some ancient legends and traditions! But we find these islands more civilized than any others in the group of the Polynesia. There are twelve islands, constituting a kingdom and governed by a native. But we find many native superstitions still existing, many native customs still observed. Custom and superstition do not die easily.

In the Polynesian group we find Society Island and Cook Island. We browse for a while in picturesque Tahiti, made familiar to us by the paintings of Paul Gauguin, who lived and died among these people and whose dust lies somewhere beneath our feet. No one knows where; the grave was never marked.

Another picturesque island, made familiar to us by O'Brien in his "White Shadows in the South Seas," is Marquesas. The Marquesans are a friendly and hospitable people. We dare not refuse the breadfruit they offer us, for that would seem to them an insult. This breadfruit and the milk of cocoanuts constitute their diet, with fish added in the fishing season. The Marquesans have many old legends and superstitions, and it is curious to note that they have a deluge myth. As we sit upon the *paepae* in the shade of the trees they tell it to us. And as we listen we realize that here we have struck the origins of some of our very own customs!

Leaving the friendly Marquesans we come to the Maoris, the primitive inhabitants of New Zealand. The Maoris have had practically every superstition, passion,

vice, custom which we attach to savagery. For that reason, and because they cannot survive the approaches of civilization, these people are doomed to an early extinction.

The Maoris are cannibals. But as has already been indicated (see p. 50) they cannot be accused of deliberate cruelty or conscious torture. To them flesh was food, as it still is to-day. They "eat their man" but they kill him before they cook him. It was recently reported that a trade in human flesh actually existed among these people, now unable to indulge in cannibalism openly. The desire for human flesh in the Maoris is in some instances as strong as the desire for opium.

From New Zealand it is not so very far to Tasmania. This island, known at one time as Van Diemen's land, is only about one hundred and twenty miles from the coast of Australia. The Tasmanians are extinct now, but let us visit the island, anyway. Perhaps we can find someone who will tell us of the traditions and customs of these people.

And from Tasmania, you know, it is just a step across the channel into Australia, the museum of antiquity.

A Journey through Australia.—Australia is the only continent which is entirely in the southern hemisphere. It includes New South Wales, Victoria, Queensland, South Australia, Western Australia, and Tasmania.

Wonderful treasures of facts and inferences have been extracted from Australia. The dwellers in the interior are savages, untouched in many instances by civilization, and observing to-day customs, rites, and ceremonials that are centuries old. It is because these people have survived but little changed throughout the ages that the modern investigator is able to learn from them much that is useful and enlightening concerning the origins of certain customs.

Now that we are here in Australia, we can understand to a certain extent why early civilizations did not begin here, could not thrive here. In a prehistory when there

were no powerful ships, when man had no means of knowing where he was or how far from the opposite shore, Australia was cut off from all the rest of the world. Egypt had communication with Abyssinia, with Arabia, with Persia, with India. Having planted its first seeds in the soil of Egypt, civilization spread quickly, and we find old races falling and new ones rising up to take their places all over the world.

But Australia was alone, cut off from the world. Perhaps some wandering tribes reached it by way of New Guinea and the Torres Strait. But on the whole it has been the aborigines—the native, primitive, original races—who have lived and fought and intermixed and bred in Australia.

As we journey through this continent we are amazed at the amount of superstition that exists. It is very probable that the native Australians are the most superstitious people in the world. All their customs are tinged with fear of the supernatural; the very history of the country is written with the gloomy pen of superstition.

Let us sit for a moment on this peculiarly notched stone and listen to the tale that our guide tells us. He is not a native—if he were he would never sit on this stone. The natives believe it to be the home of an evil spirit who haunts the graves of the dead. But our guide merely shrugs his shoulders, grins, squats on the sacred stone, and beckons for us to follow. And he tells us this tale.

Many years ago a party of convicts escaped from a prison in Victoria. They wandered far into the country, but unlike the native savage they were unable to wrest food from nature. All perished except one. Journeying still further into the interior, half dead from exhaustion and lack of food and water, he came at last upon a grave. With the body had been buried food to accompany the spirit into the next world, and the spears of the deceased. The convict realized at once that this was the body of a chief who had just died and been buried.

He partook of the food—a crime punishable by death at the hands of the natives—and took the spears as a means of self-defence. As later developed, they served a far more satisfactory purpose.

Leaving the grave and wandering down the bank of a river, the man came upon some members of the tribe who had just buried their chief. Recognizing the weapons and believing the white stranger to be the “honoured chief jump-up” (resurrected) they fell upon their faces and welcomed him as the new chief.

The convict made the most of this opportunity and played upon the superstitious minds of the people. He was adopted and lived with the tribe for thirty years, ruling them with kindness and wisdom but obtaining from them the utmost respect and obedience.

“And that,” said our guide with a flourish, “is the kind of superstition that still exists upon this continent. All these natives—every tribe you meet on your way to the coast—are guided by superstition first and reason last.”

Which we find to be absolutely true as we continue our journey to the coast. We meet many savage tribes, and as we marvel at their curious customs and beliefs we cannot help wondering what *they* would think if they were suddenly transplanted to the heart of New York City!

Through Asia.—As we leave Australia and journey up through the Indian Ocean, we come to Ceylon, an island to the southeast of India. We stay for a while with the Ceylonese, learning much about their customs and beliefs; and then we cross into India, to begin our ride across the vast Asiatic expanse.

Archæology in Asia is in its infancy, and the beginnings of Asiatic civilizations are still obscure. We know, however, that commercial intercourse existed between Egypt and India at a very early date, and probably some of the early civilization of the Egyptians seeped through to India.

In India we are impressed by the complex system of “caste.” The Brahman must not pollute himself by mingling with or touching the lower classes—the “outcasts.”

Going westward we meet the Siamese and the Burmese, and come across many aboriginal tribes. These people have changed very little; they still observe the old rites and ceremonies of their ancient ancestors.

Now we enter China—queer, fascinating, age-old China with its narrow streets and its rich temples and its solemn, majestic idols—the China we find it hard to understand because so many of its customs are the exact opposite of ours. Stand aside for a while and watch this strange procession. It is the trousseau of a bride being carried to her new home. There are foodstuffs in those baskets, and furnishings for the new home, and gaily embroidered jackets. It would be fun to see the bride. Perhaps she is not so very different, after all, from our own bride. But we will meet her later. Let us hurry on, now, to Japan.

We are instantly impressed, in Japan, by the superstitions of the people. They tell us many rare old legends and traditions to which we could listen forever—but we must hurry across the frozen stretches of Siberia, the country which occupies the whole of Northern Asia. This vast stretch of land extends from Turania and the eastern Asiatic plateau to the Arctic Ocean, and from the Ural Mountains to the Pacific. The Siberians, we find, are no longer barbarians but show the influence of Russian and Chinese civilization. But we can still find a hoary old native who knows all the traditions of the land.

Crossing Siberia quickly, we come to the Caspian Sea and cross into Persia. We meet a Persian nomad and he tells us of the customs of the country. The women, we soon discover, are remarkably clever, but they are superstitious, also, and they will not ignore the customs that have been handed down to them. Next to Persia are the Afghans—a most hospitable people. If there is food in Afghanistan no one need go hungry, no matter how poor he may be; the people will share their last morsel. They are particularly cordial to us, who are strangers, and they beg us to partake of their very best.

From Persia we cross into Turkey, the land of the Tartars. The northern routes of travel from the Caspian Sea to India, via Herat, are still in the hands of the Tartars who are probably the descendants of the savage Huns who, history tells us, spread ruin and desolation over a great part of the ancient world.

We notice, while we are in Turkey, that the veil is to some extent disappearing. But most of the people adhere tenaciously to their old traditions and customs. We wander by the old mosques and wonder who built them, and when. We are curious to see a harem, but our guide tells us it is forbidden. We meet Hebrews and Syrians, Kurds and Armenians, Arabs and nomads. We see crazy huts where no civilized person would want to dwell, and near by we see splendid mosques that lift their faces proudly to the sky.

And so, coming down through picturesque Arabia and out into the Arabian Sea, we complete our Asiatic journey.

We see at once that we have made a mistake. We should have gone through Arabia first, then through Turkey and north into Greece. Here we are in the Arabian Sea, whence our next journey should be through Europe; but this being the age of miracles, we merely hop into a 'plane and are whisked across the Red Sea, across the Mediterranean, to Gibraltar!

Glimpses of Europe.—Our first trip is through Spain and Portugal. We are delighted with the beautiful old gardens of Spain and listen enraptured while our guide tells us about the rare relics that have been unearthed at Carthage. Here and there we see the influence of the Roman and the Celt. And we meet a caravan of colourful Spanish gipsies who dance for us the sinuous dances of their forefathers and tell us beautiful old legends that have been handed down to them through many generations.

We leave Spain with regret, but come with joy and pleasure into France. Here is the birthplace of Fashion. Here is the country where culture made its greatest strides. Here is the land of the guillotine, and the *sans culotte*, and

the *causerie*. These are the streets where French dandies made merry and here is the little town made famous for its exquisite tapestries. Shall we wander into Normandy and chat for a while with the peasants? What a wealth of romantic folklore they have. It is with regret that we leave them and go at last into the huge boot that is Italy.

But our regret does not last long. We are soon completely beneath the spell of beautiful old Italy. Let us first go through the Catacombs—the vast, underground tombs that house the ancient dead. But let us remain close to our guide; it would never do to be lost here! Now we will visit the buried cities and contemplate the forgotten civilizations that lie beneath our feet. You are restless. You want to see the Pantheon, the Vatican, Rome! You want to see Venice rising from the sea. You want to visit Milan, and Pisa, and Sicily.

Having browsed through Italy to our hearts' content, we cross the Alps into Switzerland and wander through the quaint, simple villages. Here we find a great love of sports. And we see lake-dwellings that somehow take us back over the centuries and make us think of primitive days.

Now we are in Germany, land of great universities, scientists, and leaders, land of inimitable folklore and mythology, land of the Rhine and the Lorelei. We hurry through Berlin, through Hamburg. We marvel at the examples of high caste and low caste that we see everywhere around us. There are two distinct societies—a high and a low—and they are kept strictly apart.

Let us hurry through Austria, through Bulgaria, through Serbia, through Roumania, through the Netherlands so that we can come at last to Greece. Here is a country that serves as a link between the old and the new. The Greeks were for centuries the nucleus of the world's best literature, architecture, thought. Poets still acclaim the "glory that was Greece." Athens still retains in ruins some traces of the masterpieces of architecture and sculp-

ture which characterized her former splendour. You seem to feel this, do you not, as you stand in the shade of the Acropolis?

We must stay a little while in Greece—a week-end at least. There is so much to see, so very much that teaches us about ourselves. The museums of Athens are rich in antiquities; we shall visit and examine them all. And there are the Parthenon and the great temple of Minerva—was it not worth this journey across the world to see them?

Before we leave Greece, we must learn all we can about its folklore, the teachings of its early philosophers, its Olympic games. Our guide tells us of the ancient wedding customs and burial customs. He knows all the legends and traditions. Wonderful Greece! Beautiful, classical, enduring Greece! Your glory and grandeur can never be erased from the pages of time.

What is that island to the south of Athens? Our ship draws near and we see that we are approaching Crete. The pick of the archæologist has scarcely scratched the surface of this mysterious island. Who knows? Perhaps some day it will be proved that civilization had its first and most illustrious start here, passing north into Greece and south into Egypt. Authorities believe it possible. And the recent Cretan excavations make us wonder.

Let us now cross back to Constantinople, across the Black Sea to Odessa—and Russia. We are in a gigantic land. We meet Slavs, Cossacks, Circassians, Georgians, Hungarians, Bohemians. We see many forms of religious worship, and are surprised to see ancient forms of image worship still practised in certain sections. The people who just passed us on the road are peasants. They live in small, sometimes one-roomed houses. They represent one class of Russian life; the government and the wealthy people represent another.

Russia extends westward to the Ural Mountains which separate Europe from Asia. If we were to continue west-

ward we would probably meet some of the strange wandering tribes of the frozen regions of the Arctic. Among them are remnants of the Tartars and the Mongols, and there are, of course, the Samoyeds, who still cling to their ancient religion. This religion is a bewildering combination of witchcraft, spiritualism, idolatry, and sacrifice. Neither Russia nor China has been able to change the mode of life of the Samoyeds. They cling to every tradition and custom that has been handed down to them, and they live in the old manner of their ancestors.

We are now in the Arctic regions, near enough to visit the old Scandinavian countries—Denmark, Norway, Sweden. These countries are peopled by men who like to believe in the mysterious and the supernatural. A mass of traditional lore—impressive and picturesque legends—has been bequeathed them by their forefathers, and they accept all this lore as truth.

Iceland, Finland, and Lapland have also a wealth of folklore and tradition. We travel through these countries quickly, finding not a moment dull. The Lapps, we notice, are the most round-headed people in Europe. Let us talk to that mother with her round-headed baby. Our guide will act as interpreter. This is what he tells us: when a Lapp child is born a reindeer is set apart for him. This, with its progeny, forms the foundation of his future fortunes and he never can be wholly without property. Only for a boy child? we ask. No, no, indeed, the mother hastens to assure us. Her child is a girl, and she has put aside two reindeer, if you please! A sensible way of starting a trousseau, we decide, as we continue on our way.

To conclude our European journey, we cross the North Sea into Britain. The Britons belong to the Aryan races. The term "Aryan" means noble, of good family. It is a Sanskrit word and is believed to have come from the root *ar*, to plough. This same root is found in the word *era*, which is Greek for *earth*. The Aryans, because they ploughed the ground, considered themselves the noblest of

human races; and eventually the word itself came to signify that which is noble and honourable. Various European countries are included under the Aryan races. Most historians, however, use the name Indo-European which means exactly the same as Aryan and conveys a much clearer idea of the races included therein. We have visited all the Aryan races with the exception of the Britons.

England is the land of the lord and the lady, of the vassal and the peasant, of nobility, feudalism, peasantry. It is the land of Shakespeare and of Dickens, of King Arthur and Robin Hood. There is probably no other country that has so largely influenced our own manners and customs, although we ran away from all that was England and English.

The Irish, Scotch, and Welsh have also influenced our customs. These people are rich in tradition, and their customs are very largely concerned with the observance of these traditions. How threads of tradition from Great Britain crossed the ocean and patterned themselves into American life will later be seen.

Off to the Newer World.—History likes to speak of America as the "New World." It is new, indeed, if one judges only by the written records. America has no written history, no written records whatever, previous to its discovery in 1492.

Nevertheless, we have every reason to believe that the native American races—the Indians, as they are familiarly known—have a great antiquity. No one knows precisely when the Indians separated from the main branch of mankind, but J. W. Dawson says man very possibly reached America before the mastodon disappeared, indicating that there was an ancient American population of which very little is known. If this is true, and many authorities believe that it is, there was an ancient American race coeval with the oldest cave men of Europe. Like the cave men, these people possibly were swept away before the advent of the more modern races.

An interesting conjecture is made by Daniel Wilson in his "Prehistoric Man." He assumes that during the early primitive scattering of the infant races, the Mongol and the American went eastward, and the Indo-Europeans went westward. They met after an interval of thousands of years, coming from opposite directions and having made a complete circuit of the world.

One of the most conclusive proofs concerning the antiquity of man in America was the finding of fossil human remains estimated to be not less than 10,000 years old. ("Types of Mankind," Professor Agassiz, p. 352.) These remains were found in a calcareous conglomerate of the coral reefs of Florida.

The name "Indian" was given to the American aborigines by Amerigo Vespucci, after whom the country itself is named. He believed, as did many others after him, that Columbus had reached the eastern shore of India and that the inhabitants were therefore "Indians."

Aren't you eager to make your journey through this land of the Indian, our own America? Let us leave at once, and starting with Alaska (the doorway through which the Indian entered, according to some authorities) trace our course through the North American continent.

From Alaska to Panama.—Who are these strange people we meet at the very doorstep to the American continent? They are the Eskimo, our guide tells us—an Indian people who inhabit the arctic coast of America from Greenland to Alaska. The Algonquins gave them their name, he informs us. They called these people Eskumaget, which means "raw eaters."

The Eskimo call themselves Innuít which means "men." They are untouched by any foreign influence; their tales and traditions extend back for thousands of years. The women do the hardest work and are the slaves of the men, not even being permitted to eat in their company. In summer the Eskimo live in conical skin tents; in winter they usually live in half-underground huts of stone, turf,

earth, and bones which are entered by long, tunnel-like passages. These passages can be traversed only on all fours.

We need not traverse the great distance along the upper coast of Canada to Greenland, for we will meet only this same type of people. The Eskimo are found in broken tribes from East Greenland to the western shores of Alaska. They are never far inland. They are divided into Greenlanders, Labrador Eskimo, the Iglulik or Central, and the Western.

How do these people live? we wonder as we gather around a roaring fire. The country allows no cultivation. The ground is almost perpetually frozen. There goes a fellow with his spear—let us ask him. Sometimes they hunt, he says; more frequently they fish. Most of their food comes from the water. That, then, is why we do not find them far inland.

Let us leave this land of Arctic nights, of snow and ice and primitive people. Going down through Canada we find remnants of the old Indian tribes: the Algonquins, the Chippewas, the Flatheads, the Navajos; but they are fast disappearing, and only now and then do we meet a real full-blooded Indian who knows all the legends and traditions of his people.

In the United States we find it still more difficult to encounter any full-blooded Indians—except on the reservations set aside by the Government. We visit several such reservations but leave strangely disappointed. The Indians have been Americanized, we tell one another. They are not true representatives of their race.

America, and particularly the United States, is unique among the countries, as we very quickly discover. To this continent have been attracted the people from practically every corner of the globe—the French, the English, the Irish, the Dutch, the Spanish, the German, the Italian, even the Chinese and the Japanese have left their native lands and made their homes on these shores.

Among the tribes of North American Indians whose customs have contributed to those we shall discuss in the pages that follow are the Apaches, the Sioux, the Cheyennes, the Dakotas, the Arapahoes, the Shoshonees, the Utes, the Kiowas, the Pueblos, the Hurons, the Iroquois, the Cherokees, the Creeks, the Seminoles, the Choctaws, and the Chickasaws.

Shall we visit the Great Lakes before leaving the United States? Here we are—right at the edge of Lake Michigan. This was once a great Indian territory, you know. Not so very much indication of it now, is there? But perhaps our guide will be able to find the spot where an old Indian totem pole stands. Yes, he finds it. At least four hundred years old, he says. What weird, grotesque figures, yet each little line and curve had a distinct meaning to the Indian race that worshipped it.

We are off for Boston, home of our Puritan fathers. This bustling town was the first centre of culture and civilization in the "New World." Many of the traditions and customs of the "New World" were cradled here. Town of memories, of traditions, of freedom's first note!

And here is New York, great melting pot of the world! Here custom is made for the rest of the nation. Here is a people curiously free from custom and tradition, yet as custom-bound and as tradition-bound as any native Indian tribe! Here is a city that is a little world in itself, yet that has borrowed its customs, its manners, its very people, from every corner of the globe. Here we find caste, and culture, and progress, and religion, and superstition—a little bit of everything that we have found in our journey around the world.

Good-bye, New York! We are off for Mexico where progress has not been so rapid and where we can still find traces of primitive peoples.

An old man stops us on the road. Do we want to hear of the old deity Quetzalcoatl? And of an ancient, lost civilization? We are delighted and we ply the man with

questions. He takes us to a place near Palenque and shows us the great white temple dedicated to Quetzalcoatl. It is still and desolate, here in this wild, subtropical country; the temple has not known the sound of human voice for generations.

We enter, awed and silent, as though we stand upon the threshold of some great discovery. Our old man of the road seems a prophet in his ragged clothes. He tells us that the temple was erected, not to some fanciful idol or creature of the imagination, but to a man who actually lived and laboured among his people. He taught them how to smelt and forge metals, how to write, how to cut precious stones. He even taught them a code of manners. But a stronger, cruder people came and wiped out this infant civilization.

We go out into the glowing noonday and our old man shuffles away. He refuses the gold piece we offer him.

Our guide amuses us with fanciful tales of Mexican grandees. He has a wealth of Mexican mythology which he gladly relates. He tells us of the Aztecs. We wander through the rocky, picturesque land, coming here and there upon remnants of early peoples who seem entirely untouched by any civilizing influences. They still live in the manner of their forefathers and appear quite satisfied with their lot.

Leaving Mexico we come to Guatemala, that part of the continent which lies between Mexico and Colombia and which is now designated as Central America. It comprises the British Honduras, and the six independent republics of Guatemala, Salvador, Honduras, Nicaragua, Costa Rica, and Panama. Here, too, we find remnants of several old tribes, in their native state and untouched by civilization.

From Panama to Cape Horn.—Having browsed so long in old worlds and among primitive peoples, it is a curious treat to come to the Panama Canal, engineering triumph supreme. We gaze at it with awe and pride, and we can-

not help remembering the Kaffirs and the Hottentots and the Namaquas we have visited.

Stretching below the Panama Canal lies the continent of South America. The peoples we shall meet are the Patagonians, the Brazilian Indians, the Amazons, the Caribs and the Arrawaks, the Mozcas, the old Incas, the Chilians, the Ecuadorians.

We go through Colombia and Venezuela, through Guiana and Ecuador. Everywhere we see traces of superstition, we see people bound by the customs handed down to them through long generations. We go through South Brazil and come upon some aboriginal tribes; we cross Bolivia and enter into Peru.

We stand now upon the ground where the Incas fought the Spaniards, where Pizarro tried to teach Christianity to the proud and haughty Inca chief, Astahuallpa. Here was the great massacre of the Inca hordes—the wiping out, by the Spaniards, of a gentle and advanced people. Our guide shows us the wall where the first Inca fell.

Meditating upon the sad fate of the Incas and upon the greed which caused exquisite goblets, ewers, and vases to be melted for their gold, we leave Peru and wander through the narrow strip of land that is called Chile. Gone are the native tribes; the old order has given way to the new. We come upon bustling seaports and come only rarely upon a true native who can tell us of the Chilian customs and traditions of other days.

To the west of Chile is Argentina with Patagonia at its southeastern extremity. From Patagonia come several of our popular customs which are later to be discussed. And in Patagonia we can still find primitive tribes in their native state, although they are quickly becoming extinct. The Patagonians are believed by many to be the tallest known people and the few we meet seem to carry out this contention.

Now north to Uruguay where we chat for a while with some keen, stalwart natives. And farther north into

Paraguay where we meet natives of another sort—canny, suspicious, tradition-bound, as natives are everywhere.

So ends our journey around the world. You are back, now, where you started—New York, if you live in New York; Portland, if you live in Portland; Springfield, Oshkosh, Memphis, or wherever you happen to be.

You know now the area from which our customs, traditions, superstitions, and lore have been culled. You have met, in their native lands, the people who will tread their way through the pages that follow. Man and the world are revealed before you.

CHAPTER III

ORIGIN AND DEVELOPMENT OF ETIQUETTE

Out of the past we have come. Into it we are constantly returning. Meanwhile, it is of the utmost importance to our lives. It contains the roots of all we are. . . . It contains the record or ruins of all the experiments that man has made during a quarter and a half million years in the art of living in this world. —CASSIUS J. KEYSER.

THE FIRST HUMAN RELATIONSHIP

“ETIQUETTE,” says Mrs. Lydig Hoyt, “really means civilization—life as we live it to-day as distinguished from what it was in the days of the primitive.”

We hope that by this time the reader has gained a clear and definite conception of what civilization really is, what it means, how it started, how it developed through the long ages of life. Etiquette is just a thread drawn through the many-coloured fabric of civilization. An important thread, of course, since it helps hold the fabric together; but by no means the only thread.

“Just try to imagine what our life would be like without etiquette!” pursues the author from whom we quote. “It would mean, for instance, more difficulty in boarding trolleys and subways, in driving automobiles. We’d all still be eating with our hands only and goodness knows what other things we would be doing!”

To this writer it seems that we would be doing precisely what man has been doing since the beginning of time. We would be inventing our etiquette, creating it in our daily life, living it. Etiquette, if regarded simply as ceremonial, is just another word for pride or caste. But if regarded as custom, habit, as the accepted mode of life, it becomes—

as it actually is—a fundamental factor in the evolution and development of man.

And by “custom” we do not mean the custom of the moment—the fashion or the whim of popular fancy. Since the very dawn of life man has had habit forced upon him by various external influences—the conditions under which he lived, the forces with which he had to contend, the instincts which he blindly obeyed. Thus did his mode of life induce special habits.

These habits passed into custom; custom passed sometimes into ceremonial, sometimes into religion, frequently into law. Custom, then, as we interpret it, means the habits of life as observed by mankind throughout its existence—the things we do, and say, and feel without stopping to think about them.

Taking etiquette in this broader, truer sense, let us trace it back over the ages and see how it served as the first human relationship. What were the first rules of etiquette, which means, in other words, the first laws of life, the first habits of man? When did they start, and how did they spread?

Primitive Etiquette Based on Fear.—In his primitive state man feared more than he reasoned. He feared the huge animals that roamed everywhere, and he found himself a safe home in some cave, rolling a stone against it at night to keep out intruders—the first door. He feared the elements and tried to read the stars—the beginning of astronomy. He feared unknown beings and wore the teeth and claws of animals he had killed to warn these beings of spirits that he was strong—the beginning of charms and of ornamentation.

But more than anything else, perhaps, man feared his own kind. Man was easy prey to man in those days, and food was sometimes scarce. It became one of the first habits of life, therefore, to carry always a crude club as a weapon. Fancy leads us astray, for a moment, as we contemplate the sword which followed the club, and the cane

which followed the sword. Don't you, in your own circle of acquaintances, know someone who never feels quite comfortable and at ease unless he is swinging a cane?

Fear, then, is one of the first instincts which shows its influence upon the habits of man. As soon as our savage ancestors met each other, they growled; and having growled, they raised their clubs; and having raised their clubs they fell upon each other. "To the victor belonged the spoils," and it usually happened that one of the fellows was hungry.

Man, however, reasoned as well as feared, although fear came first. Sometimes two savages would meet, and neither being hungry nor particularly frightened, they would eye each other, make a wide circuit, and disappear in opposite directions. Reason spoke. Why kill each other when both were well fed, when each was satisfied to pass on without injury to the other?

At another time, perhaps, they would come upon a great beast of the jungle—both at the same time. The instinct of self-preservation strong within them, they would fall together upon the beast and between them kill it with little trouble. Reason spoke again. Two could kill a beast more quickly and with less trouble than one—then why not hunt together? Why not be friends instead of enemies?

This occurred not to one man, but to many men in many widely separated places. Thereafter, when one savage fellow met another with whom he wished to be friendly, he held out his bare right hand—the weapon hand—as a symbol, or sign, of peace. The other fellow understood; symbolism is the simplest language of mankind. They joined forces, hunting, eating, and probably living together in the same cave.

The custom of holding out the right hand as a sign of peace, or welcome, or greeting, still exists. Our hand-clasp very possibly had its origin in this age-old custom. And you see, don't you, how it grew out of fear; how it

was a habit of life forced on early man by the conditions under which he lived.

The Early Need for Friendliness.—In a world peopled with strange creatures of fancy and haunted by terrifying beasts, primitive man soon found a certain comfort in association with his own kind. The lone huntsman became a clansman, and in the clan were formulated the first laws of primitive society.

It is easy to see how the clan originated, or gathered, around the strongest and most powerful fellow in the vicinity. He became the head clansman, the chief. Mr. Strong Man, we shall call him. He would be proud of his power, disdainful of the weaker men about him. He would have possessions that were tabu to the others.

And Mr. Strong Man, conceited as man has been since the beginning of time, would demand some visible signs of fear and subjection from the men he permitted to join his clan. If they wished to hunt with him, join in the great feasts with him and find protection and comfort in his clan, they must be subservient to him. In other words, they must salute him as their superior.

Thus out of fear for Mr. Strong Man, mingled with a desire for friendliness, evolved forms of obeisance. This was probably the very earliest appearance of caste, or social differentiation.

Few of the ceremonial customs of courtesy which we observe to-day have originated in recent times. Most of them are vestiges of the past; they have grown out of the slow evolution of social life. And most of them are traceable to their genesis and early form, as we shall presently see.

The First Forms of Obeisance.—Early man realized that if he did not sufficiently honour Mr. Strong Man certain dire happenings would follow. Therefore he took pains to show his respect, to show that he realized Mr. Strong Man's importance.

One of the earliest forms of obeisance was kowtowing.

The word derives from the Chinese k'o-t'eu, a term meaning "to knock the head on the ground." Kowtowing, as a method of saluting a superior, was known not only in China, but was a widespread custom throughout Africa. The king of the Brass people, they tell us, never spoke to the king of the Ibos without acknowledging his inferiority by getting down on his knees and striking his head several times against the ground.

The Egyptians had a similar custom known as *senta*, which means, literally, "breathing the ground." To do homage to a person of importance they would fall to the ground and kiss the earth. The Coast Negroes, possibly borrowing the custom from their Egyptian neighbours, were accustomed to prostrate themselves before superiors and kiss the ground three times. On the lower Niger the people fell to their knees and struck their foreheads against the earth.

Many forms of obeisance, still in use to-day, evidently had their origin in acts to show absolute submission. These forms would be used in times when all chance of escape was gone, and having become a habit would gradually grow into custom. Thus among the Sandwich Islanders even to this day falling on the face is a mark of respect, originating, no doubt, as a mark of submission.

Among the North American Indians it was the custom for two people, when they met, to sit down about twenty yards from each other and simply look at each other without speaking. After a few minutes they would rise and walk on together. But if a person of importance approached, the other fellow would sit down and remain seated while the other passed on. To remain standing would have been a breach of conduct and the offender would very likely have been punished.

Thus were forms of obeisance and homage originated to flatter the vanity of the strong men, the chiefs, the leaders of tribes and clans. And thus, also, was born

caste which has probably had more influence upon our manners and customs than any other one factor.

CASTE AND THE CREATION OF CODES

The influence of caste has been felt by mankind since the earliest times. Wherever there have been men with more skins, more wives, more earthly possessions than others, there has been caste. Wherever there have been men with more brute strength and consequently more power than others, there has been caste. Wherever there has been nobility, and peasantry, and fashion, and wealth, there one is sure to find evidences of caste.

And caste brings custom. Those who belong to the upper—the more powerful or influential—castes, demand homage and recognition from those beneath them. Cyrus, we are told, beheaded two of his inferiors because they omitted to place their hands inside their sleeves, when saluting him. And Charlemagne, you remember, pleased his vanity by forcing subject kings to serve him at table.

Caste forms grades or classes of society. It separates one whole society of mankind into many stages or levels, into many kinds of societies. In other words, caste divides. And as it divides, it brings into being certain ceremonials. These ceremonials in time become customs. And these customs, be it noted, bring together again, consolidate, standardize. It is a complete cycle: caste—custom—society—and caste again.

The first definite instances of caste centre about royalty. The word king itself represents a definite grade or caste of society. We cannot think of the word without immediately associating it in our minds with ceremony, pomp, power—caste.

Royalty has always been surrounded by pomp and ceremonial from the cradle to the grave. Every monarch, no matter of what date or country, has called upon his subjects for marks of respect and homage. There would be a strict

hereditary etiquette, handed down through one royal generation after another.

Out of this royal ceremonial would naturally grow certain forms and certain restrictions. These restrictions would serve to frame in and emphasize the separateness of the royal person and the inferiority of his subjects.

The Food Tabu.—It is related that when the King of Persia gave dinner parties he himself sat at a separate table in another room where he could see his guests, but where he would be unseen by them. This is a custom of great antiquity.

In primitive times it was believed that evil could enter the body with the food. As the king had enemies who envied him his power, he took extraordinary precaution. No one was permitted to touch his food, and no one was permitted even to see him eat it.

Thus if any man or beast saw the King of Loango eat, that man or beast was instantly put to death. A tradition says that the king's own son was killed for this reason. Similarly, it was a capital offence to see the King of Dahomey at his meals; the King of Tongo ate in secret; and the King of Abyssinia never permitted any one near him when he dined.

Having established this tabu for superstitious reasons, kings, priests and men of power continued it and carried it to extremes because they realized that it separated them from the inferior classes or castes—gave them a certain importance. And presently we find the tabu of not eating together spreading among other peoples outside of royalty and becoming one of the main features in certain systems of caste.

In Tonga, for instance, there are ranks and orders that cannot eat and drink together, no matter what the occasion. In Uripiv (New Hebrides) the males are divided into ten "castes" which are determined by age, and these castes may under no circumstances eat with one another.

The same custom is found among the Hindus, a people

of many caste separations. The Paharias regard themselves as superior to the Keriahs and will not eat or drink with them. The young Bedouin boy shows deference and respect to his father by refusing to eat in his presence. Members of different castes will not eat food that has been cooked in the same vessel. To eat together is one of the "grand tests of identity of caste" among the Hindus.

In New Zealand it was forbidden the slave to eat with his master, just as to-day, among some Eskimo people, it is forbidden the woman to eat with her husband. The Atiu Islanders refuse, to this day, to eat with the missionaries; and the Papuans will not eat food that a European visitor has touched.

And so it continues, one people after another creating castes within their own communities and establishing restrictions to emphasize their own power. And so it will continue until the end of time, as long as there are different castes or grades of society.

The food tabu may seem strange to us. Yet in modern life many instances of "unwritten laws" against eating together can be pointed out. In England the servant who drinks his master's champagne or sits at the table with him outrages all sense of caste propriety. And there is a caste consciousness even among the servants, for the upper servant refuses to eat with the others.

Nor do we have to go to England to see modern examples of the food tabu. Where is the wealthy American who will dine with his chauffeur in public, no matter how democratic he otherwise may be? And where is the chauffeur who will want to dine with his employer? He will feel embarrassed, ill at ease, conscious of the fact that he is out of caste.

This caste consciousness exists, whether we will admit it or not. We cannot escape it. It is a part of our primitive personality, just as is the desire to imitate, or the love of the magical and the mysterious.

Between the Sexes.—The difference between the sexes

has always been a basis for caste. In primitive life, the woman was subordinated. Because she did not fight side by side with the warriors, because she did not hunt or fish and therefore had to depend upon the men for food, she fell into a lower social position.

Here again we find the food tabu. In many African tribes it was a capital offence to eat with a woman. Even to-day a Uripiv Islander who eats with a woman runs the risk of a sudden and mysterious death. It simply is not done; it is not the custom.

In Barotseland, which is in Northern Rhodesia, Africa, the natives explain their custom of eating separately—men with men, women with women—in this fashion: A man is naturally stronger than a woman, and owing to this superior strength he might be tempted, in his hunger, to snatch the largest and choicest morsels of food. Therefore they dine separately so that the woman is assured her share. Naive and amusing, but not true. They eat separately because all their ancestors before them ate separately; because it has been for generations the custom to do so.

Savage people of long ago kept the young women of the tribe hidden. They were tabu to the warriors, and it was only when they reached a certain age that they were permitted to "come out into the sun" and be married. Survivals of this custom are seen in our chaperon and "coming out" party.

In many tribes it was considered a serious breach of conduct for a man to see his mother-in-law, talk to her, or have any association with her whatever. She belonged to a different tribal caste and was therefore tabu. Thus if a Wemba sees his mother-in-law approaching he at once retreats; if he is forced to meet her face to face he keeps his eyes fixed on the ground and walks on without greeting her. (Perhaps that mother-in-law joke is staler than we think!)

In Tasmania it is a natural custom for a man to look

aside while a woman is passing. This is an ancient form of politeness observed by many savage races. In that country it is also prohibited to speak of sexual matters in the presence of a third person.

There were many tabus in early life that later became forms of politeness. Thus, at one time the wives of the chiefs in Tonga were not permitted to be seen by any other men. Now they may walk abroad with attendants, but never without attendants. We see a suggestion of our chaperon in this custom. In Loango girls were at one time kept strictly secluded; they were tabu; they remained secluded until their parents found a suitable husband for them. To-day a vestige of this ancient custom is seen not only in Loango but among other savage peoples. The youths are not permitted to speak to the girls except when they are in the presence of their mothers. A strange sort of etiquette to exist in savage life!

The early Romans, advanced in courtesy as in all things, treated the women with so much honour and respect that it was prohibited to say the least immodest word in their presence. When a Roman met a woman in the street he always gave her right of way. Even the magistrates observed this custom.

In later civilizations, the association between the sexes brought about elaborate codes of courtesy and chivalry. This is particularly noticeable in France and in England, where the romance of the Crusades, the reign of Chivalry and the gallant tournaments at which "knights found courage in their ladies' eyes" added a distinctly courteous flavour to social life.

Respect for the Aged.—Although some savage tribes have been known to desert and even kill their aged members, many peoples are known who, since earliest times, have treated their aged with marked deference. The Eskimo, the Bushmen, the Australians, the Fuegians, the Veddahs, the Dyaks, the Caribs—all show courtesy and honour to the old among them.

Pygmy Group, Central Africa.

The care of the fire is very important. It must never be permitted to die out.

In Central Africa there are numerous savage tribes, and they are believed by many even to-day to be devoid of all natural affections. Yet there is a group among them members of which have been known to carry around for years an old, feeble, palsied man, showing him the greatest tenderness and attention.

We find many strange contradictions in savage life. Frequently we find barbarity coexisting with habits of refinement within the same tribe. The Ahts until recently deserted their sick and aged, and they are still known occasionally to sacrifice one of their number to the gods. Yet these very same people keep small mats of bark strips for strangers to wipe their feet with, and after meals they offer their guests water for washing their hands and mouths.

An interesting code of politeness exists among the Kikuyu. The girls stand aside for the warriors; the warriors in turn stand aside for the old women. Caste created this code, of course; the girls do not hunt or fish and are dependent upon the warriors for protection; therefore they belong to a lower social order and must show deference to the warriors. But the older women have brought warriors into the world and have served the tribe for many years; therefore they belong to a higher caste than the young girls and are treated with respect by everyone in the tribe.

A Masai warrior dare not greet an elder until the elder has greeted him.

Mabuiag boys are instructed not to stand upright in the presence of old men, but to crouch—a sign of respect.

In Asia, among the Mongols and the Kalmucks, a woman must not speak to her father-in-law or sit down in his presence.

Among the Mpongwe the young may never approach the old without crouching and baring their heads. So potent is custom that even when passing the huts of elders the young Mpongwe instinctively lowers his head.

A Corean and a Pueblo Indian never smoke before their fathers. It is considered a mark of disrespect to do so.

A Wemba may not ask his senior for a smoke; but, as Elsie Clews Parsons so naïvely points out in her "Fear and Conventionality," "he can sit down near the older men and look wistful."

Thus do we find respect for the aged one of the first traits of savage life. Wherever desertion of the aged has been known, lack of sufficient food and other external conditions of life forced the custom upon the people. But on the whole, we find a surprising degree of respect and courtesy towards older people among the savage races.

The ancient Egyptians, according to Plato, inculcated respect for old age. They required, as we do to-day, that the young rise upon the approach of the old. We are informed that, like the Israelites and the Lacedæmonians, they were required at all times to give place to their superiors in years.

Coming to early European history we find that this respect for the aged, far from disappearing, has increased and has become definitely a part of social life. The young were required to pay marked deference to all older people, beginning with their parents. Even a prince was not permitted to sit at table with his father until he had distinguished himself by valour.

The Castes of Early Society.—Many factors served to divide early society into castes, or classes. There was, of course, royalty which always surrounded itself with elaborate ceremonial. And as important, if not as impressive, as royalty was the temple system or the religious system—the priests, scribes, magicians, wizards, seers. Primitive civilizations grew up around these people and many of them accumulated vast properties and treasures.

Wealth, of course, has always been one of the greatest dividing factors—caste-creating factors—among men. In early days property consisted of rights in land, except, perhaps, for a few movables. Kings granted great tracts of

land to their favourites, largely as a matter of pampering their own vanity. And these favourites, once warriors or attachés of the court, became powerful landowners.

Now we come to the artisan class—the makers of pottery, the weavers, the carpenters, the craftsmen. There is no doubt that at some time or other crafts or professions were in most countries hereditary. Thus in the Fijis the carpenters form a separate caste and it is customary for the son to step into his father's place and continue in the craft of carpentry. In India, as in other countries, craft guilds were formed which further divided the people into classes or castes.

At the base of social life we find the largest and most essential class in the community—the peasants, the serfs, the tillers of the soil. These are the people who cultivated the land, who gathered together for safety and formed villages, who took care of the flocks. And these are the people who were then, and who have been through the ages, the most superstitious, the least informed. Therefore they are the people who have accepted the customs of their forefathers without question, and who aped the customs of those above them.

There have been many, many other castes of society, but it would be tiresome to mention them all. There have been the soldiery and the seamen, the merchants and the retailers, the servants and the slaves. Early life was divided into countless castes; there existed high and low even within castes. A study of these early castes or divisions of society enables one better to grasp and understand the social problems of to-day.

Caste and Titles.—"Judging from what has happened since history has been organized," says Frederic Marshall, "it seems reasonable to suppose that in early times kings invented themselves first and then invented titles in order to illumine their glory. Menes was a title in himself for his name signifies 'the conductor.'"

History tells of many battles that have been fought for

titles. A whole book could be written on the subject on titles alone. The man of title considers himself on a plane removed from other, lesser peoples; he feels himself surrounded with glory and pomp. There is no satisfaction quite as great as titular satisfaction.

Mr. Marshall tells an interesting little story in his book "International Vanities." We quote it here because it bears out our assertion that titles pamper the vanity of man, that man will go to any extremes to gain the title he covets.

Napoleon met one day an old soldier with one arm. He stopped and said to him, "Where did you lose your arm?" "Sire, at Austerlitz!" was the reply. "And were you not decorated?" asked the Emperor. "No, Sire, I was forgotten." "Then," rejoined Napoleon, here is my own cross for you; I make you a Chevalier." "Ah, Sire," exclaimed the soldier, "Your Majesty makes me Chevalier because I have lost one of my arms; what would your Majesty have done if I had lost them both?" "I should have created you an officer of the Legion," answered Napoleon. Thereupon the soldier instantly drew his sword with his remaining hand and cut off his remaining arm!

There have been all sorts of titles since titles were first created. There have been court titles which include king, emperor, tsar, and the lesser court titles such as duke, earl, count, etc. It is said that the word "duke" was invented in 1130 by Louis, third Count of Thuringia. He adopted the title in order to distinguish himself from the crowd of counts around him. Sultan, it is interesting to note, means "mighty man."

Next to the court titles are the religious titles. These include the Pope, bishops, vicars, etc.

Titles of courtesy come next, and they form one of the largest branches of this subject. It is possible that titles of courtesy grew out of titles of court—just as the word courtesy itself grew out of the word court in the time of Philip the Good, Duke of Burgundy. These titles of courtesy include sire, monseigneur, lord, lady, etc. Each has a history of its own.

The origin of Lord and Lady is so interesting that we

cannot resist the temptation to give it here. The Lord was simply the loaf-ward, the guardian of the loaf or the food, the band that kept the house together, that is to say, the houseband—later, the husband.

The lady was simply the *loaf-kneader*, the maker of the loaf, the one who attended to the domestic duties. The spinster is one who does not become a loaf-kneader (or lady) but sits at the distaff and spins or winds the thread.

Gabriel Tarde believes that titles had something to do with the development of politeness, that the deference of one titular caste toward another helped make men polite, brought customs of courtesy into being. We like particularly this paragraph, which we quote from his "Laws of Imitation":

Politeness is merely reciprocity of flattery. We know beyond a doubt that the desire of the petty potentate for ambassadors, of the marquis for pages, of the courtier for a court, that the general need of being flattered, waited on and saluted like a nobleman, was the secret factor which little by little, in France and elsewhere, made every man polite. It began with the court, then reached the city, then the chateaux, and then all classes to the very lowest.

THE DEVELOPMENT OF ETIQUETTE

Most authorities are agreed that the Orient was the seat of early culture and that manners are oriental in their origin. This may be true, but it did not take long for manners to spread everywhere. Although we find early sproutings of culture and of cultivated manners in China, Persia, Japan, and the Caliphate of Bagdad, it was not until later, in Spain, France, and other European countries, that etiquette took any serious form.

The origin of the Golden Rule as we interpret it, and which is, after all, the true basis of all etiquette, is accredited to Confucius, the sage of China (550—478 B.C.). Several times he expressed that rule in his writings: "What you do not like when done to yourself, do not do to others."

You will be interested in the story of Confucius' birth.

He was the son of the old officer Heih. That officer, when over seventy years of age, sought an alliance with one of the three daughters of a certain man of the Yen clan. Heih had nine daughters and one son who was crippled, and he did not want to die until he could leave a strong male offspring to carry on his glory. This desire for male offspring was very strong in early man.

Ching-ysai, the youngest of the three daughters of the Yen clan, in the manner of all Chinese children said it was for their father to decide the case. As Heih was of most illustrious descent, the father said, "You shall marry him, then." Accordingly she became the bride of the old man, and in the next year the mother of the sage, Confucius.

Heih died not very long after, and Confucius grew into manhood aware always of the gentle, inspiring presence of his young mother who taught him kindness, piety, courtesy, love. Her influence remained with him throughout life.

As the sage of China, Confucius taught his followers the virtues of kindness and gentleness, even as his mother had taught him these virtues in youth. He taught his people to respect the aged and help the infirm; he instilled in them a love of peace; he gave them their Golden Rule. He is reported to have said, "All virtues have their source in etiquette."

Confucius travelled a great deal, and with him went his disciples. It is easy to see how they spread the gospel of courtesy and politeness, how they carried etiquette wherever they went. To Confucius, then, we owe the first distinct code of etiquette, of manners; and to him we are indebted for many of the customs that later will be discussed.

Caste in Japan has always been, and still is to-day, very great. Every particular caste has its own peculiar "I"—a pronoun which no other caste may use.

The Japan of the seventh century was divided into two great classes—the governing class and the supporting class; but each of these two classes was divided into many grades or castes. The higher ranks and offices were accompanied

with definite grants of rice land to be held during tenure of office. People of other ranks were exempted from payment of tributes.

Because of the many castes existing within the governing class, all rules and details relating to address, title, ceremonial visits, etc., involved problems of precedence and importance in rank. This brought about a minute, tedious, and extremely verbose politeness which is found in both Japan and China at the present time. The Chinese particularly have an "academy of compliments" by which they regulate the number of bows and words to be used on any occasion. Thus ambassadors before appearing at court sometimes practise these ceremonies forty days in advance!

Meaning of the Word Etiquette.—There are many conflicting opinions as to the correct origin of the word etiquette. What does it mean? Where does it come from? What is its relation to modern life?

Some authorities believe that the word etiquette derives from the Greek *stichos* which means order, rank. Others claim for it a French origin.

It is possible that the word is a corruption of the Latin phrase *est hic questio inter N. et N.* This was a formula placed by procurers on their law papers, similar in meaning to our legal formula *N. versus N.* The primary French meaning of the word etiquette in the sense of ticket originated probably with this formula.

Etiquettes, or tickets, became popular in France and were fastened upon the outside of parcels and documents to indicate their contents. And later we find *etiquettes* distributed among the people who are to be presented at court. The purpose is obvious. These *etiquettes*, being printed rules on what to do and what not to do, were intended to keep people from making blunders before the royal personages.

Garrick Mallery, writing in the *American Anthropologist*, says:

As *etiquettes* were fastened outside of documents or parcels to

indicate their contents, so *etiquettes* were given to people on ceremonial occasions to tell them where to stand and what to do. Thence grew up the secondary use of the term as descriptive of the ceremonies themselves. Therefore the slang phrase of approbation "that's the ticket" is etymologically correct.

The Extreme Etiquette of Spain.—It was in Spain that etiquette attained those extremes which are to-day so difficult to understand. Men and women ceased to be human beings with a will: Frederic Marshall says, "They became machines of reverence, everybody had his place marked out and was kept mercilessly in it. The number of steps and the depths of bows which each person was to make on entering the royal presence, the width of cloaks, the length of ribbons, and perhaps more than all, the elaborate division of offices and functions, were fixed with a precision of which examples exist nowhere else."

The people of Spain took up ceremony and reverential courtesy as a duty. Even the beggars asked each morning of their colleague: "Señor, has your Courtesy taken his chocolate?" As for the grantees, they considered themselves above the universe and all the men within it!

The court etiquette of Spain was elaborate and complex to the extreme. It is related that on one occasion the Queen fell from her horse, caught her foot and hung by the stirrup, unable to extricate herself. This happened in the presence of a number of attendants who made no move whatever to assist her. They couldn't, you see, because the grand equerry whose particular and peculiar privilege it was to unhook the royal ankle on such occasion was absent!

A passerby, noticing the Queen's plight, released her. Whereupon he received several doubloons for his service, but was condemned to banishment because of his indiscretion! Such were the extremes etiquette had reached in the Spanish court.

Mr. Marshall relates still another instance which is interesting enough to quote. Philip III, finding the fire too hot for his royal well-being, told the Marquis de Pobar to

During the age of chivalry knights raised the visor to indicate friendliness. An interesting phase in the development of our custom of raising the hat.

put it out. But unfortunately the Marquis could not presume to do so. Fire extinction was the peculiar privilege of the Duke d'Useda who was at that moment hunting in Catalonia. The King would not give way to the fire, since the fire was bound by etiquette to give way to the King. He sat majestically still before it, got erysipelas, and died.

It would appear that precedence was a matter of life and death in the Spain of this mad period. To enter a room before a person higher than you in rank, would have been a sin inexcusable.

Ambassadors sought to increase the importance of Spain by fighting for precedence in foreign countries. Thus in 1661, it is related, the Spanish envoy attacked the carriage of the French ambassador in the streets of London, hamstrung his horses and killed his men. He went on joyfully to the palace, proud at having done his duty and prevented his rival from getting to court before him.

Bielfeld tells a similar story of two envoys, one from Genoa and one from Brandenburg, who, being unable to come to terms as to which should be the first to be presented to the French king, made this stipulation: He who reached Versailles soonest on the day of the reception would take precedence over the other.

The shrewd Prussian went to Versailles the night before and sat on a bench in the palace until dawn. Arriving early, the Genoese saw the Prussian, recognized the trick, and slipped quietly through the door of the King's bedroom which, for the moment, had been left ajar. He began delivering the necessary salutations, but the indignant German rushed in after him, pulled him back, and began delivering his own little speech!

Still another tale is told of two ambassadors who met face to face on the bridge at Prague and who stopped there for the entire day because neither would permit the other to pass. They felt it would have been a disgrace to their respective countries to allow the other to go by first.

This extreme type of etiquette, this incessant struggle

for precedence, not only in diplomatic circles and at court, but among the people of the cities, was conspicuous for about three centuries. We find it as extreme in France as in Spain, but we find French etiquette gradually taking on a newer note, a finer, saner, more advanced significance.

The French Etiquette.—France has always been the land of chivalry, of elegance, of politeness, of manners. There have been times, of course, when France, like other countries, suffered reversals to barbarism through war and through court tyrannies; but on the whole, France has held the banner of culture and courtesy high.

The great mediæval social system known in history as chivalry was founded in France during the eleventh century. This system of chivalry revolutionized the manners, morals, tastes, amusements, ethics of France, and, later, of England, Italy, and other European countries.

The system of knight errantry, or chivalry, began about the middle of the eleventh century and was originated by some nobles who had become ashamed of their lives of brigandage. At the age of seven every boy of noble birth was apprenticed to some great lord as page and trained to knighthood. He was taught honour, chivalry, truth, refinement. The highest ideals were inculcated in him. Frank Alvah Parsons says:

This system may properly be said to have sounded the death knell of heathen barbarism and to have marked the beginning of Christian civilization as we know it to-day.

During the next three centuries many external conditions changed the manners and customs of France, making them heavy, formal, dull. There were the Crusades, in themselves most romantic and with a delightful history, but bringing into France new and strange tastes and customs. And there were the wars which threw the country into chaos. The decline of the spirit of mediævalism and chivalry at the end of the fourteenth century was followed by the gradual decay of the ideals and the courtesies that began in the time of Henry I.

In the sixteenth, seventeenth and eighteenth centuries in France there were books which gave the rules of conduct. These books of etiquette were known as the *Civilités*. Two such *Civilités* are now in the hands of an English art collector. One is dated 1695 and the other 1782. They are both occupied to a great extent with the civilities of the table, and one may see in them precisely how Paris dined in the 17th and 18th centuries.

At the close of the 17th century it still seemed necessary to remind the host that he must not chastise his servants at table, and the guest that if he swallows his wine too rapidly he may choke himself, "which is impolite and inconvenient." According to these *Civilités* you sit down to table with your hat on, removing it only if your health is toasted "by a person of quality." And how, we wonder, did they judge these "persons of quality"?

Every *Civilitéé* of the 17th and 18th centuries enjoins you to go to dinner with your hands clean. Apparently there is only one towel, for the *Civilitéé* requests that "a dry corner be left for the person who is to use it afterward."

Furthermore the *Civilitéé* exhorts the man of polish not to scratch himself in company, not to snuff the candle with his fingers, not to blow in his soup, not to return the meat to the dish after smelling it, not to talk with his mouth full, not to pocket the fruit at dessert. These rules of conduct give us an excellent insight into what social life must have been like in the 17th century. The *Civilités* warned the people only against those things they actually did, those habits and customs which actually existed.

But let us leave the fascinating and naïve *Civilités* for a while and see what has been happening at the French court. Court etiquette reached its height in France under Louis XIV. He was a great king and he had a magnificent court. His reign was the most striking politically, socially, and morally that France has ever known. He came into his sovereignty in 1643 and reigned for seventy-two years.

As in Spain, a great deal of ceremonial surrounded court

life. Louis XIV himself wrote a book concerning court ceremonial, and all courtiers were enjoined to obey the rules. Precedence was a matter of great importance. It found its way even into the streets, where it became a subject of frequent dispute. The narrowness of the Parisian streets made it impossible for large coaches to pass each other; when two met, therefore, that of the lesser dignitary was obliged to go back to the last crossroad. One can see how this occasioned arguments. Long pedigrees were recited, claims set forth, and strangers called in to settle the matter of precedence.

At Versailles the importance of etiquette reached such a point that it was carried to almost incredible extremes. The catch phrase of the time was "*Toute la femme est dans la reverence*," which meant that the manner in which a woman curtsied—in other words, the manner in which she followed the etiquette of the times—revealed her true qualities.

It is related of Louis XIII that, being on one occasion obliged to visit Richelieu, who was ill at Tarascon, he lay down on the bed beside him. He was, after all, the sovereign; Richelieu a subject. Therefore it was impossible that Richelieu lie in bed, though ill, while Louis stood or sat beside him. Therefore, he took his place on the bed beside the sick man, and so preserved the royal dignity! Louis XIV visited Maréchal de Villars in the same manner when the Maréchal was lying wounded at Malplaquet.

France of the Revolutionary period is a France in which we do not like long to dwell. We glimpse man's primitive personality coming, for a moment, to the surface of life after long years of civilization. We see the pent-up furies of the people finding savage expression in the mass, the mob. Castes were destroyed; petty precedences and ceremonials were wiped away. And the titles that but a moment before had been proudly flaunted, became handles of death.

Yet out of this madness, out of this savage chaos,

emerged France—the Republic. And now we come to the new régime with its newer code of etiquette.

The famous "Book of Ceremonial" originated by Napoleon still exists. It is a bulky collection of 819 articles concerning etiquette, and it was intended to anticipate every possible situation and supply directions for meeting every emergency. It is as elaborate as that of Louis XIV, on which it was based; it is even more elaborate than that of the Second Empire, for which it served as a model.

Concerning the compilation of the Book of Ceremonial, in which several people besides Napoleon had a share, Madame de Staël says:

Whoever could suggest an additional piece of etiquette from the olden time, propose an additional reverence, a new mode of knocking at the door of an antechamber, a more ceremonious way of presenting a petition, or folding a letter, was received as if he had been a benefactor of the human race.

Napoleon applied to many of the surviving members of the Bourbon court for information. It was partly with their aid that the "Book of Ceremonial" was compiled. But Napoleon, in the main, framed his own etiquette and always assigned to himself the first and most important place.

In matters of precedence Napoleon was stubborn. It is related that in 1808 the "Almanach de Gotha" for that year had just been printed with the regular alphabetical arrangement of the reigning houses, beginning with the Anhalt duchies. The Emperor indignantly suppressed the edition and required the whole to be reprinted with his name on the first page.

At St. Helena Napoleon gave his reasons for having compiled the bulky code of etiquette and ceremonial. He said:

I was rising above the level of the crowd, and it was indispensable to create myself an exterior, to compose a dignity and a gravity, in one word, to establish a ceremonial; otherwise I should have been

daily tapped upon the shoulder. In France we are naturally inclined to ill-timed familiarity; we are instinctively courtiers and obsequious at the outset; but if not repressed, this familiarity soon ripens into insolence. (Las Cases, "Memorial de Sainte Helene," vs. IV, p. 271.)

Here we have the reason for all ceremonial, for all form, for all rules of conduct. It is the "rising above the level of the crowd" and the desire to be apart from that crowd and protected from its crudities that results in the creation of codes.

France of the late 19th century is polished, cultured, leader of the world in fashion and in social matters. From this 19th-century France, as from the France of Louis XIV, we borrow many delightful customs which shall presently be discussed.

In England and America.—England with its knights and ladies, with its vassals and lords, its peasants and royalty, was from the very first a country of forms, observances, and ceremonials. As a maritime nation it was very naturally one of the greatest promoters of maritime ceremonial, such as the firing of guns, the dropping of sword points, the presenting of arms, the lowering of sails, etc.

In early times, salutes given in the open sea consisted in a certain number of cannon shots between ships of equal rank. In cases of inequality, the inferior side was expected to add some sign of respect and homage—strike or hoist its flag, furl its upper sails, change its tack. But in the time of James I, England, in her pretension to possess the high seas, insisted that her maritime supremacy be recognized by the instant disappearance of the flags and sails of all other ships. The English vessels were to offer no greeting in return. This attitude led to many wars. To-day salutes are obligatory to no one, having become pure acts of courtesy.

In manners, customs, and fashions France has always been the "feminine" country—England the "masculine." Early England was crude, though courtly, borrowing some of its customs from Spain, France, and Italy, but

being largely sufficient unto itself and deigning to ignore the customs of the countries around it.

Courtliness and chivalry began in England at about the same time that the great system of chivalry made itself felt in France. In the time of Richard Cœur-de-Lion (1189—1199), England's most generous, impulsive and lovable king, there were gay tournaments, rich banquets, elaborate court functions. Romance lurked in Sherwood Forest. And "knighthood was in flower." The courtly manners and customs of the time reflected the spirit of the people at court and in the cities.

Mediæval England was an England of castes and caste restrictions. The Barons and the Lords wore silks and velvets: the peasants who dared to ape them were punished. We read, for instance, of a needlewoman of the 13th century who was compelled to sweep the streets for a week because she had the audacity to make herself a cap like the one worn by her lady!

As mediævalism decayed, the Renaissance was born, nurtured, and developed in Italy. Its influence upon the manners, customs, morals, and arts of the whole world cannot even be estimated. In England, the Renaissance appears to have inspired a period of luxury, grandeur, and magnificence which vied with that at the French court of the same period.

During the reign of King Henry VIII etiquette received an impetus but was still extremely crude. Table manners were nearer those of the savage than the civilized level. Yet remnants of barbarism were gradually disappearing from the customs and the manners of the English people.

At the beginning of the 17th century there appears to have been a great aping of the customs and fashions of France. With the ascension of Charles I to the throne, court manners became stately and dignified and throughout the kingdom there was a careful regard for the niceties of dress, for little politenesses, for courtesy and consideration toward others.

Toward the close of this century Lord Chesterfield makes his appearance. He gives us a clearer insight into the manners and customs of his period than any other writer. He teaches us not only of the customs of England, but of France, Germany, Italy, and other European countries.

A few excerpts from Lord Chesterfield's famous letters to his son will reveal to you a great deal concerning the manners and customs of the late 17th and the early 18th centuries. This son to whom Lord Chesterfield wrote was illegitimate. It was the Lord's mission in life so to educate and cultivate this young man that his inferior birth would not be held against him. Despite his letters, so devoted, so persistent, and so enlightening, the boy turned out to be a great disappointment.

Lord Chesterfield in one of his letters to his son asks:

By the way, do you mind your person and your dress sufficiently? Are you be-laced, be-powdered, and be-feathered as young fellows are, and should be?

As his son visited many different courts and was educated in several countries, Lord Chesterfield had occasion to write him several times concerning the customs of these countries. He wrote at one time:

A man of the world must, like the chameleon, be able to take every different hue.

And at another:

Take care to inform yourself if there be any particular customs or forms to be observed, that you may not commit any mistake. At Vienna men always make courtesies, instead of bows, to the Emperor; in France nobody bows at all to the King, nor kisses his hand; but in Spain and England bows are made and hands are kissed. Thus every court has some peculiarity or other, of which those who go to them ought previously to inform themselves, to avoid blunders and awkwardness.

During the 18th century we find practically all of Europe suffering from "Anglomania." All countries and peoples attempted to copy the English mode of life, the

English fashions and manners. Even France fell under this influence.

Beau Brummell, immortal dandy of England, appears at the beginning of the 19th century. His real name was George Bryan Brummell, and as a "dandy" he became the ruling spirit of the English noblemen. He had a remarkable personality—was at once witty, charming, sarcastic, flattering. He frequented the best clubs and the most exclusive houses; his manner gained for him a wide acquaintance and unparalleled popularity.

The secret of Beau Brummell's influence is to be found in his magnetic personality. His insolence appears to have been amazing. On one occasion, we are told, he ordered a duchess to leave the ball-room backward because her back offended his taste! On another occasion he deliberately "cut" a young colonel whose name was on everyone's lips because "Who ever heard of his father?"—he said. Yet, no one ever heard of *his* father.

Beau Brummell and his associates became, nevertheless, the finest connoisseurs of good living. Beau Brummell showed exquisite taste in all that concerned dress. He changed fashions to suit himself. He wore his hair short and without powder, and instantly his admirers aped him. He shunned the bright colours of the period and wore dark, perfect-fitting clothes. Although there were many other "dandies" during this period, no one could manage to appear as distinguished looking as Beau Brummell and he became known as the best-dressed man in London. We will discuss more definitely in later chapters the influence of Beau Brummell and his associates upon the manners and fashions of the world.

Etiquette received a great impetus during the Victorian Era. The Queen set the pace for elaborate functions and rich attire and, as always, the people attempted to imitate the court. The Victorian Era made itself felt even across the sea in young America.

What has been happening in America while the world

has thus been developing in matters of culture and fashion? During the early colonization etiquette was negligible, of course. The early struggle for existence was a great leveler of castes and classes, and everyone worked together for the general good. There was a wholesome simplicity, an inspiring generosity, a kindliness and thoughtfulness toward one another.

Before the colonies declared their independence there was an influx of French and other foreign ideas. From France, Italy, Holland, England emanated much that we ourselves are. After the Revolution, peculiarly enough, the social ideas and ideals of the United States were distinctly English. The Colonial style was the English style; the young nation could break away from the power of the older nation, but not from the influence of its manners and customs.

Washington set the pace for diplomatic simplicity in the United States, although there was a certain courtliness. A contemporary of France, visiting the young nation, reports of Washington: "He was as gracious as a king."

During the first hundred years of its existence, the United States was a forcing house for the customs, whims, fancies, fashions of all the world. We imported our customs with our clothes and food-stuffs, although we prided ourselves upon being absolutely free from the Old-World influence.

The Southern colonies, before the Civil War, however, had a certain style and chivalry all their own. There was a careful regard for dress and for table service. The simplest dinner was served faultlessly. Gallants were ready to draw their swords at a moment's notice to protect (or amuse) the ladies of their fancy. But all of this chivalry and extreme etiquette appears to have gone out when slavery went out.

The Northern colonists, the New Englanders, were of sterner stuff—truer English than their Southern cousins. Braving the rigours of the northern climate, the Puritans

determined to live up to their ideals of independence, simplicity, and freedom. The primitive personality is not thrown over so easily. Here, among peoples who had fled oppression and who had founded a new world to serve God each in his own way, the appalling Salem witch craze broke out. Hundreds of innocent men and women were burned or hanged to satisfy the superstitious hysteria of the masses. History simply repeated itself, as usual. In 1515, by the shore of Lake Geneva, more than five hundred people were burnt to death as witches. All through Europe thousands of men and women were burnt as witches, even before the colonies were founded.

The Indians taught our forefathers much in the art of hospitality. It is believed by many that the Indian races are, and always have been, the most hospitable races of the world. It is natural that the early colonists, constantly in contact with the Indians, should have borrowed from them some of their ideas of hospitality. Much that is Indian is woven into our social fabric, as we shall later discover.

The United States which is only three hundred years old as a country of written record, and less than two hundred years old as a nation, has borrowed most of its manners and customs from other, older civilizations. Though there have been in this country many writers on etiquette, the truth is that we have accepted our etiquette ready-made. There are, of course, some customs and fashions that are distinctly American; but the most of the things we do and say show the influence of the Old World.

After all, what customs could we have created here in young America? What code of etiquette could we have developed in the short time that we have been a separate people and a separate nation?

Etiquette is a growth. It began in the earliest times and has been progressing, developing, growing ever since. The history of its development differs in the various countries; sometimes we find a highly developed etiquette as

in the time of Marcus Aurelius who, in the Golden Age of Rome, taught politeness and consideration for others, taught courtesy and ease and gentleness. And then we see etiquette sink far below the levels of civilization, as in the time of Nero, who originated so many new ways of torture, who made death a plaything and his savage arena a playground.

Thus etiquette, while it remains always essentially and fundamentally the same, is to a certain extent a reflection of the periods through which it has passed. The age of man and the long ages of antiquity—they blend into one shadowy, beautiful whole, the fabric of human existence.

CHAPTER IV

THE STORY OF SPEECH

To classify things is to name them, and the name of a thing, or a group of things, is its soul; to know their names is to have power over their soul. Language, that stupendous product of the collective mind, is a duplicate, a shadow-soul, of the whole structure of reality; it is the most effective and comprehensive tool of human power, for nothing, whether human or superhuman, is beyond its reach.

—F. M. CORNFORD.

MAN'S FIRST LANGUAGE

WHEN we read that "primitive man had at first no means of expression, no way of making known his thoughts and ideas to others," we are tempted to forget, for a moment, the known facts regarding early man, and permit our fancy to wander at will.

Who knows what brutish cave fellows first sat in the sun and talked to a bird near by? Who knows what early cave mother first bent over her child and said strange, crooning things to it? Who knows what savage first shouted his defiance to the stars, daring them to come down and taste his strength?

We can be no more definite concerning the origin of speech than we can concerning the origin of man himself. We are told, and it is reasonable to suppose, that articulate speech originated when men began to clan together and discovered the need for a definite means of expression.

But how can we be certain that savage man did not have an instinctive language regarding which nothing is known? How can we be certain that he did not have a sound, or a series of sounds, which he associated in his own mind with "bear" or "tree" or "sky" or "water"?

The historian and the philosopher have never ceased to speculate upon speech and its origin. Where did it come

from? How did it originate? Is it a gift peculiar to man—a “gift of God” as some writers like to express it? Or did primitive man simply imitate the sounds of the animals

Man learned the use of his voice by imitating the cry of the beast, the song of the bird. Imitative sound was the first language of mankind.

around him and of these sounds create the first articulate speech? In other words, is speech a natural human faculty, or is it an art developed by man during his long sojourn on earth?

The problem is still pondered. But most authorities are of the opinion that speech is both divine and human in origin, being a natural gift or faculty developed by man through his own perseverance and ingenuity. And all authorities agree with Charles Hodgkin that "it is the power of speech which makes man the highest of all animal beings and which forms the barrier between him and the dumb animals."

Man's first language, however, was not articulate speech. Early man had a means of expressing his thoughts long before he discovered that he could imitate the sounds of the jungle. Before man could speak he could mimic; before he could mimic he could pantomime; before he could pantomime he could gesture.

If you have ever seen any of the Denishawn pantomimes, you know how a beautiful and impressive tale can be told without one spoken word, but solely through dancing, pantomime, and gesture. Not a sound is uttered throughout the performance. Yet when the audience leaves it carries with it a vivid impression of things, places, persons, and happenings.

So it must have been in primitive times before man spoke. If he wished to indicate to the woman sitting before the cave that a huge beast was rushing down upon them, he probably pointed in an excited manner to the direction from which the beast was coming. That gesture warned the woman. It informed her, as definitely as speech, that there was something fearsome and dangerous not very far away.

Or perhaps the man had discovered a spring of clear, sparkling water after a siege of thirst, and he wished to inform someone else of the find. He would probably imitate the action of taking water in his palms and conveying it to his mouth, or the manner in which the water cascaded over the rocks. That would be pantomime—a simple pantomime that any one would understand.

Of course, all this was before man began to reason.

There could not have been very much thinking or reasoning before speech had been developed to some extent. Reason did not produce speech; it was speech that produced reason. In primitive life, words enabled man to record and definitely fix certain facts in his mind; this enabled him to grasp newer and more complex ideas.

THE DISCOVERY OF VOICE

Although it is barely possible that man "spoke" from the first—that is, used his voice to give vent to his feelings, emotions, anger, desires—we know that he did not use his voice in the sense of speech until a certain very definite point in his development.

"Primordial man," says Wells, "before he could talk, probably saw very vividly, mimicked very cleverly, gestured, laughed, danced, and lived, without much speculation about whence he came or why he lived." But when man began to clan with his fellows, and gradually as clan life grew into tribe life, the need for a more satisfactory means of expression made itself felt. Man wanted to interpret his sensations; he wanted to express his purely physical impressions. And doubtless he found his gestures and his pantomime wholly inadequate.

How could he express the fears, the joys, the wonders of his daily life? How could he make that other fellow know of his great strength? How could he tell him of the bear he had killed in the jungle, of the woman he had dragged to his cave?

Groping about for a more definite and tangible way of making his ideas understood, primitive man discovered a power which, until then, he had not used—a natural faculty of which he had not been aware. He discovered—voice.

The ability to produce vocal sounds by means of expired air is not limited to man alone. It is to be noted that all vertebrate animals that perform respiration by means of lungs have this ability also. But the utilizing of

this ability for speech, and the development of speech into language, is a triumph which man can claim exclusively.

Man's First Use of Voice.—In civilized life great fear often brings forth an inarticulate cry. You know how violent pain or anguish makes people groan. Anger and impatience cause grumbling.

These strange, unintelligible sounds constituted man's first vocabulary. To express his sensations he made instinctive sounds, like our cry of fear or pain. His earliest use of the power of voice was to utter simple, natural sounds like those we hear in very young children.

It was only through great skill and perseverance that man finally developed language. At this point it is important that the reader know precisely what is meant by "language" as distinguished from voice and speech. Voice, as used here, is meant simply to indicate the power, or ability, of utterance. Speech means the uttered sounds which obtain from voice. Language is used in the sense of words and phrases expressing definite ideas.

"The first rays of language," says Max Müller, "changed the world from night to day, from darkness to light." For the first time man was able to convey definite ideas through definite expression. One must see at a glance what a tremendous impetus this was to thought, to reason. And one must see how man was now completely and forever separated from the lower animals.

But language did not flash upon mankind suddenly. It developed slowly, and through long periods of life—more slowly, as a matter of fact, than most human developments, for reasons which will be pointed out in a moment. Before mankind had a human vocabulary it had what is known as a "monkey" vocabulary. This consisted of sounds and combinations of sounds in imitation of the cries of animals and the sounds of inanimate things of nature.

The Beginning of Words.—Hearing frequently the hoot of the owl, the shriek of the ape, the roar of the thunder, man came at last to recognize these sounds and understand

them. With the first triumph of voice discovery he imitated these familiar sounds. Probably they were part of his pantomime, at first. In warning of the beast or telling of the water he may have tried to imitate the sounds he heard. But later, it appears, man actually had a language based upon these imitative sounds. It is frequently referred to as the "monkey" language.

We can easily imagine a frightened cave man rushing to warn his fellows, or his woman, of the approach of some huge beast. The more thoroughly to express the danger he spreads out his arms in wild gesture to indicate the size of the animal, and imitates its cry to tell them precisely what animal it is.

The imitative sound he uses is understood. It is a sound peculiar to the beast that is approaching. There is no mistaking it. The others join him and rush away as though they had actually seen the beast. They did see it in imagination; the sound or sounds made by their fellow created a picture of it in their minds. In other words, the sound conveyed an idea, and by so doing placed itself in the category of language.

Now let us take one sound—the sound used by the savage cave man to imitate a dangerous animal and warn others of its approach. After a certain amount of repetition that sound becomes a word. Let us pretend, for instance, that it had been a bear approaching. The savage may have used a guttural and slow *aahr* to imitate the growl of the beast. After a certain period of development he is able to use the word *aahr* when he leaves the cave in the morning to convey the idea that he is going to hunt for the bear with others of the tribe. The gesture and pantomime accompanying the sound, as well as the inflection of the voice, help carry the message.

Thus did man begin to speak and form words. We will never know, of course, the first words our ancestors pronounced. We cannot guess the words that were born, lived

their brief span of usefulness, and disappeared into eternity.

What we do know, however, is that man emerged from the darkness of prehistory with his gift of voice; that he utilized that voice as a means of expression, to convey his thoughts and his ideas; that in his ingenuity and skill he created a language that has carried its origins to all corners of the earth.

Explanation of the Famous "Bow-wow" Theory.—The first primitive language must have been monosyllabic. But little by little man became skilled and clever in the use of voice and in the art of imitation. He became more agile in the use of sound. And gradually words and even combinations of words multiplied under his tongue.

According to what is known as the "bow-wow" theory, words like cuckoo, crow, peewit, etc., are derived from the sounds made by those birds. At first the words were simply disjointed sounds, like the call of the cuckoo or the crow; but in time these sounds or syllables were elaborated into the words which still exist and are a part of our language.

Similarly words like yelp, roar, neigh, bark, growl, whinny, mew, etc., are derived from the actual sounds produced by the animals suggested. Say the words over slowly. Don't you almost seem to see the animals? Can't you understand how primitive man used sound to convey ideas?

If this theory is correct, we can trace many of the words we use to-day to man's first language—the imitative sound language. Words like bang, crack, purr, hum, whizz, etc., may have had their origin in man's first attempts to imitate these sounds. An arrow shot through the air would whizz; a bit of twig broken underfoot would crack. The collision of hard bodies, jungle sounds, and other familiar daily noises would produce such words as splash, whack, snap, ring, thump, hiss, whistle, pat, murmur.

There is, however, another theory advanced by some

authorities which seems quite as plausible as this "bow-wow" theory. It is that man first gave expression to his ideas and sensations in the form of short syllables, interjections—natural but unintelligible sounds such as an infant might make. They would be interjections like *ah*, *oh*, *pooh*, *um*, etc. Through constant repetition these sounds or syllables would have finally taken upon themselves a certain meaning or significance.

Thus some authorities claim that words like *ugly*, *huge* and *hug* are derived from the deep guttural sound of distaste—*ugh*. From *ah*, which is the natural and instinctive cry of pain and sorrow, we get such words as *woe*, *wail*, *ache*. The natural sound *um*, which one uses instinctively in times of pleasure or satisfaction, would give such words as *hum*, *jump*, etc.

It would seem, therefore, that the root words of languages had their origin in the simple, natural sounds of pain, pleasure, tiredness; and in the imitative sounds used by early man to mimic the animals and reproduce the sounds of the inarticulate things of nature, such as the water falling on rocks, the rain pattering on the ground, the thunder rumbling in the heavens.

The gradual transition from guttural sound to articulate language is summed up so perfectly by Xanthes in "Speech" that we quote it verbatim here:

In the beginning of the world primitive man was contented to imitate the language of the animals. This observation furnished him with a considerable number of imitative words which, in time, were changed into syllables. The needs of existence, then very limited and always the same for everyone, insured the repetition of these syllables which very soon became for men of the same race the distinctive mark of their special affinities.

Later the necessities of existence were increased and the field of imagination was enlarged; man was no longer contented to imitate the sounds which the animals produced. The sound of waters, that of the wind, the murmur of the brooklets, the rumbling of the thunder, in a word, all the impressions which came to them from without, were unconsciously received and imitated by them.

In time these inarticulate cries, these disjointed syllables, were

either united or separated in various ways, so as to form a variety of syllables better adapted to the mentality just coming into existence, and rendered this union or separation absolutely necessary.

Words were thus created.

Philologists claim that our great wealth of words can actually be traced back to no more than five hundred root forms which are based upon the sounds used as words by primitive man.

Why Language Developed Slowly.—In early life there was not, at first, very much need for speech. For narrative purposes our ancestors danced and gestured and pantomimed. In other words, they acted rather than told. To express their emotions they needed, at first, no words. If they were afraid, they cowered in some corner; if they were happy, they danced and jumped; if they were angry they glared and grasped more fiercely their spears or clubs.

The coming of speech, therefore, was retarded; and the growth and development of speech into language was slow indeed. At first different families or clans probably each had their own words which they used and understood. But the women would be carried away by other tribes and the men would be killed in warfare or in the jungle, and thus those first family words would be lost.

But gradually we find families and clans forming themselves into tribes, each tribe talking in common syllables or idioms. Now we begin to notice for the first time a linguistic similarity which enables us to study language, rather than speech, and follow its development through the ages.

THE GROWTH OF LANGUAGE

One day a man went to call on Plato and asked him what was the difference existing between words and languages [says Xanthes]. The philosopher, without replying, pointed with his finger to a plaque hung on the wall representing a goddess with her attributes.

Then, rising, he went toward a large vase filled with coloured stones and picking them up in handfuls, let them fall through his fingers in iridescent cascades.

"These," said he, "are the words or the materials.

"And here is the language," he added, showing the plaque, which was nothing more than a mosaic of a most delicate workmanship.

The languages of mankind are like beautiful mosaics, reflecting the physical and social environment of the speakers. But it took hundreds of centuries of skill and patience to create these mosaics. Some are great and beautiful; others have progressed very little since their first crude beginnings. Thus we find that the language of a people records the social development; and we agree with Max Müller that "there is an historical genuineness in ancient words, if but rightly interpreted, which cannot be rivalled by manuscripts, or coins, or monumental inscriptions."

The Aryan Languages.—Mankind has thousands of different languages. Although scattered fragments of imitative sound in root words can be found in all languages to prove the theory of an original "monkey" vocabulary, the philologists claim that there was never such a thing as one common human language.

It hardly seems probable that there would have been one. Different peoples in different places would have had their "monkey" language; but it is very doubtful whether one tribe would understand the language of the other. Gesture has this great advantage over speech: it is universally understood, and in its simplest forms cannot be mistaken. A gesture of anger, of fear, of impatience is understood the world over.

We are told that it is not possible to trace with any degree of certainty any common features in all the languages of the world. Tribes living in opposite valleys even to-day have different ways of expressing the same thing. For a long time it was impossible to find, among the Caribbean peoples, any two tribes speaking one language. Yet all languages have this common kinship: they grew out of man's first utterances in his early efforts to express his thoughts.

Probably the greatest of all languages are those belong-

ing to the Aryan group or family. This group of languages covers nearly all of Europe and stretches into India. Each language appears to be a variation of the other, and the same fundamental roots are traceable throughout all of them. In this family are included English, Spanish, French, German, Italian, Greek, Persian, Russian, Armenian, Sanskrit, and several minor Indian tongues.

The Aryan languages are by no means primitive. They appear to have become distinct about 4000 B.C.; their earliest speakers were probably past the Neolithic stage.

Latin, the language of the Romans, belongs to the Aryan group. It is of interest to us because it is in a sense a mother language and because many of the fundamental laws of our country are based upon the Roman laws which were written in Latin. Another reason for our interest is that the Bible was translated into Latin before it was translated into any other language. The Latin influence can be very definitely traced in modern English, in French, Spanish, and Italian.

Sanskrit belongs to the Aryan family and is one of its main Asiatic branches. Comparative philology, which means the comparative study of languages, was born when Sanskrit was for the first time made intelligible to the Western world. It was the key that made possible the study of all other languages of the Aryan group.

The Sanskrit language is remarkable in structure. It is more copious than Latin; more exquisitely refined than Greek. It bears in its verb roots and grammatical construction a resemblance to both of these tongues. Indeed, there have been authorities who have claimed that this resemblance is too strong to have been produced by accident and that all three languages must at some time have sprung from a common source which no longer exists.

Old Yaska, of India, was the first of all philologists. He lived about the 5th century B.C. and he was the pioneer in reading and interpreting the ancient sacred writings of India. He and the great grammarian Panini,

who wrote about 300 B.C., were the first to teach the scientific division or analysis of a word into root, stem, and suffix.

Other Great Language Groups.—A group of languages which appears to have been developed quite apart from those languages that belong to the Aryan group, is known to philology as the Semitic. Aryan-speaking and Semitic-speaking people appear in the same period, and history records them as warring together and having commercial intercourse. The languages, however, remained apart.

Included in the Semitic group are Hebrew, Arabic, Abyssinian, and a number of ancient tongues such as Assyrian and Phœnician. Both the Aryan and Semitic speakers are classed under the common head of Caucasian.

A third group of languages is known as the Hamitic. Some authorities believe that these languages have a common kinship with the Semitic, but others are inclined to disagree. It is generally believed, however, that the Hamitic languages originated along the Mediterranean, on the African coast, and radiated from there into western Europe. At that time there were land connections which would have made it possible for the Hamitic-speaking people to cross into Europe, separate widely, and carry their languages with them into new territories and among strange peoples.

In the Hamitic group are included the ancient Egyptian and Coptic, the Berber language, and the various tongues of eastern Africa. The following comparative words are just a few selected from a great list prepared by Gerald Massey to show the astonishing similarity between Egyptian words and English words actually in use to-day.

<i>English</i>	<i>Egyptian</i>
abode (habitation)	abut (abode)
ahoy (sailor's greeting)	ahaui (a salutation)
attack	atakh
autumn (the season)	atum (the red autumnal sun)
bed	pet (a crib)

Model of the magnificent Pantheon. Roman, 120-124 A. D.

*English**Egyptian*

bib (around child's neck)	beb (a collar)
cackle	kaka (to cackle)
canoe	khenna (a boat)
chase	shas (to follow)
count (a title)	kannt (a title)
cow	kau (cow)
death	tet (death)
enough	henufi (richness, fulness)
foot	fut (a measure)
gate	khet (to shut)
grape	arpe (grape)
hag (witch)	hek (magic)
ha-ha (laughter)	haa (sign of rejoicing)
hero	ma-haru (the true hero)
honour	han (to adore)
kick	khekh (to sting, to repulse)
look	ukha (to seek)
mamma (the mother)	mama (to bear)
married	mer-t (attached)
mayor	mer (he who rules)
mirror	mher (mirror)
mute	mut (silent)
nabbed (caught)	nabt (tie, noose)
nature	natr (goddess, season)
ought	haut (ought)
peck (a measure)	pekh (to measure or divide)
quick (to be fast)	khi-khi (to move with rapidity)
ray (of sunlight)	ra (the sun)
suit (to satisfy)	suta (to please)
ten (a number)	ten (to reckon or count)
twist	tust (twist)
utter	utau (speak out, give voice to)
waste	ust (waste, ruin)
write	ruit (to engrave or figure)
yacht	iti (a boat)
youth	uth (youth)

Whether this great similarity between English and Egyptian words is coincidence, or whether at some remote time there was a pro-Hamitic language which branched off into the Aryan group, is not definitely known. It is a tempting problem for speculation.

Going northeast of the areas where we find the Aryan

and Semitic tongues, we come upon a group of languages known as the Turanian. This group includes Magyar, Turkish, Manchu, Mongol, Lappish, Finnish, and the Samoyed speech of the Siberians. In the Chinese group we have in addition to the Chinese, the Burmese, the Siamese, and the Tibetan tongues.

Among the American Indians, sign language, which is another way of saying pantomime, was the first mode of expression. The Indians, more than any other people, could act and mimic with great skill. Later, in the age of imitative sound, the Indians became extremely clever in reproducing the cries of birds and beasts. We are told that the Indians imitated the cries of the animals they wished to trap when hunting and actually fooled the animals themselves.

The American-Indian languages are usually gathered into one group or family by the philologist. Among the North American Indians, languages changed with such amazing rapidity that we can find very few Indian tribes speaking the same tongue. When a tribe split up and its members were separated even for only one or two generations, they were scarcely able to understand one another when they came together again.

We have mentioned here only the largest and most important language groups. It would be tiresome to mention all the many other languages which do not come under any one great group, and which could not possibly interest an English-speaking public.

Language and Civilization.—The effect which language had upon the humanizing, or civilizing, of man must be evident to everyone.

Animals can cower in a corner—and actually do when there is a thunderstorm—to show their fear. They can growl and make ready to spring when they are angry. Primitive man, in his animal stage could do these things, and did do them in early life. They represented his only means of expression.

But with voice came speech, and with speech came language. Man was given a tremendous advantage over even the most powerful beasts of the jungle. He was able to convey his ideas definitely and tangibly to his fellows. He was able to seek their assistance, to warn them, to plan and scheme with them, to fix facts in his mind, to record, to *reason*.

Every known people, no matter how savage, has some form of language. It is developed to a greater or lesser extent according to the degree of civilization reached by the people. All languages, like the people who speak them, have passed through many ages of development; and the growth of any one language, therefore, reflects the growth and development of its speakers.

The more a people has reasoned and progressed, the more its language has developed. There are to-day certain savage tribes in Africa and Australia that have no means of counting above two. And there are elaborate languages, like English, which have close to 150,000 separate words.

It is interesting, at this point, to note that the Hebrew Testament, in all it has to say, uses less than 6,000 different words. Milton, in his entire writings, has used only 8,000 words. Shakespeare used 15,000 words, which is believed to be one of the largest vocabularies ever used by an individual. The average person in America uses less than 2,000 words in ordinary speech. And there are certain savage peoples still existing who find a few dozen words sufficient for all their needs.

LANGUAGE IN SOCIAL LIFE

From the very first man was a conceited creature. Let him but feel himself a little above his fellows, a little stronger, a little better, a little cleverer, and he set himself up as a god among them. So it was with the Old Man of the clan who made his personal belongings—and many

things not belonging to him—tabu to others. So it was with the hordes of priests and seers and wizards of early life who pretended to be in direct communication with the Unknown. So it was with the kings who gathered untold wealth about them; with the scribes who could write when others could not.

And so it must have been with the first men who mastered speech and language. We can see an imaginative fellow, discovering the powers of persuasion and entertainment which speech gave him, lording it over the others of the clan and pretending to be a favourite of the gods. We can see him combining pantomime and speech as he sits before the clan fire telling strange things that are intended to astonish and impress his hearers. Forerunner of the fiction writer!

It was this capacity for telling things that awakened in early man a social consciousness. After the day's hunt and feasting, it was good to gather around the fire and exchange tales of strange happenings. Men began to find in one another an interest that reached deeper than the mere need for the strength of numbers—the mere joining of forces against common enemies. They found, for the first time, a certain pleasure in one another's company. An instinct which had hitherto been asleep was awakened. And social life was born.

The first tales which early men told one another were probably based upon unusual incidents occurring during daily life, or strange fancies born of dreams. Doubtless each clan had its favourite story-teller—a fellow with a fertile imagination and a goodly supply of incidents who was never at a loss for a tale to entertain and astonish. He would be a sort of wise man, important and privileged. At such an early date did the ability to entertain gain for man social advantage!

Among the Eskimo it was the Old Man who was the teller of tales. It was he who knew all the traditions and creation myths of his people, he who knew all the mysteries

and magic of life. He had limitless power among his people. They obeyed him and feared him—and probably loved him for the weird, mysterious tales he told.

The Indians of North America had their “runners”—fleet-footed fellows who ran from tribe to tribe to tell their tales. They belonged to no one tribe, yet to all of them. They were safe in war-time as in peace-time; they were too entertaining, too important a part of social life, to be killed.

The love of attracting attention, of being the centre of interest, made itself felt even among the earliest of our ancestors. Simple, individual fancies were interpreted by their creators as matters of great importance and conveyed to the listening members of the clan with much flourish and pantomime. It is possible that many of the myths and legends that have come down to us through the ages had their origin in early man's love for telling things, for holding the interest of an audience.

The First Great Social Advance.—We should judge that the greatest advance in early social life, as encouraged by language, took place late in the Neolithic age. We might consider earlier man something of an individualist, roaming wherever he liked, caring nothing about clan or kin, finding expression, probably, in dancing, jumping, crying like animals, and, in the case of Palæolithic man, drawing pictures of familiar animals and things.

But Neolithic man was using words, and thinking about them, and groping about for new words to express his new ideas. He was coming under the spell of admiration; speech was beginning to bind him to his clan and his people. He began to invent and tell stories about himself, about the world, about the animals and where they came from, about the tabus of the tribe or clan and why they had to be. In other words, a tribal mind was replacing the individual mind of the earlier ages.

Out of the tribal mind grew tradition. Children, instead of being permitted to grow up wild and free with no more

training than was necessary to find food and safety, were now being *told* not to do certain things, not to eat certain things. For the first time, thoughts of the older generation were handed down to the younger. Instead of being obliged to start all over again, man was able to stand on that which had gone before, and in *his* lifetime take another step forward. Man entered definitely upon a social life for the common good. Its progress through the ages we call civilization.

It was the things that impressed Neolithic man most that he spoke about, and that we now find in the mythologies, folklore, and legends of the world. He spoke about serpents because he feared and worshipped them. He spoke about the sun and the moon and the stars because they perplexed and intrigued him. And doubtless, in an effort to increase the wonder of his tales, he dreamed of some day finding out what was beyond the mountains, who was on the other side of the sea, where the sun went to at night and the moon during the day, who lived in the clouds and what demons made the lightning.

All these thoughts appear to have rushed upon early man now that he was able to talk. We can understand how they exchanged ideas and reinforced each other's fears and hopes; how they came to common conclusions and established the tabus and traditions of their tribe; how they were being moulded into a social existence which we must recognize as the foundation upon which later civilization was built.

Words Take On a Social Significance.—As the subtleties of speech developed under man's facile tongue and ready imagination, certain words were created for special, or ceremonious, usage. In the manner that men were gradually divided into castes and classes, words were probably suffixed, prefixed, and elaborated to give them caste or class significance.

Early language consisted very largely of names. If man had one name for an ordinary spear, he doubtless had a

way of amplifying or elaborating that name when he wished to indicate that it was the chief's spear of which he spoke. Similarly, if he had one name to indicate "man" in the sense of an ordinary man of the tribe, he doubtless had another to indicate "man" in the sense of head man of the tribe, or wise man, or enemy man.

We can see how customs of politeness in speech, words and titles of deference, expressions of respect, grew out of the early word forms to indicate caste. Men would come to understand the vanities of their tribal leaders and chiefs, and the value to themselves of flattering these vanities.

Thus a kind of carefulness found its way into the speech of these rude, half-savage people, and laid the foundation for our own forms of courteous conversation.

How Language Preserved Unwritten History.—If we were to follow the development of language in its logical sequence, we would come now to a period still shrouded somewhat in uncertainty, during which infant civilizations were probably born in various parts of the world, flourished a short while, and perished; a period during which old languages grew and spread while new ones struggled into being.

But let us skip this period of development which can be of interest only to the historian or the philologist, and let us spend a few minutes instead with those most romantic and fascinating figures of early life—the bards. To them we owe the preservation of some of the world's most beautiful myths and legends; it is because of them that certain important facts of early unwritten history have not been lost to us forever.

All Aryan-speaking peoples have had their bards. They were the natural consequence of language—just as scribes and writers were the natural consequence of writing. In their simple songs and stories these bards of early life made the feats of favourite heroes live again; they brought the battlefield to the fireside; they saw history being made,

and they immortalized that history for future generations.

The bards were the guardians of tradition, the preservers of unwritten history. They were, indeed, the first historians, for we are able to glean much that is vital and of importance from their long poetical records, handed down orally from one generation to another.

All this while, you understand, there has been only an oral language—no means of writing down the things that are to be remembered, that are to be handed down to posterity. The bards seized upon every morsel of fact and fancy. They sang their songs of the past and the present; they memorized and chanted the traditions of the people; they invented and related stories based upon the fears and superstitions of the time; they greatly strengthened the development of language, and created much of the stuff that myth and folklore is made of.

The blind bard Homer singing his legends and traditions of Greece to the populace. We are indebted to Homer for the preservation of the Odyssey and the Iliad.

We know from the oral literature that has come down to us that the bards travelled among other peoples and learned of their ways and their traditions. They invented rhymes so that it would be easier to remember the many delightful things they had to tell. They refused to let old battles and old legends die. They recalled forgotten incidents of the past and made them glow with a wholly new significance. They made language live; and in their hands it became a complex, beautiful thing.

The Blind Bard Homer.—One of the greatest bards of whom we have record is Homer. He took the many verbal traditions of Greece, and of them composed the

Iliad and the Odyssey. Word for word the blind bard memorized the exploits of Achilles and Odysseus, weaving exquisite tales based upon old folklore, legends, and traditions.

We marvel at the extraordinary memory of Homer when we glance at the Iliad and the Odyssey and realize that he was able to recite them word for word. The events of these two great epics describe the way of living, the manner of dress, the thoughts of the people, the point which had been reached in social life, during the last centuries of the prehistoric era. Throughout this work there will be quotations from various epics, particularly the Odyssey, to show their influence upon our own social scheme.

Among other records that have been handed down to us by the bards are the old Sanskrit vedas; the sagas of the Teutonic people, which include the famous old English saga, "Beowulf"; and the beautiful legends of the North American Indians made familiar to us by the poet Longfellow.

Bards Flourish after Introduction of Writing.—So great was the spell of the spoken tale, that long after writing was a developed art the bards and story-tellers flourished. They survived, indeed, well into the fifteenth century in the guise of minstrels and travelling songsters. They were to be found all over Europe, in the small towns as in the large cities.

The Troubadours were a class of lyric poets who flourished from the 11th to the 13th century, chiefly in Provence, the south of France, and the north of Italy. Their tales were usually romantic in strain. At the castles of the feudal lords the Troubadour was always welcome, and he was feasted and honoured according to the quality of his tales.

England had its minstrels, more than one of whom lost his head for singing some slurring ditty against the king. And England had also its public criers who made known the news by loud proclamation.

So through the centuries has speech, or language, found a place for itself—in social life as in the life of the individual; in court life as in the life of the people. It has drawn its threads through history; it has determined usage and custom; it has influenced the character of peoples. The truth of this is reflected in the literature, oral and written, of every people.

LANGUAGE AS CONVERSATION

Language concerns us more as a matter of conversation, very naturally, than it does a matter of history. What part does language play in modern social life? And how does it affect us, who are a part of that social life?

All books on etiquette give, as one of the first social requirements, the ability to "converse in a pleasing and agreeable manner." It was Aristotle, standing beneath the porch of the Lyceum, who first taught the world that words bind souls together, that language can illumine like some magic torch the simplest and most unobtrusive environment.

Peering behind the pages of history, we find that conversational ability has played a large part in the making of leaders, of court favourites, of popular idols. The outstanding figures in social life have always been the men and women who knew how to wield language as the general wields his sword.

It is said of Ninon de Lenclos, celebrated beauty of France, that she earned her distinguished place in the brilliant circles of Parisian society almost solely through her great conversational wit. Her words charmed and fascinated. She seemed to know precisely what to say and when to say it. We are told that Louis XIV admired her tremendously for her gift of conversation. He found her always entertaining and clever.

Madame de Maintenon, whom Louis married in 1683 after the death of Maria Theresa, was also a skilled con-

versationalist and is said to have practised talking before her mirror. She was a master in the art of gesture. During the 17th century when the pendulum swung to the extreme in fashion and etiquette at the French court, and when the court favourite of the moment was the woman who could introduce something novel and unusual, Madame de Maintenon maintained her power entirely through her conversational charm.

Origin of "Drawing Room."—Having firmly established itself in social life, conversation inspired various new customs. Late in the 16th century, for instance, in England, it became the custom for the ladies to withdraw from the dining room to a special room set aside for the purpose of gossip and conversation. The men would remain in the dining room to drink and converse. It is possible that the eloquence of the conversation depended upon the quantity of liquor consumed—which is what Heywood Broun was probably thinking of when he said, recently, "If conversation is to be raised again to its former high estate, drinking is almost essential."

But to return to the withdrawing of the ladies from the dining room—a custom still observed at formal dinners. The room to which the ladies of that period withdrew came to be known as the withdrawing room. This name was used throughout the 16th and 17th centuries, and was then shortened to the more convenient term, drawing room.

And by that name it is known to-day.

The French "Causerie."—The court of Louis XIV was the centre of French social life during the greater part of the 17th century. Whatever was the custom at Versailles, aristocracy obeyed without question. The bourgeoisie (middle classes, properly meaning a freeman of a *bourg* or borough in France) aped as best they could the manners and customs of aristocracy, while the masses—as always—were too vitally concerned with the stern business of living to think in terms of social life.

During Louis XIV's reign, we are told, "The art of conversation was held above all other accomplishments." The court set the keynote, and before long there was a meeting at the Hotel Rambouillet of the great nobles, literary people, and brilliant women of France. They founded what is now known as the French *causerie* (chat). It was merely a gathering of men and women who were to meet at stated intervals at the hotel for the definite purpose of conversation—of "chatting."

Among these people of the *causerie*, people who represented the highest intellectual class in France at that time, there developed a taste for daily talks. The bourgeoisie, instantly following suit, developed an elegant and courteous manner of conversation. All of this great attention to speech could not help influencing, to a certain extent, the manners and the literature of the period.

The French *causerie* had a profound effect upon the manners and customs of France; and it had also a great influence upon English manners. We find, during the time of Charles I, that conversation takes on a certain polish and finesse that it had not before. There is a new brilliancy in repartee; an element of dignity and sense is introduced into social conversation.

In the 18th and 19th centuries special "conversational chairs" were in use in England. These were simply large, comfortable chairs which enabled the dandies to sit and converse for hours in all their glory—without crushing their ruffles or coat tails.

Origin of "Bluestocking."—This derisive name for a literary woman originated about 1750. Mrs. Elizabeth Montagu and her friends made a determined effort to introduce into society a more intellectual tone by replacing cards and gossip with literary conversation and discussions.

Most of the women who attended these meetings were conspicuous because of the plainness of their dress—which was part of their plan—and the men who attended followed the same keynote of simplicity. A certain Mr.

Stillingfleet caused special comment by appearing always in blue worsted stockings instead of the usual black silk.

Because of this last mentioned fact, Mrs. Montagu and her friends became known as the "bluestockings." Some authorities say that at a later date Mrs. Montagu deliberately adopted the blue stocking as the badge of the society. It has since become the custom to speak of literary women as "bluestockings," although the term is rapidly becoming obsolete.

Customs of Courtesy in Conversation.—There is no doubt whatever that France set the pace for courteous and polished conversation. A great deal of French gallantry and politeness which had its origin at the court of Louis XIV still remains; and though having undergone great changes, can be traced in our own courteous customs of to-day.

Titles of respect which we use in our conversation doubtless had their origin in court titles. But there are some which go back even further and had their origin in forms of respect and subservience to some greater power.

Thus "mister" (Mr.) is corrupted from "master," and is an abbreviation of *magister*. The *magister* corresponds with "magistrate" and means one who rules, commands, governs, or sets the law.

Sir was at one time a very dignified title, but through constant application it has now become a meaningless and general form of address. It is derived directly from *sieur*, the abbreviation of *seigneur*, which during the feudal system indicated the lordship of land.

Sieur and *sire* are from the same root source, and originally both signified senior, or elder. The form *sire* came before that of *sieur*; therefore the term of respect toward the elder or father preceded the term of respect toward the lord or owner of the land. Consequently, when you address a man as "sir" you are etymologically implying that he is your father.

The general use of *sir* and *madam* was most pronounced

in France during the old régime in the 18th century. The lower classes always used these titles when addressing nobility. That we still use these titles, though their original meanings have long since vanished, indicates how potent the French influence has been.

Matters of precedence in conversation still seem to concern the writers on etiquette. "A gentleman waits until the lady has spoken to him," says one recent writer. "Always let your hostess lead the conversation," says another.

In China speech is standardized by age. According to the "Li Ki," no well-bred Chinaman will introduce into the conversation a subject, no matter how important, upon which his senior has not touched.

A simple custom is observed among the Armenians. A young Armenian woman would be horrified at the idea of addressing a woman older than herself unless first spoken to.

On the Fiji Islands a woman does not talk to her mother-in-law. To do so would be considered an insult and a serious breach of etiquette. The Crow Indians, Dr. Lowie tells us, show respect to their sisters by refraining from talking to them. Among the Sioux a young man in the presence of elders does not talk until someone addresses him. Dozens of other instances might be mentioned to show how even savage peoples observe certain courtesies of speech.

Of course, etiquette to-day—true etiquette—does not attempt to varnish life with petty conventionalities. Whether the hostess talks first or the guest is largely a matter of moment and common sense; whether we talk to a stranger or not depends upon circumstances. Etiquette should not lay down definite laws but should aim instead to give poise and ease of manner through knowledge, so that one will have an armour, a protection, against embarrassment.

How to be a good Conversationalist.—In a recent advertising campaign to sell "The Book of Etiquette," a headline

was used which read "Are You Ever Tongue-Tied at a Party?" The response was phenomenal. Why? Because thousands of people *are* frequently tongue-tied at parties; because thousands of people often experience keen embarrassment through the inability to express themselves.

It seems to us that the best way to obtain conversational ease is to develop first a complete unself-consciousness. This is not as difficult as it may sound or seem. Any one can, with a little patience and perseverance, develop the kind of poise and self-possession that opens all social doors.

It is said of the famous Hawthorne that he was so shy and self-conscious that he ran out of the house whenever he saw visitors approaching, to avoid having conversation with them. His wife, who was also timid and retiring by nature, was left to entertain the guests as best she could. Instead of trying to overcome his self-consciousness, Hawthorne sought and found forgetfulness in his books. His wife, on the other hand, was forced to overcome her natural timidity and she soon amazed herself by the marvellous poise which she developed.

The first lesson one must learn in overcoming shyness and self-consciousness is to *forget* that shyness. Don't think of it. Don't think of yourself at all. Instead of shrinking from meeting strangers, meet them and talk to them as though they were your brothers and sisters. Forget all about yourself and think of things to say that will interest them.

Courtesy is the very foundation of all good conversation. If you want to be considered a good conversationalist let your proverb be "Talk well, but not too much." Listen politely, talk agreeably, avoid interrupting and express your ideas clearly and simply. Above all, be careful not to give too strong an expression of your likes and dislikes.

We heartily approve of the dictionary habit. A good command of the language gives one a great social ad-

vantage. And an excellent way to gain that command is to add one new and useful word each day to one's vocabulary.

As to the matter of slang, which seems to bother most writers, we endorse its use at the risk of inviting criticism. Slang can be colourful and expressive without being discourteous. It is part of the American language and as such must be recognized and accepted. Just one word of caution: use it discriminately and in moderation. To be truly colourful and expressive, the word of slang must be like the uncut diamond in a velvet jewel case—an unpolished word in a setting of beautiful language.

We can think of no better way to conclude this chapter on Speech than to quote this excellent bit of advice from Lord Chesterfield to his son:

When you are in company, bring the conversation to some useful subject, but *à portée* of that company. Points of history, matters of literature, the customs of particular countries, etc., are surely better subjects of conversation than the weather, dress, or fiddle-daddle stories that carry no information along with them. The characters of kings and great men are only to be learned in conversation, for they are never fairly written during their lives.

CHAPTER V

CONCERNING INTRODUCTION

Human nature is the same all over the world; but its operations are so varied by education and habit that one must see it in all its dresses in order to be intimately acquainted with it. Civility, which is a disposition to accommodate and oblige others, is essentially the same in every country; but good-breeding, as it is called, which is the manner of exerting that disposition, is different in almost every country, and merely local; and every man of sense imitates and conforms to that local good-breeding of the place which he is at.
—L. C.

THE FIRST INTRODUCTION

WE are going to turn back, for a moment, the pages of time. Can you see, with us, the Palæolithic man wandering hungry and alone in a hostile world? He scents food. At the same moment he sees another hungry fellow approaching. They are strangers. Savage, unreasoning, hungry strangers.

Perhaps they fall upon each other and fight then and there. But more likely they stand apart and stare at each other for a moment or two, clubs grasped firmly, muscles tense as the lion's before it springs.

Both hear a young bear approaching, and both at the same moment turn toward the direction from which it is coming. There is food! There are claws and teeth for ornament! There is a soft, warm skin to sleep on!

Without a sound or gesture the two savage men join forces, and quickly, deftly, silently surround and demolish the bear. That was the first introduction.

They are "friends" now, having joined forces against a common enemy. They build a fire and gorge themselves. They sleep off the bear, and wake up to begin their wanderings together, to hunt and eat and live on a friendly and peaceful basis.

Stripped of its ceremonial, what is the introduction? Is it not a social device for placing two or more people on a friendly basis? "The Book of Etiquette" says that the

purpose of the introduction is to create an immediate friendliness between two people who have met for the first time, to do away with all hesitancy and embarrassment, to create smooth and pleasant conversation, to make the strangers want to continue their acquaintance.

Is there, then, so very much difference between the introduction of primitive life and the introduction of modern life? Is not the difference one of form rather than reason?

So do instincts which once grew out of grim necessity become custom survivals in our social scheme.

The Introduction in Tribal Life.—We turn a few pages in the book of life, and the wandering individual merges into the clan; the clan grows into the tribe.

Can you see one tribe meeting another—perhaps on the desert edges of Africa, perhaps in the jungles of Australia? There are the chiefs, proud in their paint and their bear-claw ornaments. There are the tribesmen, restless and tense like wolves in a pack.

The tribal chiefs are brave, you notice. They advance a little before their fellows and stand a few paces apart examining each other curiously. They notice, perhaps, a certain similarity in appearance. Both have fuzzy hair, both have piercing black eyes, both have huge, powerful arms. A racial sympathy is born.

Now watch carefully. See how one of the tribal chiefs places his club on the ground and by gesture and pantomime indicates his willingness to be friendly. See how the other chief understands the unspoken language, how he rips off his shell ornament and offers it, how he points toward the great ox that has just been killed.

The men of both tribes relax. There is to be no warfare, but a feast instead! They are not strangers. They are friends! The chiefs squat down together while prep-

arations are made for the great ceremonial in honour of their introduction.

Friends or foe? Warfare or feast? All depends upon the manner in which the strange chiefs greet each other. Stripped of its ceremonials, the introduction is simply a social device for placing people on a friendly basis.

That night the ceremony takes place. We see a huge fire cutting through the blackness and silhouetting the jungle against the sky. We see a dozen naked savages dragging the ox for the feast. And we see a grotesque,

passionate dance performed around the two chiefs, who finally join the dancers in a weird pantomime around the roasted ox.

And we leave them feasting in friendship while the introduction passes on to its next great stage.

How Fear Encouraged the Introduction.—It is not difficult to see how fear entered into the development of the introduction. We are even to-day instinctively afraid of strangers. We feel somehow so very much more comfortable when we know precisely who everyone is, and when there are no strangers among us.

We can understand how the tribesmen looked with suspicion and distrust upon the woman whom one of their fellows captured and brought into their midst. She was a stranger among them. She might be an evil spirit, she might bring disaster upon them.

To make her one of the tribe so that she could not do any damage, they probably had a solemn tribal ceremony. A fire would be made and meat would be roasted. Perhaps there would be a dance performed by the women of the tribe around the captive woman. And then there would be feasting, and she would be forced to partake of the meat. Is it possible that this is the origin of the wedding feast of civilization?

Having partaken of the tribal food, the captive woman is no longer considered a stranger. Isn't it true in modern life that we consider more of a friend, and less likely to do us damage, the person with whom we have dined?

Just as we regard people who are unknown to us with disquiet, and perhaps with a little distrust, primitive man regarded all strangers with feelings of hostility and suspicion. He would much rather *know* that the other fellow was friendly and had good intentions than worry about having a spear hurled at him when he wasn't looking, or a rock dropped down on his head.

For his own well-being, therefore, he invited the other fellow to eat with him, to share his kill. That would

eliminate all doubt and uncertainty. Having eaten together they could not be enemies, for it was one of the beliefs of primitive life that people who ate together were clansmen or kin.

Thus the two savages, eating together, felt safe and comfortable in each other's company. The eating of the food was a symbol of peace and good will. It was their introduction. And like the introduction of to-day, it put things on a comfortable, friendly basis.

We would like to advance here a special theory of our own; we are not sure whether it has ever been advanced before or not. In primitive life whenever people of different clans or tribes were brought together on a friendly basis there was a feast. As a rule one large animal was roasted whole, and all partook of this flesh.

Isn't it possible that these primitive people, in their crude way, believed that the soul or spirit of the animal entered each one of them and bound them together? It would account for the eating of animals in religious ceremonies. It would account for the cannibalistic feasting on the bodies of the dead after warfare, on the principle that the spirits of the dead would strengthen their own spirits instead of roaming about and causing damage. It would account for the feasting at primitive marriages when a member of an enemy tribe became one of their own tribeswomen.

Notice our own custom of touching glasses when drinking together—doesn't it carry the thought of strengthening friendship? And the modern wedding feast—doesn't it carry the significance of binding the two families together?

It is a subject for endless speculation. But while it concerns us somewhat in a social sense, it has little direct bearing upon the introduction, and we leave the fascinating subject with regret.

THE CEREMONY OF EXCHANGING NAMES

To us to-day the introduction means a social ceremony pure and simple—a courteous device for making strangers known to each other and creating a tranquil, harmonious atmosphere. It required, however, long ages of slow development before the introduction became what it is to-day: the ceremony of exchanging names.

Names, of course, come with speech; and comparatively late in the development of speech. The first names were undoubtedly descriptive. The man who had more bearskins than his tribesmen was probably known by a name equivalent to our "Man of Many Bearskins"; the man who was stronger than his fellows probably had a name equivalent to "Strong Arm"; and the man who could run quickly was probably known as "Fleet Foot."

O'Brien, travelling through the South Sea Islands, encountered many such descriptive names existing among the natives. He tells us of Marquesan personalities answering to such names as Malicious Gossip, She Sleeps with God, Vanquished Often, Hot Tears, Weaver of Mats, Daughter of the Pigeon, and this most gruesome name which suggests a cannibal ancestry—Man Whose Entrails Were Roasted on a Stick! These names belonged to actual people whom O'Brien met and about whom he writes in his "White Shadows in the South Seas." Though they are four and five words long when translated into English, they are just one word in the Marquesan.

To the primitive mind, a man's name is part of his personality. Among many peoples it was believed that to know a person's name was to have a certain power over his soul. To possess a man's name was the equivalent of possessing a portion of his being, and the possessor was able to work mischief on him. Thus it was at one time a widespread custom to keep the name a secret and conceal it from all strangers.

The Arab child, for instance, was taught to conceal his family name and tell it to no one. It was believed that

if his name was known to enemies he would probably fall victim to an intertribal blood feud.

It is contrary to Corean etiquette, even to-day, to utter the name of a parent or of an uncle. A Massim would not think of pronouncing these names himself; and for others to do so in his presence he regards as insulting.

Out of the custom of concealing the name grew the later custom, among some peoples, of exchanging names to show that they trusted one another and were inclined toward friendliness. Thus among the Shoshones, "To bestow his name upon a friend is the highest compliment that one man can offer another." And in certain sections of Australia the exchange of names with a European is considered the greatest and most profound mark of brotherly feeling.

Exchange of Names in Modern Introductions.—Fundamentally, the introduction of to-day is an exchange of names. We feel more friendly toward the stranger who knows our name, and whose name we know. We no longer consider that we are entirely strange, or apart.

Problems of precedence entered the introduction at an early period. Just as it was the custom in primitive life to show deference to the most important and powerful person—the Old Man of the clan, the chief of the tribe—so it became the custom in introducing to show deference to the person of most importance. The logical way to show that deference, of course, would be to introduce people *to* him. In other words, his name would be mentioned first.

It was very possible during the age of chivalry, when the women of the court were made to feel that they were the "flower of the land"—when customs of chivalry and courtesy were created for their pleasure—that the custom of mentioning the woman's name first was definitely established. We can understand how the gallantry of the period entered the introduction and made it a thing of ceremony rather than empty form.

The etiquette books tell us that to-day the man must always be presented to the woman, which means that the woman's name is mentioned first, in this manner: "Miss Blank, may I present Mr. Jones?" But, we are informed, if the man is a prince, or a duke, or an important member of the clergy, or the President of the United States, his name is mentioned first. In other words, the courtesy established in the age of chivalry remains so long as there is an equality between the persons introduced. But let there be any great inequality between these two persons, and chivalry is forgotten while we revert to the earlier and safer rule of mankind:—deference to the person of most importance.

Concerning the Acknowledgment.—The "acknowledgment" in primitive life probably involved the life and death of the individuals. If one fellow showed signs of friendliness and the other either misinterpreted him or decided to be disagreeable and refused the proffered friendship, there would be a terrific fight then and there. You know how, even to-day, we grow warm and uncomfortable at the merest suggestion of a slight, even though it may be unintentional.

But the acknowledgment is of particular interest in modern life because it is the doorstep to friendship. We are sometimes attracted to a person by his nod or handshake. We are sometimes prejudiced against him from the start, for the same reason.

In early life there were many forms of acknowledgment. Some of them still survive. The Kingsmill Islanders, for instance, when they exchange names rub noses as a mark of greeting and friendship. The Fuegians express friendship by jumping up and down. They also have the custom of hugging and patting the newcomer, so that a European travelling among these people sometimes finds himself embraced by a friendly native. It is not a pleasant sensation to a people accustomed to shake hands on greeting.

The Andamans welcome strangers by blowing into the

hand. The Brahman to whom you have been polite enough to tell your name will salute you with the phrase, "Mayst thou be long-lived, O gentle one!" According to Spencer the Snake Indian says, "I am much pleased, I am rejoiced." With us the customary phrase is, "I am glad to meet you."

Origin of the Handshake.—With the passing of the ages, manners and customs become abbreviated and simplified. Among the New Caledonians crouching is to-day a sign of respect, as it was among most primitive peoples. Early in life prostration of the whole body was a form of inferiority. During feudal times the knee was bent in salutation. To-day a slight inclination of the head, a nod, is all that remains.

Similarly, kissing the ground on which the king had walked was once a form of obeisance. The Coast Negroes are still accustomed to fall on their knees before a superior and kiss the earth three times. Later, kissing the feet became a general form of obeisance and greeting. To-day kissing the hand still exists among some people.

The handshake itself has passed through many stages of development. In primitive life the hand must have symbolized strength and power, for it was with the hand that enemies were subdued, animals killed, spears and implements made. It would have been a sign of good will to extend the right hand, or weapon hand, and show that it was not armed, not prepared for fight. But as to this we can only conjecture; we have no way of proving it definitely.

The hand found its way into early religions possibly for the same reason,—that it signified power. In Egyptian hieroglyphics the glove is the symbol of the hand. The hieroglyphic hand is TUT, and the word signifies "to give." It means also that which is distinguished and ceremonious. Among the early Greeks the Olympian gods were prayed to in an upright position with raised hands. This presentation of the hands, joined palm to palm, was at one time required throughout Europe from an inferior

when professing obedience to a superior. The feudal vassal, doing homage, placed his joined hands between the hands of his superior. This, we can readily see, was symbolic of placing himself under the power of the suzerain or lord. It is interesting to note that the attitude of prayer as taught to children to-day is like that employed by the early Greeks—hands upstretched and joined palm to palm.

Among the Arabs it was customary for a long time to kiss the hand of a superior. Later, among polite Arabs, the offer of an inferior to kiss the hand of a superior was resisted. Probably the two persons each wished to make obeisance to the other by kissing the hand, and each out of compliment refused to have his own hand kissed. Can you see what would happen? There would be a clasping of the hands and a scuffle while each tried to raise to his lips the hand of the other and "though at first such an action would be irregular, yet later it becomes a regular and rythmical motion."

The early Greeks extended the right hand of fellowship to a stranger. Salt was presented to him as a symbol of hospitality and to indicate that he would be safe under the entertainer's roof.

So through the centuries did the use of hands descend into social intercourse. To-day we extend our hand in greeting instinctively, impulsively, without stopping to think about it. Yet it is an ancient custom that has belonged to mankind for ages and that has been handed down to us through many generations.

Of course, there have been many variations of the handshake. The Ainu simply rubs his palms together and strokes his beard. Negro chiefs on the coast of Africa snap the middle finger three times when greeting. In the Banks Islands a man locks the middle finger of his right hand with the corresponding finger of the man he wishes to greet, and pulls it away with a crack.

The correct acknowledgment of to-day is a firm, cordial

handclasp or the friendly smile and inclination of the head. The flourish, finger-tipping, and high handshaking of the last generation have passed out with other affectations.

Custom of Raising the Hat.—Like the extending of the hand, the raising of the hat passed through many stages of development. We must seek its true origin, doubtless, in the stripping of captives in early life to prove their entire subjugation.

Thus among the Assyrians it was the custom to strip completely the men captured by them in warfare. Their nakedness indicated their inferiority, their subjugation to the Assyrians.

Nakedness, partial or complete, was a form of obeisance in early life. The uncovering of the upper part of the body was, and still is, a particularly widespread custom among uncivilized peoples. The Tahitians, for instance, uncover the body as low as the waist in the presence of a king. It is very possible that the uncovering of the head was suggested by the uncovering of the upper part of the body.

Asiatics have made familiar to us the custom of baring the feet. The Japanese have the custom of removing a slipper when they salute ceremoniously. In Persia everyone who approaches the royal presence bares his feet. Similarly in ancient Greece and Rome worshippers at certain shrines were compelled to remove their sandals. And among the people of Arakan it is still the custom to remove the sandals in the street and the stockings in the house as a sign of greeting.

On the African continent there exist many variations of disrobing for the purpose of showing respect or subservience. An Ethiopian, for instance, takes the corner of a stranger's robe and ties it about himself, so as to leave the other almost naked. In some sections baring the shoulder is like unhatting among us, and is a custom frequently observed. Incidentally, among some Africans as

among the natives of Tasmania, it is considered natural politeness for a man to turn away when he sees a woman. Does this have any bearing upon our own custom of waiting for a woman to make first sign of recognition?

During the age of chivalry it was customary for knights to wear full armour in public. In accosting each other friendly knights raised the visor as a sign of mutual recognition. And upon entering an assembly of friends, the knight removed his helmet entirely. This was symbolic of the fact that he believed himself safe among friends and had no need for his protecting helmet.

This raising of the helmet in days of chivalry was doubtless an impetus to the already established custom of raising the hat as a mark of courtesy. And as a mark of courtesy we still retain the little ceremony of raising the hat and of removing it entirely in the presence of friends. That the custom in modern life concerns the raising of the hat to women more than men is simply due to the fact that ceremonial customs of any sort tend to become less pronounced among the members of one sex, even while they become intensified between the sexes.

Some Curious Customs of Greetings.—With us the raising of the hat and the extending of the hand are merely a polite part of our social scheme and do not carry with them any very great significance. But they happen to be much modified survivals of primitive forms of obeisance and salutation; and while they have become mere forms in civilized life, they still exist as parts of important ceremonial among certain peoples who have not followed the march of civilization.

On the Sandwich Islands, for instance, complete prostration is the sign of respect and politeness. The form has not been abbreviated to a simple inclination of the head, as among us. However, these people have one custom in common with us. They believe that to sit or recline while superiors are standing is a mark of disrespect.

Every one knows of the minute politeness of the East.

Among certain peoples the formalities of meeting and greeting occupy at least a quarter of an hour.

The Chinese, who have a kind of ritual by which they regulate the number of words and bows to be used, not only depreciate their own status in greeting, but attempt to exaggerate that of the other person. The result is a verbose salutation which is somewhat tedious to the traveller.

If a Chinese man meets another after a long separation, he falls on his knees, bends his face to the earth, and employs other affected modes of greeting. But the common salutation amongst the lower orders is simply an inclination of the body and the phrase, "*Ya fan?*"—meaning, "Have you eaten your rice?" With the influx of the Europeans into China many of the old and picturesque customs are falling into disuse. A good many are already obsolete, except in the smaller provinces.

The Japanese do not kiss or clasp hands. But they have an exquisite courtesy and kindness which never fails to impress the stranger.

Kissing as a form of greeting and affection did not come until comparatively late. The habit of kissing is unknown to the Polynesians who greet by pressing noses. The Laplanders also apply their noses against the person they wish to salute. In Otaheite, we are told, they rub their noses together, and of course we all know this is the favourite form of greeting and affection among the Eskimos.

The Greenlanders have no forms of introduction and no forms of greeting based upon precedence or superiority. They laugh at the idea of one person being inferior to another.

The North American Indians, though of extreme politeness and noted for their hospitality, do not have many conventional forms of salutation. Their etiquette is to meet in silence and generally to smoke before speaking. Smoking together among the Indians is symbolic of peace

and friendliness, just as eating together symbolizes friendliness among other peoples.

We are told that islanders near the Philippines take a person's hand or foot and rub it over their face. In the Straits of the Sound it is customary to raise the left foot of the person greeted, pass it gently over the right leg, and then over the face—a rather complicated and awkward ceremony. Natives of the Philippines bend very low, raising one foot in the air with the knee bent. They also place their hands on their cheeks in saluting a friend.

The inhabitants of Carmene, when they wish to indicate particular attachment, break a vein and present the blood to the friend or acquaintance as a beverage. To refuse to drink the beverage is as much an insult as to refuse to acknowledge an introduction in modern life.

Lefevre tells us of the early Romans that

if any one entered whilst they were sitting, they rose up to do him honour, and did not meet in the streets without saluting each other, in the morning with the word "*Ave*" and in the evening with "*Salve*." It was the custom to cover the head with a corner of the robe to defend it from the injuries of the weather; but when any acquaintance accosted them, they immediately uncovered.

In New Ireland when one man says to another "I am glad to see you" he pats him on the head. With us he slaps him on the back.

In following any custom through its periods of development we must remember that man has always been influenced by his environment. The Europeans with their mountains and their clear, cool air, and their lakes and seas, very naturally were of a different type than the people of Central Africa, who lived and bred in the heat of the jungle. They developed more rapidly because natural conditions were more favourable to development. To-day they have civilization and culture; but civilization has not yet penetrated to the heart of the jungle in Central Africa.

We can see, even from the customs of salutation and

greeting in the various countries, how natural conditions affect the manners and customs of the people. The Dutch, for instance, who are known to be great eaters, have a morning salutation which is common to all ranks and classes. People say to one another, "*Smaakel yk eeten!*" (May you eat a hearty dinner!) as frequently as we say, "Good morning."

In Cairo, where a dry skin is a sure indication of a destructive fever, the usual salutation is the equivalent for our "How do you sweat?"

The proud gait of the Spaniard and his haughty, inflexible solemnity are expressed in his mode of salutation. He says simply, "*¿Cómo está?*" (How do you stand?) The French carries a more frivolous tone, a certain light gaiety characteristic of the Frenchman: "*Comment vous portez-vous?*" (How do you carry yourself?)

Leave-taking has always been ceremonious. One Arab, when leaving another to whom he has been introduced, usually says, "May your day be white!" The answer is, "May your day be like milk."

The Papuans have a curious mode of leave-taking. They smear themselves with river mud and wail piteously. It sounds sincere enough until the stranger is out of sight. Then they wash off the mud and begin singing, laughing, and enjoying themselves again.

Before leaving, a group of Abipones will say, "*Ma chik kla leyá?*" (Have we not talked enough?) No attention is paid to the first person who quotes this customary phrase. But the next person takes it up, repeats it, and it travels around the circle. The last person says, "*Kla leyá?*" (We have talked enough), and they all rise together and depart in their various ways.

CHAPTER VI

DÉBUTANTES OF YESTERDAY

When human beings began to come together in social relations there developed among them customs, or methods of action, sanctioned by usage. If a person lives by himself he becomes a law unto himself, but if he lives with his fellows, his habits must harmonize with theirs for the sake of the common welfare. Hence, in early civilization whatever conduced to group safety was enforced by public opinion. Conversely what was inimical to public safety was frowned on, and became tabu, or prohibited.

—J. Q. DEALEY.

THE GIRL IN PRIMITIVE LIFE

NOTHING very definite is known about woman in early life. She seems to be the background against which man emerged from the darkness and made himself known.

The little information which has been culled from various corners of the world seems to indicate that among some early peoples the woman was worshipped and feared; among others she was subjugated and made to feel her inferiority. We know, however, that primitive man feared whatever he did not understand; and it is very possible that the miracle of birth so filled him with awe and amazement that he regarded all of womankind with a superstitious respect.

Nevertheless, the position of the young girl in primitive life must have been precarious. For a while, undoubtedly, she romped and played as any young child does to-day—with pebbles and knuckle-bones as playthings instead of kiddie cars and clever mechanical toys. But as she approached marriageable age, she was either stolen by some wandering tribe or bartered by her own people.

Woman is of the "weaker sex" not only because biology

A 19th Century interpretation of the primitive chant. By MacNeil.

makes her so, but because ages of social unfairness have accentuated her weakness through the centuries. In the dawn of life, while her brothers were being taught to fight and kill and protect themselves, while they hunted and fished and learned to make spears and arrows, she was confined to one little spot where she was assured protection. We have many instances of her actually being forced to live in a cage for many years, until her people were ready to sell or exchange her in marriage.

Under conditions such as these, the primitive "débutante" must have found life wretched in the extreme. She dared not wander far from the camp, lest she be captured by a wandering beast or man. Yet certain writers tell us that conditions within the tribe or clan were so difficult for the girl, so many hardships were forced upon her, that frequently she wandered from her people purposely, permitting herself to be captured and carried away as a bride.

But barbarous though they may have been, devoid of love and gentleness, primitive peoples seem to have had a very pronounced moral sense. They recognized as dangerous that which we, of a later age and advanced civilization, consider sinful. There are to be found, among most savage peoples, curious customs which were intended primarily for the protection of the young girl.

Separation of the Sexes.—Whether for purposes of protection, religious tabu, or personal gain, savage man kept his young women apart from the rest of the tribe. Perhaps a little of all three elements entered into the separation. That we do not know. But it has been definitely established that the separation of the sexes was one of man's earliest institutions.

Among certain animals, when the young are in a helpless state they are carried about by their parents—the males by the father and the females by the mother. Nature seems to have arranged for this by instinct. In savage life it was quite the natural thing for young boys to go

with their father and for girls to remain with their mother.

In Australia, New Caledonia, and various other countries, brothers and sisters were not even permitted to talk to each other. We are told by some authorities that in primitive life it was the custom among certain Australian tribes to kill the young girl who permitted herself to be seen by her brothers. To-day a boy does not enter his sister's room without trepidation. How much of it is due to courtesy and custom and how much to inherent fear of "sin" is a matter for speculation.

Among the Nairs of Malabar it is considered a great dishonour for a man to remain in the same room with his sister. Similarly, in Tonga men are most reserved in their behaviour toward their sisters. A chief in Tonga never enters the house of his eldest sister. It would be considered an insult for him to do so.

Mr. Pritchard, who lived among the Samoans and studied their manners and customs, says:

Of all their customs, the most strictly observed, perhaps, was that which forbade the remotest reference to anything, even by way of a joke, that conveyed the slightest indelicacy in thought or word or gesture, when brothers and sisters were together. In the presence of his sister, the wildest rake was always modest and moral. In presence of her brother, the most accommodating coquette was always chaste and reserved. This custom remains intact to the present day.

The sexual tabu, forbidding marriage within the same totem or among kin, probably induced the separation of children in the home in a religious sense among many savage peoples. These sexual tabus seem to account also for the seclusion of girls in primitive life, of which our own *début* dance, our own "coming out" party, is a survival.

Seclusion of the "Débutante."—Among early peoples, each sex was made tabu to the other. But while the men were permitted to roam freely where they pleased, while they were allowed to join in the hunt with their elders,

the young women were carefully secluded and in many instances actually imprisoned. We are told of many savages who imprisoned their girls in "cages" from puberty to marriage, and that during the imprisonment they were not seen by any men—not even the men of their own family. Thus Kaffir girls at puberty are even to-day placed in separate huts where none but females are permitted to visit them.

Loango girls at puberty are secluded in huts which are built for that purpose in the forest, and no man may venture near them under pain of death. From the very

Among many savage peoples the girl is tabu and she is confined to a little hut until married. The coming out of the hut is accompanied by much celebration—a custom paralleled in modern life by the "coming out" party of the debutante.

first day of their seclusion they are instructed in the duties of married life and motherhood, and this instruction continues until they are given in marriage. During the period of her seclusion, the Loango girl is called *nkumbi* (hymen).

The Cambodians speak of this custom of seclusion as "entering the shade." The Cambodian girl who "enters the shade" must promise not to let herself be seen by a man; not to look at men herself; not to bathe until night; not to eat certain forbidden foods.

It appears that in many instances certain foods were

forbidden young people. A Wagogo child was not permitted to eat the liver, kidneys, or heart of any animal until reaching a specified age. The Yaunde was strictly forbidden the flesh of sheep or goat until after initiation. In New South Wales only married men were permitted to eat duck. Young Fijians even to this day do not eat river fish or eels until they reach a certain age.

You know how modern parents exact the promise from young people not to smoke or take after-dinner coffee until they reach the age of twenty-one. You know how young girls are told that they may not have such and such a thing, or may not do such and such a thing, until after their "coming out." It is an interesting parallel.

But to return to the custom of seclusion. We are told that in New Ireland girls were at one time confined for four or five years in small cages. They were kept in the dark and were not allowed to set foot on the ground. The girls were placed in the cages when quite young and were forced to remain there until they were young women. Then they were taken out, given a great feast, and permitted to marry. Don't you see in this a prophecy of the *début* dance of later civilizations?

The natives of Vancouver Island place their girls in a sort of gallery in the house, surrounding them completely with mats so that they cannot be seen by men.

Amongst the Zulus, as amongst most South African tribes, the girl is secluded in a hut for some time after the first appearance of puberty. Many of these peoples have elaborate ceremonies when the girls "come out." It is remarkable that the term "coming out" should have survived even to our own polished 20th-century civilization, in connection with the *débutante* who "comes out" of social seclusion and is introduced to society.

In China and Japan young girls are kept carefully separated from the other sex even to this day. And we are told that it was a custom until recently for the Hindu girl to be kept in a dark room for four days, upon reaching

maturity, and she was forbidden to see the sun or receive visits even from the men of her own family. The sun probably has a religious significance. Its fertilizing powers were well known to early peoples, and they probably connected it in some way with birth and procreation.

High Degree of Morality Among Primitives.—As has already been indicated, early peoples had a sense of morality despite their barbarism. We find an astonishing morality even among the savage races still existing.

The Kaffir woman, for instance, is extremely chaste and modest.

Among the inhabitants of Lob-nor, a people whose social scheme is wretched in the extreme, immorality is severely punished.

In New Guinea chastity is strictly maintained and immorality is punished.

Mr. Winwood Reade tells us that among the Equatorial Africans, the girl who disgraces her family by wantonness is banished from her clan. He adds that in cases of seduction the man is flogged—sometimes killed. Nevertheless, it must be mentioned that some African tribes have no morality whatever and live even to-day in a state of promiscuity.

Among various Northern Indians girls were from early age prohibited by custom from joining in the most innocent amusements with boys. Even the girl of seven or eight was guarded rigidly and forbidden to play with children of the opposite sex.

Tribes of the East Coast in Madagascar have a high morality. The sexes are separated in early life and the girls are carefully guarded.

The Corean girl is taught that it is disgraceful to permit herself to be seen or spoken to by a man outside of her family circle. Perhaps this accounts for her great modesty. After the age of eight she is forbidden to enter the men's quarters of her own home. She is scrupulously kept from any sort of intercourse with the male sex until

marriage. No modern débutante receives more protection than the young Corean miss.

The Original "Coming-Out" Party.—The "coming-out" party of modern life seems to be a vestige or relic of the time when girls "came out" of the huts where they had been imprisoned—and were offered in marriage to the highest bidder, the best hunter, or the man betrothed in infancy, according to the custom of the people.

Coming out of the hut symbolized to early peoples the putting away of the old life of childhood and sexlessness—the taking up of the new life of young womanhood and its responsibilities. Like all changes in life, it was dramatized. We can see these early "débutés"—the girls half glad and half sad, thrilled with their new freedom, proud of their momentary importance, afraid of their new duties, for all the world as excited as the débutante of to-day! And we can see the men dancing around them, painted and decorated for the occasion, shouting and feasting and dancing in weird pantomime—making a ceremony of the business of selecting a bride.

In modern American society the proper age for the début is eighteen. There are usually a dance and a dinner—and, if the truth be known, a set of young men and a set of young women studying one another with an eye for matrimonial possibilities!

Of course, the débutante of to-day is far removed from the débutante of yesterday who was imprisoned in a hut and who, more frequently than not, had her husband selected for her. Each new generation does things which the generation before would have considered "impossible"; and each fading generation laments the boldness and self-assertiveness of the new. But human nature is essentially the same as it was ages ago, and life goes on in the same old groove, scarcely changing its course despite the automobile and the freedom it has brought, despite the rolled stockings and the cigarette case of the girl who

breaks down traditions, despite the new generations that are constantly treading upon the toes of the old.

The débutante of to-day is taken to Europe, as a rule, to get a glimpse of foreign social life. She is instructed at home, if she is not fortunate enough to be given the European trip; but by no means may she "come out" until she knows precisely what to do and say, precisely what is expected of her as a member of society.

In primitive life, we find that it was the custom to prepare youth for their mutual relations in later life. The Swahili girls at puberty were, and still are to some extent, instructed in matters relating to sex and motherhood. The Apache girls on arriving at the marriageable age were instructed by the chief in the duties and responsibilities of married life. Among various African tribes, and among certain Australian peoples, the girls were entrusted with such feminine lore as the woman possessed, and were instructed in matters of importance concerning marriage and motherhood. The boys were instructed in all the secrets of tribal history and religion, and the cherished tribal myths and legends were related to them.

The girls alone did not suffer in primitive life. They were imprisoned and they were obliged to accept in matrimony men they had never seen before, but the boys had to undergo cruel and barbarous initiation customs. Tests of endurance were imposed upon them. Among certain peoples they were beaten; among others they were obliged to fast for long periods. Among many savage peoples it was the custom for a finger to be cut off, or a tooth or two knocked out. It was a curious belief among savages that to remove or sacrifice one part of the body was to purify the whole.

These ceremonies of initiation form an important part of savage life. In Australia there is a universal law which forbids a youth to marry until after the ceremonies of initiation have been concluded. At these ceremonies the boy is sometimes given instruction in his future duties.

No boy is considered a man until he has gone through the initiation ceremonies prescribed by his particular tribe.

Incidentally, it is very possible that our custom of initiation among young people seeking admission to clubs or fraternities had its origin in the customs of initiation among primitive peoples—customs which changed the status of boy to man.

A "Début" Dance among the Indians.—If you have ever witnessed a true Indian dance you know that you can never forget the thrill of it, the almost uncanny eloquence of it. It is almost like a language. The weird steps and pantomimic gestures of the dancers seem to speak.

Secretary of the Interior Work recently received a report from the superintendent of the Reno Indian reservation in Nevada, telling of the unique "début" dance which is still a prominent part of the social life of the Washoe Indians. We quote the following from a New York newspaper:

The dance or ceremony is called "the girl's dance," and the girl who is the central figure eats nothing for a period of four days. On the fourth night the dance is held, beginning at eight o'clock in the evening and continuing until sunrise the following morning. It consists of the Indians joining hands in a circle and moving by short dance-steps sideways around the ring, humming a sort of chant without words or meaning. The girl, accompanied by some older woman, evidently a chaperon, carries a long staff to support her because of her weakness through loss of food during her fast, weaves in and out of the dance, and joins in the steps.

As the dance proceeds late into the night, the family of the girl give money and other possessions to the dancers to keep them moving and to induce others to join in the dance, the greatest number of dancers signifying the popularity of the family. Shortly after midnight a big feast is given by the girl's relatives, all present participating.

The ceremony closes at sunrise, when the girl is taken inside of her tepee and attired in bunches of sagebrush, in which money is concealed. She appears later before the assembled dancers outside and throws the money to them amid a wild scramble. A can of

water is then dashed over her head, concluding the ceremony, after which she is ready to receive a proposal of marriage.

Many Indians, like those of the Reno reservation, have preserved their age-old customs and ceremonials. We see in all of them an inclination to celebrate with dance and pantomime the important periods of life. And there are few celebrations as elaborate and impressive as those that, in various tribes, mark the change from girlhood to young womanhood—the period during which the young woman “comes out” and is ready for marriage.

The Chaperon in Antiquity.—In an early social scheme where girls were kept secluded and sexual tabus were made and enforced, one can see the importance of the “chaperon.” She was the guardian of the tribal chastity; she was the protector of the unmarried girls; she saw that the tribal tabus were obeyed.

We to-day consider sinful what primitive man considered dangerous and contrary to the natural laws. That eliminates, to a certain extent, the need for a “chaperon.” But a few examples will show how absolutely essential she was in early life.

Among many African, Australian, and early Asiatic peoples, the girl who was betrothed in infancy to some important person was kept secluded in a small cage until she was ready for marriage. The man of importance would see that she was carefully guarded and kept from all intercourse with the other sex. He would select a woman whom he trusted, and place the girl in her care. This woman was the original chaperon.

After betrothal in Nias, Borneo, and the Watubella Islands no communication between the pair is permitted until the day of the wedding. To enforce this custom the girl is carefully guarded by a woman retained for the purpose. This woman, like the chaperon of more recent times, accompanies the betrothed girl wherever she goes.

Similarly, in Buru, Ceram, and Luang Sermata a youth,

when engaged, may not venture near his fiancée. She is not permitted to look at him or speak to him. Here again we find the girl guarded by a woman to see that the betrothal law is obeyed.

Among the Loango Negroes, the mother is the girl's "chaperon." No Loango youth would dare to speak to a girl if she were not with her mother. In her mother's presence, however, it is perfectly good etiquette for him to do so.

Wives of the chiefs in Tonga are not permitted to walk abroad without women attendants. We are told that in early Rome the same sort of custom prevailed. No woman of importance would venture forth without her "lady." Indeed, no matter in what country we search, and no matter among what people, we find someone who seems to parallel the chaperon of a later day—someone who serves in the capacity of protector, advisor, guardian, or companion.

Perhaps it was for selfish reasons that the young girl was protected in early life. A marriageable daughter was an asset to the family, a valuable and marketable possession. As such she had to be protected. She might run away and deprive the family of her bride-price. She might be stolen by some other people, her tribe might attempt to recapture her, and warfare would result. All things considered, the wisest and safest thing was to keep her carefully secluded and carefully guarded. Hence—the chaperon.

As interpreted in a later civilization, chaperon means companion more than guardian. Where there is no seclusion of the sexes, no chaperon to guard the secluded is needed. Where there are no tribal tabus to be enforced, no chaperon to enforce the tabus is needed. Thus the original chaperon gradually lost her position of power and importance and merged into the companion and associate of a later day.

As is the case with most customs that grew out of the

necessities of early life, the custom of the chaperon is fast falling into disuse; indeed, in the United States it is practically obsolete. But so difficult is it for custom to die that we find the chaperon still firmly entrenched in the social life of various European countries—a social figurehead, as kings are fast becoming royal figureheads.

CHAPTER VII

A SHORT HISTORY OF COURTSHIP

Because of her motherhood, woman's sexual nature gradually became purer than man's. The child became more and more the centre of her thoughts and her deeds. Thus the strength of her erotic instincts diminished. The tenderness awakened in her by her children also benefited the father. Out of this tenderness—as also out of the admiration for the manly qualities which the father developed in defence of herself and her children—gradually arose the erotic feeling directed to this man alone. Thus love began.

—ELLEN KEY.

THE FIRST KIND OF COURTSHIP

FROM the very first men have wooed and won the women of their choice. Whether the wooing took the form of brutal capture, of purchase, or of actual courtship depended entirely upon the period or stage of development and upon existing conditions.

Some authorities believe that the very first form of courtship was a system of pairing off, such as is found among the lower animals. They tell us that it is very probable that in the earliest times a human pairing system existed. They place this season at about the time that would correspond to our June, which seems to account, to some extent, for the age-old desire for marriage in that month.

This first pairing off of men and women would scarcely be in the nature of courtship. We cannot conceive of the element of love entering into it at all. The male undoubtedly played the more active part, as is true in the courtship of almost all animal species. So deeply ingrained is this instinct in human nature that it is even to-day considered immodest and indelicate for the woman to take any active part whatever in the courting.

We can understand, however, how even at this early period women tried to make themselves attractive to the men. What chance had they, alone and unprotected, in a hostile world? It was good to have a man to hunt and bring in food, to fight off dangerous animals, to bring in queer shells and soft skins.

And so, in the pairing season the woman would be as eager to find a mate as the man was to find a woman. But very probably the courtship was entirely a one-sided affair, the woman having very little to do in the matter. While the man might select at will, she was obliged to go with whatever man to whose fancy she appealed. Thus was inequality between the sexes born in the very earliest period of life, and its influence has permeated through the social fabric of all ages.

Yet it is very possible that in this early pairing season woman had various ways, of which we know nothing, of making herself attractive to man. Necessity has always been the mother of invention, and despite the unfair conditions against which she had to contend, we feel certain that early woman had some means of winning the man she wanted.

But on the whole, courtship would have been brief, rude, with little or no preliminaries. Perhaps he would come upon her as she bathed in the stream, a little distance from her people, and would carry her off without further ado. One authority tells us that women actually wandered away from safety and protection for the purpose of being carried off by a man. It was better to be the property of one man than the property of the whole tribe.

Or perhaps she would come upon him while he battled with a bear or some other beast, and she would squat down nearby until the beast had been demolished. Then by gesture and expression she would indicate her admiration. We can see the fellow puffing out in pride, beating his chest and crying out in defiance of the whole world. Perhaps he rips off the claws of the animal and gives them

to the woman as ornaments. And we can see them going off together—a woman and her mate—after this brief, simple courtship.

The Dawn of Love.—No one knows precisely when love began, or how it began, or even whether it is a natural or developed instinct. Many have written on the subject. Many have expressed their opinions. But the true origin of love must for ever be lost in the dim ages of the beginning of mankind.

We are inclined to believe that mankind always had the capacity to love but that for ages love was a dormant instinct, asleep, while man struggled for his foothold on life. During the first difficult ages of development there could have been no awakening of love, no definite consciousness of the finer instincts.

But let us skip a few pages in the book of life and come to that period when man is chiefly carnivorous, and when he is established in a cave home with his woman and his children. We see now the importance of the male in supplying food for the subsistence of the children; and we can see the woman, in an awakening love for the children, drawn in a deeper attachment toward the father. It is he who supplies them with food. It is he who rolls the rock down upon enemies and keeps his family safe. Thus, as Ellen Key points out, the need for protecting the child and supplying it with food was the spark that fanned the tiny flame of love into glowing; and it has been glowing with greater and greater intensity ever since.

Of course, love as we interpret it to-day belongs to a highly advanced civilization. The love that gives without thought of gain, the love that is self-sacrificing and self-effacing, is an entirely different kind of love from that which we find among primitive men and women who continue to live together solely because of benefits to be derived for the young. But this is a book of origins, and if we are to go back to the true and original source of love, we must find its first spark centred around the child and the home.

The blossoming and developing of love into one of the most exquisite and inspiring instincts of civilized life is a vast subject in itself, and a proper study of it would require a volume.

EARLY BETROTHALS

The courtship we have been considering thus far is the courtship that in primitive life precipitated almost instant marriage. Now let us consider courtship in the sense of the betrothal or engagement. This form of courtship came when men were already established in clans and tribes, and when savage peoples were in various ways endeavouring to make themselves attractive to the opposite sex—by ornamenting, mutilating, painting, and tattooing themselves.

There were diverse ways for obtaining a wife. Of course, there was marriage by capture, which we will forget for the moment. But in early life betrothals were frequently arranged by parents between infants, sometimes even before they were born. Relatives frequently selected a bride for the youth, usually one who would be profitable to their own ends. True courtship did not exist to any very great extent, and love, if it entered into the matter at all, was a rare and uncommon thing.

It is interesting to note the betrothal customs of early savage peoples. We are told that among the Javanese courtship was carried on entirely through the medium of the parents. On the Sandwich Islands the father had the power of life and death over his children, and could promise them in marriage to suit his own whims and fancies. The Mandingo girl was obliged to marry the suitor selected for her by her people, or remain for ever after unmarried.

Wrestling and fighting appear to have been a primitive method of courtship. This was among people who did not practise infant betrothal and among whom children were permitted to select their own mates. If a young woman had two suitors they fought together, and the

stronger won the bride. This corresponds with the custom, among various peoples, of forcing young men to undergo tests of endurance before granting them permission to marry. The underlying principle, of course, is that no man may have a wife until he can prove that he is able to protect her.

The beautiful Atalanta, we are told, gave herself to the best runner. The hero suitors of the Finnish myths had to undergo difficult trials to prove their courage. The Dyak was obliged to show himself a hero before he could marry. You know how, even to-day, women worship feats of strength; if a modern woman has two suitors she will invariably select the one she believes to be the stronger and the more courageous. It is the old, old instinct of self-preservation.

In Wales, a ceremonious betrothal usually came first, after which a sham fight was staged. The betrothal was usually arranged by the parents. But among the Muscovites an actual invasion came first, as a rule, and the bridegroom's party carried off the lady. Later, the consent of the parents was sought, and if obtained there was great feasting and celebrating in the form of a betrothal or before-the-wedding party.

Whenever an alliance was desired among the North American Indians, the young man himself presented to the parents of the young woman he sought to marry a belt of wampum, a bracelet, or some such gift. If she received it, it was a sign that he was accepted and preparations for the wedding feast were started at once. Courtship among the Indians was always simple and brief.

The Custom of Infant Betrothal.—One of the most widespread customs of betrothal in primitive life was that of promising a child in infancy. And among most peoples this betrothal was considered as binding as marriage. Among the Yorubas a child betrothed by her parents is considered practically a wife.

In New Caledonia it was the custom to betroth a girl

"The Wandering Minstrel."

A water colour by A. L. Leloir (1873).

as soon as she was born. This custom still exists to a very great extent among the New Caledonians.

The Bushmen generally betroth their daughters as children without consulting them. But if a girl grows up without having been betrothed in childhood, she may select her husband and marry without the consent of her parents.

In the Fijis children are married by their parents when they are three or four years old. This marriage is merely a ceremony, but it is a binding ceremony, and when the children grow up they are man and wife.

Among the Tasmanians wives are as a rule betrothed to their husbands from infancy. The parents usually arrange marriages for their own selfish gain.

The Yorubas, Mandingoes, and Koosa Kaffirs follow the custom of infant betrothal. Among these peoples infant betrothal has been a custom for many long ages, and they know no other form.

Among certain Eskimo tribes as soon as a girl is born a young man who wants her for a wife, or the father of that young man, goes to the father of the child and makes the offer of marriage. If he is accepted, a betrothal promise is given which is considered as binding as our own marriage ceremony. The girl is delivered at the proper age. Sometimes she does not see her husband until the day of the marriage.

Infant-marriage as a form of betrothal is common in British India, in the Malay Archipelago, among the Samoyedes. This type of betrothal is found also in New Guinea, New Zealand, Tahiti, and many other islands of the South Seas.

The custom of promising brides in childhood existed among some European countries during the early periods of civilization. Spain knew the custom; it existed at one time in Russia. And we know from our history how frequently brides were promised to infant royalty in both France and England.

The Bullroarer in Courtship.—Among the Australians

of the Arunta and other neighbouring peoples, among many African tribes and among the Apache, Navajo, and various other Indians, traces have been found of a remarkable instrument which has been given the English name of "bullroarer." We mention it here because at one time it played an important part in courtship.

The bullroarer is simply a small, flat slip of wood through one end of which a hole is made. A string is passed through this hole, and by means of this string the instrument is swung around rapidly. It makes a peculiar booming, humming noise.

This instrument was treated with the utmost respect among primitive peoples. The Blackfellows particularly feared and worshipped it, using it to a great extent in their initiation ceremonies. Among many African peoples it was used, and is still used to-day, in festivities and dances.

It was at one time a common belief among various peoples that a man could charm a woman to love him by making the peculiar humming sound with the bullroarer. The sound or humming was considered a sort of spiritual invitation. Instances have been recorded of women using the bullroarer to charm the men they sought as husbands.

In the Yaroinga tribe, and among neighbouring tribes, each boy at puberty was given a bullroarer. It was symbolic of the fact that he was now ready to woo and win a wife. The instrument had the highest mystic significance and the boy valued it as one of his most important possessions. To-day it is no longer held in superstitious dread, although it is still to be found in actual use in religious ceremonies among various savage peoples.

Did the serenade of later life grow out of the bullroarer and its reputation for charming the ladies? One wonders.

ROMANCE ENTERS COURTSHIP

It seems to us that romance must have entered courtship when the struggle for mere existence became less pronounced—and mankind began to day-dream.

It would have been a crude and elementary sort of romance at first. A girl stealing away from her tribe at night to join a youth with whom she had been forbidden marriage. A savage fellow forgetting the chase and watching at the stream for hours for another glimpse of the girl he had seen there. A necklace of claws, made with painstaking care and offered without a word, accepted without acknowledgment. We suspect that many such instances of tenderness and of simple romance lie hidden beneath the known facts of early man.

But as we follow the customs of betrothal and courtship through many centuries of development, we find that romance and civilization mark time together. Where infant civilizations flame out of the long darkness that is prehistory, cutting through the blackness like tiny shafts of light to show us the way, there we find for the first time actual recorded instances of romances.

In Greece, for instance, we find names being inscribed by lovers on trees—a custom which still survives. We find flowers telling their eloquent tale of love. The doors of beautiful maidens were decked, we are told, from morning to night with flowers placed there by their lovers.

A solemn betrothal almost invariably preceded the actual marriage in Greece. At this betrothal the dowry of the bride was settled, and it is interesting to note that her position as a married woman depended largely upon the value of this dowry. Records have come down to us of the daughters of poor but worthy citizens being presented with dowries by the state or by a number of private citizens.

Exchange of Gifts.—We are told that in Homer's time the bridegroom wooed the bride with rich gifts. Iphidamas, for instance, offered a hundred heifers and a thousand goats as a nuptial present.

The exchange of gifts would naturally have come into courtship at a very early time. The presenting of gifts is one of the simplest and surest methods of winning favour.

In primitive culture the gift meant a great deal more than it does to us to-day. The primitive man or woman felt that part of himself or herself was being presented.

Among the Khakyens even now there seems to be little more of a marriage ceremony than the interchange of presents. And in Japan, the sending of presents to the bride by the groom is one of the most important parts of the marriage ceremony. When the gifts have been received and accepted, the contract is considered complete and neither party can draw back.

As we follow the development of gift-making in courtship, we find that a certain romance centres around the flower. A Timorese woman, even to-day, bestows the highest mark of attachment upon her lover when she gives him the flower garland from her hair. Among the Polynesians, men and women alike wear flowers behind their ears when they are in love. The flower is, as a rule, the gift of the lover.

It was an ancient betrothal custom among various peoples, conspicuously among them the Greeks, to wear a flower as an external and conspicuous mark of the engagement. The full-blown flower suggested love awakened, and it was with the flower that lovers in early days exchanged their engagement vows. A short-lived emblem indeed with which to plight a life-long love!

But there have been many other favourite courtship gifts beside flowers. The custom of giving a bit of jewellery or something decorative to wear probably originated in the myth that whoever wore the magic girdle of Aphrodite became the object of great love. And the custom of the young woman making something for her betrothed to wear probably had its origin in the old Scandinavian tradition that for a wedding to be happy, the bride must make with her own hands the groom's bridal shirt.

Everyone knows that the teacup is "quite the thing" to give to an engaged girl. But why?

Tradition tells us that a lover, who was on one occasion

obliged to go away on an extended sea journey, gave to his betrothed a delicate china cup, asking her to drink tea from it every afternoon at a certain hour. He said, "If I am unfaithful, the cup will fill to overbrimming and the tea pouring over the sides will crack the thin china. Then you will know I have broken faith."

Origin and Development of the Kiss.—Kissing as a form of affection did not develop until comparatively late. But we know that kissing as a form of obeisance existed in the most primitive times. In many African tribes the natives kiss the ground over which a chief has trod. In Australia kissing the ground, or rather breathing upon it, is a form of greeting among various peoples. Kissing the hand and the foot has been a mark of respect and homage from the earliest times.

Havelock Ellis, in his "Psychology of Sex," says:

Manifestations resembling the kiss are found among various animals lower than man. Snails caress antennæ. Birds use their bills for a kind of caress. The dog who "licks" his master is really kissing him.

As primitive man paralleled the lower animals in so many things, it is very possible that the primitive mother kissed her child, in the sense of fondling it. But we cannot trace the kiss as a form of affection in antiquity in any sort of pronounced manner.

Lombroso tells us that kissing is a Caucasian habit and that Orientals are strangers to it. He says its origin is to be found undoubtedly in the maternal caresses. Out of these maternal caresses grew the kiss of feeling and reverence as we know it to-day.

The Samoan kiss is a sniff. The Polynesians show affection by rubbing noses together—as do the Laplanders and the Eskimo. Neither the Chinese nor the Japanese kiss. It is only in America and Europe that the kiss is practised to any great degree—although in time the moving pictures will probably introduce the custom to many other people!

Following the development of the kiss—and it developed very rapidly among Aryan and Semitic people—

Though the kiss in love and courtship is more modern than most of us suspect, the affectionate caress traces its origin back to the earliest times when the primitive mother fondled her infant as any mother does to-day.

we find that "kissing the mouth or the eyes as a form of dignified greeting was practised among the early Romans."

Mention of the kiss is found also in the memoirs of Pomponius, who suffered his lips to be kissed by worthy and deserving nobles, his hands by less worthy nobles, his feet by the least worthy nobles.

We learn from Erasmus that when he visited England he found kissing in use as a form of greeting everywhere. When a visitor entered a house he kissed his host and hostess, all their children, and even the dog and cat!

One of the first definite instances of kissing as a form of love and affection is noted by Leybard, the famous saint of Tours in the 6th century, who gave his betrothed "a ring, a kiss and a pair of shoes"—the latter being a sign of his great subjection to her. The ring was to bind them both together. The kiss, evidently, was the seal of affection.

Of course, the kiss as a form of affection may have existed very much earlier than the 6th century. We don't like to believe, somehow, that Cleopatra knew nothing at all about it. Yet we have no definite records other than those that are quoted here.

In France the kiss developed very rapidly and quickly found a permanent place for itself in courtship and love. Montaigne tells us that in France any Jack with three lackeys was privileged to kiss almost any woman he pleased. When dancing became popular, almost every dance figure ended with a kiss. According to one writer, Louis XII is credited with having kissed every woman in Normandy.

From France the kiss spread quickly all over Europe. In Russia we are told it reached the proportions of an epidemic. A kiss from the Tsar became one of the highest forms of official recognition.

The development of the kiss as a form of homage in royal circles and among the nobility of various countries is fascinating. But the subject has no place here. We are concerned solely with the kiss as it relates to courtship.

Like the flower of an earlier civilization, the kiss in courtship became the "seal with which lovers plight their

troth." It became also an important feature of the marriage ceremonial and is now firmly established as a symbol of hope and love and tenderness. As such we interpret it in courtship and in marriage.

THE ENGAGEMENT RING

"It is the custom to seal the engagement pact with a ring," says "The Book of Etiquette."

What a world of romance and tradition lurks behind that simple sentence! We could not possibly tell all the fascinating tales that concern the engagement ring and its development through long ages of courtship and marriage, but we shall try to give you the most important and outstanding facts.

The ring as a pledge can be traced back to great antiquity.

And Pharaoh said unto Joseph, See I have set thee over all the land of Egypt. And Pharaoh took off his ring from his hand, and put it upon Joseph's hand. (Genesis XLI, 41, 42.)

Similar use of signet rings as symbols of respect and authority is mentioned in several parts of the sacred narrative. It would appear that rings were commonly worn by persons of rank at that period, and that they were bestowed upon others either as gifts or for the purpose of transferring authority.

Of course, we know that rings as ornaments were worn in early Egypt, in Greece, and even among savage peoples. But whether or not they served any definite purpose other than ornamentation, we do not know and cannot say.

A wealth of folklore and mythology surrounds the ring. Nizami, the famous Persian poet who died in 1209, tells this story: A hot vapour once rent the ground and in the chasm was discovered a horse of tin and copper. There was a large fissure in its side. Passing by the place, a shepherd saw the horse and discovered in the fissure the body of an old man, fast asleep, with a gold ring on his

*The pledge of love. Sealing the engagement pact with a ring, in
15th Century England.*

finger. He took it and went the following morning to his master to learn its value. During the visit he discovered that when he turned the seal toward the palm of his hand he became invisible. Determining to make use of this great power, he proceeded to the palace, secretly entered the council chamber, and remained unseen during a long council. When the nobles left, he revealed himself to the king and proclaimed himself a prophet. The king at once took him as his minister, and eventually the shepherd succeeded him on the throne.

But let us forget the fascinating folklore that surrounds the ring and study the development of the engagement ring as we know it to-day.

Development of the Engagement Ring.—It was anciently the custom among people of the lower classes to break a piece of gold or silver to seal the marriage pact. One half of the token was kept by the man, the other half by the woman. This custom came before the exchange of rings.

The custom of "breaking gold" is mentioned in an old play called "The Widow," an extract from which is to be found in Strutt's "Manners and Customs." In this play the widow complains that Ricardo has artfully drawn her into a verbal contract. One of her suitors says:

"Stay, stay—you broke no gold between you?"

"We broke nothing, sir," she answered.

"Nor drank to each other?"

"Not a drop."

Upon which the young man declares that "the contract cannot stand good in law."

Even prior to the breaking of gold, we can understand how lovers must have exchanged tokens of some sort. It would have seemed to them the logical way to prove their love. The man particularly would be eager to present the woman with a gift of some sort, because in primitive culture the gift is part of the person and by accepting it the woman acknowledged her acceptance of the man.

In ancient Ireland, for instance, it was the custom for the man to give the woman he wanted to marry a bracelet woven of human hair. Her acceptance of it was symbolic of accepting the man, of linking herself to him for life. In Halmahera and Borneo the proposal is made by offering betel to the girl. She shows her acceptance of the proposal by accepting the betel. (See p. 323.)

It appears that the ring as a love pledge existed at a very early period. We find many references to it in literature and in history.

Philip de Comines relates in his "Memoirs" that a diamond ring of great value was sent as a pledge or token by the Princess of Burgundy to the Duke of Austria (1477). This ring signified her consent to the alliance, arranged by her father. We see here two old customs: the first, betrothal by the father; the second, sealing of the engagement pact by exchange of rings.

It was quite a customary thing, in the early Middle Ages, for solemn betrothal by means of ring to precede matrimony. In England "rings were exchanged to seal the verbal contract of betrothal." In Italy the use of the ring was widespread, and the diamond was the favourite gem.

In an old play called "The Dutche Courtezan" a pair of lovers are introduced plighting their troth. Beatrice says to Freeville, "I give you faith; wear this slight favour in my remembrance." The "slight favour" is a rich and costly ring.

Codrington, in "Youth's Behaviour" (1664), says: "Rings and ribbands are but trifles, but believe me, they are not trifles that are aimed at in such exchanges; let them therefore be counselled that they neither give nor receive anything that afterwards may procure their shame." He is referring, of course, to young women who accept gifts of "rings and ribbands" from men.

The joint ring seems to have been a common token of love between betrothed people. We gather, from the

following passage in Dryden's play, "Don Sebastian" (1690), that rings of this sort were by no means confined to the lower classes, but were exquisitely and expensively made for the wealthy classes:

A curious artist wrought 'em
 With joynts so close as not to be perceiv'd;
 Yet are they both each other's counterpart.
 (Her part had *Juan* inscribed, and his had *Zayda*.
 You know whose names were their's) and in the midst,
 A heart divided in two halves was placed.
 Now if the rivets of those two rings, inclos'd,
 Fit into each other, I have forged this lye;
 But if they join, you must forever part.

The famous Jummal ring (known also as the gemmel-ring) is mentioned by Herrick in his "Hesperides." The Jummal ring was curiously made in two parts linked together, a sort of joint ring like that mentioned above.

Thou sent'st me a true-love knot; but I
 Returned a ring of jummals to imply
 Thy love had one knot, mine a triple-tye.

This quotation seems to indicate that the Jummal ring sometimes had more than two links and was more of a "true-love token" than an engagement ring.

A curious old custom still prevails in Guernsey, although it is no longer as widespread and common as it was in the 18th and 19th centuries. When a young man offers himself to a young lady and is accepted, the parents of both parties give what is termed a "flouncing." All their friends are invited and a great feast is prepared. The young lady is led around the room by her future father-in-law, the young man by his future father-in-law, and they are introduced to all the friends and relatives of the opposite families. Rings are then exchanged publicly and the couple is considered betrothed. This ceremony is almost as binding as actual marriage, and once the rings are exchanged, the thing is done! They are as good as man and wife.

The "Hand-fest."—Among the early Danes there ex-

isted a curious kind of marriage-contract known as *hand-festing*. Strong traces of it still remain.

According to this *hand-fest* it was customary and entirely correct for unmarried persons of both sexes to choose a companion and live together for one year. If they were pleased with one another at the end of the year, they remained together for life; if not, they separated and were free to make another choice.

We find traces of a custom very similar to this in England in the 17th century and in Scotland in the 17th and 18th centuries. It is known as "hand-fasting" or hand-in-fist. At the beginning of the period there is a "mutual interchangement of rings," and at the end the period, if they do not wish to remain together they return the rings, separate, and seek another companion. This custom appears to have been quite common during the reign of Queen Elizabeth. It was also a widespread custom, during her reign, for women to give their lovers tiny lace handkerchiefs (about three inches square) which they wore in their cuffs or hats.

The Custom of the Diamond.—In modern times the diamond is the favourite gem for the engagement ring. Indeed, one thinks only of the diamond in connection with rings of betrothal. There is a reason for this.

According to an old superstition, the origin of which is unknown, the sparkle of the diamond is supposed to have originated in the fires of love. Therefore the diamond engagement ring is considered by superstitious persons the only *true* engagement ring, portending love and happiness throughout life.

The diamond was particularly esteemed in Italy in mediæval times and was the favourite stone for setting in engagement rings. It was called *pietra della reconciliazione* because of its supposed power to maintain concord between man and wife.

To-day the etiquette books say, "The convention is that the ring be a diamond solitaire set in gold or platinum,

or, if it is preferred, a diamond set with other stones." As always, custom prevails.

HOPE CHESTS AND BRIDAL SHOWERS

The "hope chest" must certainly have grown out of the old, old custom of the dowry.

The dowry itself grew out of the custom of marriage by purchase, which shall be discussed later in detail. It represents an indirect way of compensating the bridegroom. The dowry in early life was intended entirely as a reward or return for the bride-price paid to the parents.

Of course, the nearer we come to the touch of higher civilization, the more the original purpose of customs such as these fades into the background. To-day the hope chest is simply a relic of other days, retained because it is a pretty and convenient custom and because of the ages of tradition that lurk in its depth.

There is, for instance, the tradition that to make every bit of finery and household linen that goes into the hope chest is to earn everlasting happiness for one's self. We can see how a superstition such as this would have been born among thrifty mothers who told the tale to their daughters, who in turn handed it down to their own daughters, and they to their daughters after them, so that the superstition has survived and still can be found among various European peoples. In Roumania, to give one instance, even the tiniest girls, some of them as young as five years, are to be seen working on their bridal finery, each one striving to outdo the other in beauty and elaboration of work. Each finished article is laid carefully away in a huge chest until such time as a suitor appears.

Wardrobes in which to hang clothes came at a comparatively late period. Chests were used to store away household linens and wearing apparel, and each household had its collection of chests. In most homes there would be one chest set aside for the daughter, and into this chest would be placed the bits of finery and the hand-made linens

which were to go into "the home of her hopes." Can't you see the origin of the name "hope chest"?

Origin of the Bridal Shower.—The bridal shower is one of the prettiest customs that has been brought down to us through the centuries. It is a charming way for friends and acquaintances to present gifts that would seem too trifling if they were presented individually.

Many, many years ago in Holland a beautiful girl gave her heart to a miller—a young fellow who hadn't much in worldly goods but whom everyone loved because of his kindness. He was poor because he gave his bread and his flour to the needy.

The girl's father forbade the marriage and told his daughter that she could not have the dowry he had placed aside for her if she married the poor miller. He had selected what he considered a satisfactory husband for her—a man who owned a farm and a hundred pigs!

The people to whom the miller had given bread heard the story and were sorry. They got together and talked the matter over. Too bad the beautiful girl would lose her dowry. Couldn't they do something about it? They didn't have much money, but each one thought of a gift he or she could contribute so that the miller and the beautiful girl could marry and have their own home.

And they came to the girl in a gay procession: one with an old Dutch vase; one with plates for the kitchen shelves; one with linens made on the hand loom at home; one with a shiny new pot. They showered her with their gifts and gave her a finer dowry than her father ever could! Many brides-to-be to-day must be grateful to the little Dutch maiden whose "shower" set such a happy precedent.

A good many years later, an Englishwoman heard of a friend who was about to be married and decided that the only gift she could afford was too slight an offering to express the good wishes that she felt. Remembering the story of the Dutch "shower," and knowing that there were other friends who felt the same way as she did, she called them together and suggested that they present their

gifts at the same time. The "shower" which they gave was so successful and caused so much comment in fashionable circles that it became definitely established as a social custom, and has remained ever since.

Kinds of Showers.—There was a time, not so very long ago, when the linen shower was considered the most correct and appropriate type of shower to give the engaged girl. Young people who planned to "shower" their

Origin of the bridal shower—Holland.

bride-to-be friend contributed each an article of linen for the new home. But to-day there is a great variety of showers, and the clever hostess always selects one that is novel and interesting.

The book shower is quite new, and a great favorite of the moment. Everything may be included, from the Bible to the best-seller. The hostess of the shower may supply the book case, if she likes, or a pretty little book rack. The guests supply the books. It is a wise thing to compare notes beforehand, so that no books are duplicated.

The kitchen shower is always good. Gifts may consist of chinaware, kitchen tableware or woodenware. The aluminum shower appears to be very popular, but one should ascertain first whether or not the bride-to-be wants aluminum in her kitchen.

The radio shower is the "last word," of course; but one should not give a radio shower unless one is quite positive that both bride and groom are radio "fans." In this case the shower guests as a rule pool their money and purchase the complete radio set which they present *en masse*.

The shower can be made a delightful social function. Only intimate friends of the bride should be invited, and the affair should be informal in character. Of course, it is always more interesting if the shower is a complete surprise to the bride.

THE PERIOD OF THE ENGAGEMENT

All writers on etiquette seem to be agreed that "there is no time when the rules of etiquette need to be so strictly observed as during the period of courtship." This thought is clearly paralleled in primitive culture.

Among the Afghan tribes, the greatest reserve is maintained between men and women who are to be married. No man may even see or speak to his promised wife from the time of betrothal until marriage. Strangely enough this same custom exists among the warlike Eusofyzes.

In Russia, it was at one time considered a great disgrace for a man to propose directly to a lady. Between the day of settling the dowry with the parents and the exact day of marriage, he was strictly forbidden to see his betrothed or even venture near the house.

To parallel this in modern life, right here in the United States, you know that it is still considered good form for a young man to obtain the formal consent of the young lady's parents before asking her hand in marriage. It isn't always done, of course, but the custom exists, never-

theless. And you know that it is an old, old custom for the bridegroom to be forbidden the house of the bride on the day of the wedding. A superstition exists to the effect that if the bride permits herself to be seen by the groom on the day of the wedding, before the actual time of ceremony, the wedding will not be quite as happy as she had hoped.

Etiquette is harsh in Greece. Rings for betrothal are exchanged in the priest's presence, and the engagement may then not be broken without the consent of the priest. Following the betrothal, the engaged couple may not see each other or talk to each other until the day of the wedding.

We find traces of similar customs in various countries and among various peoples. It would appear that customs such as these grew out of the fear of the bride's parents or people of being cheated of her bride-price if she decided to elope with her betrothed before the day set for the wedding, although in many instances it was necessary to pay the bride-price even before the wedding day was set. It is curious that even courtship, and customs concerning courtship, should still be linked in so many ways to the primitive level.

Announcing the Engagement.—When a suitor is accepted there follows the necessity of announcing the betrothal to the friends and acquaintances of both families. Customs of announcing the betrothal have varied among different peoples and in different periods.

In primitive life the occasion was one of great festivity and celebration. The families came together and ate and drank, which was the universal way of indicating kinship. The very act of eating together appears to have been symbolic of the binding together of both families. Thus, among certain peoples, the contract was not considered binding until a feast had been given and both families had eaten together.

In modern life, it is customary to celebrate the engagement with a dinner party or an engagement supper.

The original purpose is forgotten, but the custom remains.

We are told that in early Rome the contract of marriage was sealed with an iron ring, and the contracting parties drank together. Drinking together appears to have been a common and widespread custom in Europe. We find frequent allusion to it in literature. For instance, in Middleton's play, "No Wit Like a Woman's" we discover this line:

Ev'n when my lips touch'd the *contracting* cup.

Reference has already been made to the play called "The Widow" (See p. 189), in which the suitor asks: "Nor drank to each other?" Because there was no drinking together and no exchange of rings he holds that the contract will not stand good in law and that she is therefore free to marry him.

Park, in his "Travels in the Interior of Africa," tells us of the following betrothal custom:

At Baniseribe, a Slattee having seated himself upon a mat at the threshold of his door, a young woman (his intended bride) brought a little water in a calabash, and kneeling down before him, desired him to wash his hands. When he had done this, the girl, with a tear of joy sparkling in her eye, drank the water; this being considered as the greatest proof of her fidelity and love.

This custom is simply a primitive method of publicly announcing a betrothal. It existed among various North American Indian tribes, as well as among many tribes in Central Africa. The washing of the hands in the water was, in early days, symbolic of placing the taste of the man's strength in the water, since his strength was believed to be in his hands. The woman, drinking the water, *tasted the strength* of the man she was to marry. Variations of this custom are found among many widely separated peoples.

A curious custom existed in England in the 18th and early 19th centuries. During that period it was a popular thing to cry out "Halves!" on seeing a person pick up anything he had found. This exclamation entitled the

person to one-half of the find. The custom still exists to a certain extent, and is particularly prevalent in England among young boys.

Out of this grew the custom of publicly announcing a betrothal to which the parents of the young people objected. A youth would drop a ring before the girl he wished to marry. She, conspirator that she was, would cry "Halves!" and be given one-half of the ring. This, you remember, was an ancient custom practised before the exchange of engagement rings. A bit of gold was broken and the man kept one part while the woman kept the other.

Now, each holding half of the ring, the young man and woman would attract the attention of passers-by and call upon them to witness the fact that they were now betrothed and that the token sealed their betrothal vows. They would then parade to the home of the young woman, the gay crowd behind them, and announce what had happened. Under the circumstances the families usually acquiesced, and the marriage followed.

As a popular fad, the custom existed for more than a century but gradually fell into disuse and is to-day entirely obsolete.

It is a modern custom to give the news of the engagement as nearly the appearance of "leaking out" as possible. This may be a survival of the custom, among early peoples, of keeping the engagement or betrothal quiet as long as possible, so as still to receive offers from other suitors and select at last the offer of the highest bidder. Thus news of a betrothal was not made known until all details concerning bride-price and date of marriage were finally settled and agreed upon.

To-day the betrothal is very rarely announced until the young people are at least approximately aware of the time when the marriage will take place. The accepted way of announcing the engagement is to invite a small number of intimate friends to a dinner party and have the news im-

parted to them for the first time during the course of conversation. The announcement is usually made by one or other of the young woman's parents, or by her nearest relative.

There are other accepted modes of announcing the engagement. Cards may be sent to friends and acquaintances; informal letters may be sent to the family friends by the bride's parents; public announcements may be made in the columns of the local newspapers; the word may be whispered to a gossiping friend who can be trusted to carry the news.

COURTSHIP IN YOUNG AMERICA

One of the most romantic pages in the history of courtship belongs to that period when the young colonies in the New World were struggling with life and gaining their first foothold on freedom. The courtship among the men and women who had left their native lands, who had crossed an ocean to found new homes and a new mode of life, must have been a beautiful and inspiring courtship indeed.

In a land of unbroken forests, in a strange new country with just a handful of white people among hosts of Indians, what safety had an unmarried woman? And what chance for comfort had an unmarried man? We can understand why they married young, and why their marriages were tinged with a certain solemn significance. They not only joined their lives in love, but also in the pledge to find freedom, happiness, and prosperity in the infant civilization they were founding. "The Courtship of Miles Standish" gives us an excellent picture of life and love and courtship in the days of our country's beginning.

Many Old-World customs came across the ocean in the *Mayflower*. The Puritans were able to cut themselves adrift from the motherland, but they were not able to cut loose the age-old moorings that bound them to the customs and traditions of their ancestors.

In the first years of the colonies, there existed a formal ceremony of betrothal very similar to that which we find in England at the corresponding period. In Plymouth this ceremony was known as the "pre-contract." There was no merrymaking—the business of living was too vital for that—but banns or bulletins were published and the betrothal made known to all. The young people were presented with gifts and a home was built for them. After the marriage—and it usually followed quickly upon the heels of the betrothal—the governor allotted a certain amount of grain and corn to the couple.

The old custom of seizing a girl's gloves and demanding a kiss as a forfeit appears to have been practised in early New England. Alice Morse Earle, in her delightful book, "Customs and Fashions in Old New England," gives an account of the amusing love affair between Sarah Tuttle and Jacob Murline. She tells us that "Jacob Murline entered and, seizing Sarah's gloves, demanded the centuries-old forfeit of a kiss."

From the pages of Judge Sewell's diary we learn many amusing and interesting things concerning courtship in those early days. In his early widowhood, the Judge courted the widow Winthrop. On one occasion he succeeded in removing her gloves and holding her hand, which he conceives as a great triumph. His entry in his diary follows:

I asked her to Acquit me of Rudeness if I drew off her Glove. Enquiring the reason I told her 'twas great odds between handling a dead Goat and a Living Lady. Got it off. . . .

Later we learn that the Judge's interest in the widow Winthrop lagged and he

fluctuated to a new widow, Madam Harris, who gave him a "nutmeg as it grew," ever a true lover's gift in Shakespeare's day.

Most amusing are these sidelights on courtship! Yet even as they amuse they give us a clear and definite insight into the manners and customs of the people of that time.

The "matrimonial" advertisement appeared for the first time in the New World in 1759. We can imagine what a

fluttering of hearts this notice must have caused among the eligible young ladies—and among those not so young and not so eligible! It appeared in the *Boston Evening Post* of February 23, the forerunner of many more of its kind:

TO THE LADIES: Any young Lady between the Age of Eighteen and Twenty-three, of a Midling Stature; brown Hair, regular Features and a Lively Brisk Eye; of Good Morals and not Tinctured with anything that may Sully so Distinguishable a Form; possessed of three or four hundred pounds entirely her own Disposal, and where there will be no necessity of Going Through the tiresome Talk of addressing Parents or Guardians for their Consent: Such a one by leaving a Line directed for A. W. at the British Coffee House in King Street appointing where an Interview may be had will meet a Person who flatters himself he shall not be thought Disagreeable by any Lady answering the above description. N. B. Profound Secrecy will be observed. No Trifling Answers will be regarded.

We have no record of the success of this early advertising writer; but we know that vast numbers of matrimonial advertisements promptly made their appearance after this one. But though the manner of courtship took on many strange new twists, the age-old customs and traditions were never forgotten, and are not forgotten to-day.

A groom in ancient England, breaking a bit of gold; peasantry in Holland planning a dowry for their favourite daughter; lovers plighting their troth with a flower—these are the age-old traditions and customs that have been handed down to us from one generation to another and that blend with the modern order of things, adding a touch of old romance to the new.

CHAPTER VIII

MARRIAGE CUSTOMS

Life to-day, no less than in the past, is made brighter for the Cave-man by examples of symbolization that we scarcely recognize as such. These acts satisfy our unconscious desires for primitive expression, often without the least conscious inkling of their real underlying significances. For instance, we throw rice and old shoes at newlyweds without comprehending the true meaning of the act. Consciously we are following an established custom, but unconsciously we are doing something more important. We are giving expression in a symbolical way to a wish that is quite appropriate for the occasion, but which our conventional ethics would not permit us to express in a more direct way.

—WILLIAM J. FIELDING.

THE ANTIQUITY OF HUMAN MARRIAGE

MARRIAGE is one of the oldest and most sacred of human institutions. It emerges from the long shadow of prehistory and silhouettes itself against the blackness of savage life like a sun in a cloud-shrouded sky.

Writers of authority, such as Bachofen, Morgan, Lubbock, McLennan, Bastian, Wilken, and others, are of the opinion that man lived at first in a state of promiscuity. That is, the earliest men and women had no bond to unite them except the fact that they lived together. They had no higher marriage sense than the animals.

On the other hand, Westermarck, whose "History of Human Marriage" is one of the finest discussions ever written on this subject, declares that there is not a shred of genuine evidence to prove that simple promiscuity ever prevailed. There was, of course, a time when there was no man-made marriage ceremony; but in the actual union of man and woman in early life there was latent the idea of marriage.

We are inclined to believe that men, from the very first,

were on a higher plane than the animals, and that marriage in its truer sense has existed since the very beginning of time. Its origin seems to us coeval with the origin of man, and its development follows in the footsteps of man's development.

But marriage in the sense of binding together by man-made law or ceremony is another thing. This marriage grew out of external conditions, and was precipitated by certain very definite circumstances influencing the daily life of man.

Early Sexual Relations.—We cannot attempt to discuss at any great length the sexual relations of mankind at the remote period of life's beginning. Nothing very definite is known; we can only theorize and conjecture, as so many have done before us. Yet the earliest relations of men and women had so tremendous an influence upon the later habits and customs of life that we dare not leave the subject untouched.

In the very earliest times, if promiscuity existed at all, it probably did not exist for any very great length of time. We know that it never formed a general stage in the social history of mankind. It could not have been a common or general state, for reasons which will presently be set forth.

From what is known of the jealousy of all male quadrupeds in matters relating to sex, it is very unlikely that early man would have been satisfied to share his woman with other men. He would have preferred to live with one woman who belonged to him alone, than to live promiscuously and share his women.

According to the famous old Thlinket myth, the jealousy of man is older than the world itself. This myth tells us that there was an age when men groped in the dark searching for the world. They knew it existed, but they did not know where it was or how to find it. During this age a Thlinket lived with his wife and sister; and he was so insanely jealous of his wife that he killed all his sister's children because they dared to look at her.

But even jealousy could not have played so large a part in sexual relations as the natural attraction of one certain woman for one man. As Westermarck says, "I am strongly of opinion that the tie which joins male and female is an instinct developed through the powerful influence of natural selection." This influence undoubtedly played a large part in establishing monogamy.

At this point it may be useful to define certain terms that will be used constantly throughout this chapter.

Monogamy means the marriage of one man to one woman, marriage as it exists in modern civilized life.

Polygamy means one man but several women in the marriage union—in other words, more than one wife.

Polyandry is the exact opposite—several men but only one woman.

Exogamy relates to the law prohibiting marriage between persons of the same blood or stock as incest.

Endogamy is the opposite law, prohibiting marriage with any persons except those of the same blood or stock.

It is interesting to note how various existing conditions in widely separated parts of the globe induced habits of life. For instance, where there was a scarcity of women, polyandry flourished. Where there were many more women than men, polygamy was the custom.

Why Man Became Monogamous.—Man appears originally to have practised polygamy. If he saw a woman he wanted, he took her. Possibly three or four women lived with one man at one time. The woman was a captive before she was a wife.

But while this may have been the state of existence among various wandering tribes or even among a great body of people, it is easy to see why polygamy could not have survived as a universal and general thing. In the first place, conditions all over the world—the world of that time—were not the same. Some peoples practised infanticide, killing chiefly the female infants. This resulted in a scarcity of women. Among other savage peoples, constantly at war with each other, there would be a scarcity of men in proportion to the women.

This disproportion between sexes would lead at first to polygamy or polyandry, according to the direction in which the pendulum swung. But later it would tend to turn man toward monogamy. The woman would try to hold the affections of one man so as to be assured of his protection and a constant supply of food. This would give her an advantage in a community where men were scarce. Taking the opposite angle, the man would want to be assured of at least one woman whom he would not have to share, in a community where women were scarce. Thus would evolve the idea of one woman for one man, one man for one woman.

However, there seems to be no doubt that the child was the greatest impetus toward monogamy. As Andrew Lang indicates, "The family is the most sacred of human institutions." Among many savage peoples even to-day the marriage is not solemnized until the first child is born, and if no child is born the man is at perfect liberty to leave the woman.

Even among the lower animals the natural instinct to protect the young and supply food for the subsistence of the young is strong. In primitive life it must have been the tie which bound man to one cave, one woman, one home.

In the first flush of passion, let us suppose, man found a home for himself where he would be safe with his woman—where no stronger fellow would be able to steal her from him. He probably discovered a cave for himself, advantageously situated on a hill or in a grotto; and here he would bring his bride. He would roll a stone against the entrance at night to keep out wild beasts. He would contrive in various crude ways to make his little home a stronghold, entirely protected from invasion by either man or beast.

To this home the man would return after the hunt, knowing that he would find his woman safe, and that he himself would be in safety. Here, probably, a child or two would be born, and the man would begin to find pleasure

in coming home to those who waited for him eagerly. He would bring queer shells for the young to play with, food for the woman to cook, ornaments for himself. And he would be happy.

So potent is habit, that the man would not think of wandering off in search of another woman—would not dream of leaving the little stronghold he had built, the home he had come to know and depend upon. Thus the family would become an important factor in his life—and monogamy would enter the social life of even the most primitive peoples.

Morality enters into a discussion of the sexual relations, although in a minor sense. We have already discovered the high morality that existed among primitive men (see p. 169). There are numerous people to-day, whom we would consider otherwise savage and barbarous, among whom intercourse out of wedlock is rare and unchastity on the part of either man or woman looked upon as a disgrace and even a crime.

Morality may have had a little to do with the ultimate establishing of monogamy; but we doubt whether it actually helped induce it. Selfishness and jealousy; the fear of being forced to fight to keep three or four wives when another fellow hadn't any; disproportion between the sexes; perhaps even scarcity of food; most certainly the powerful influence of natural selection; and finally the child and the family—these are the outstanding causes that led to monogamy.

As we proceed with the study of marriage in all its many phases you will recognize certain other factors which helped to strengthen monogamy in the march through time.

The Ceremonious Aspect of Marriage.—We can understand why man came to celebrate marriage and make of it a ceremony. It was a change from one mode of life to another. It was the throwing aside of childhood and of sexlessness. To the primitive mind it was one of the most important changes in life, and it was dramatized accord-

ingly. Later, in tribal life, marriage was the breaking down of the sexual tabu (see p. 166), and grave, solemn rites were considered essential to appease the tribal deities.

Few peoples are known to us who are without marriage ceremonies of some sort. Ever eager to pantomime, to play at make-believe, to express the hopes and joys and passions that surged through him, primitive man made of marriage a ceremony and a celebration. There grew up in various places, among widely separated peoples, customs of celebrating marriage, some strangely similar, some exactly opposite, in nature, some weird and barbarous. Nevertheless, they were ceremonies, and many of them have contributed, as we shall see, to our own 20th-century marriage customs.

As marriage ceremonies arose by degrees in various ways, it was inevitable that an element of religion should enter into them. The linking together of two lives, the mating of a man and a woman, was undoubtedly regarded as a matter of importance; and it was natural that a religious character should be given to the ceremonies in the sense of invoking help for the future union.

Among many savage peoples, the marriage was not considered solemnized until certain ceremonial tribal rites had been performed. We are told that among primitive Aryans certain religious ceremonies were required before the marriage was considered valid. The Greek and Catholic churches made marriage a sacrament. And through the ages, marriage has never lost its religious, ceremonious aspect.

The Three Great Stages of Marriage.—Marriage seems to have passed through three great stages of development. Each of these stages has contributed its share to the customs of modern marriage; therefore a glance at them will be helpful.

The first great stage, of course, was marriage through force. Some writers refer to it as a form of "glorified rape," but it was really a form of marriage. When primi-

tive man stole a woman, he stole her, more often than not, because he wanted a wife.

Marriage through contract or purchase followed marriage by capture. The transition from the first stage to the second was probably brought about in this way: The tribe felt it was a duty to avenge the woman stolen from them. They marched against the tribe which held the woman captive, and that tribe, to avoid too great damage, offered compensation. Out of this grew the idea of offering compensation beforehand—in other words, buying the bride.

The next great stage is marriage through mutual love. That love entered marriage at an early stage we know, because of the wealth of tradition and lovelore that has come down to us. But it did not come until both marriage by capture and marriage by purchase had run their course. And even then, traces of both these two great stages lingered—and linger to-day—in the customs of those who marry through love.

"Giving the bride away" in the modern marriage ceremony is a relic of the time when the bride was really sold. The bride's veil is a reminder of days when she was actually shrouded from head to foot. The "best man" suggests the strong-armed warrior who assisted the would-be bridegroom to carry off his bride. The honeymoon itself symbolizes the period during which the bridegroom was forced to hide with his prize until her kinsmen grew tired of searching for her.

So do customs manifest themselves even after they have been thrown aside. Once a custom has been definitely established it will never, as Keats would say "pass into nothingness."

Marriage by Capture.—In primitive culture, groups of people were almost habitually hostile. Herbert Spencer, in his "Principles of Sociology," tells us that in all times and places, victory in warfare was followed by pillage. The conquerors took whatever portable things they could find, and women were taken along with other booty.

We can understand why the women were taken. Primitive man undoubtedly preferred a captured wife because she had the added value of being a trophy. She attested to his prowess in warfare, to his strength and courage in carrying her off. Throughout primitive life we find that members of the tribe who are married to captive women are considered more honourably married than those who have taken wives from within the tribe.

But no system of marriage as widespread as that of capture could have grown out of the simple desire to possess that which belonged to someone else. Many conditions induced marriage by capture as a system for obtaining wives.

In the first place, there are the rules or laws of exogamy which are found everywhere among primitive peoples. We find the horror of incest even among the most savage and barbarous tribes. Somehow, even the earliest people, who reasoned no more than was necessary in daily life, had the feeling that to intermarry with kin, between persons of the same blood or stock, was indecent and shameful.

Thus men sought their wives outside the tribe. The system of marriage by capture was actually forced upon them. Since marriage with the woman of the clan or the tribe was prohibited, they were obliged to seek wives elsewhere.

Nor was this arrangement entirely unsatisfactory to the women. In early tribal life, the man who captured a woman belonging to another tribe assumed individual and exclusive right to her. She was his property. He provided her with food, shelter, and protection, and no one else in the tribe—with the possible exception of the chief—had any right to her. The women who belonged to the tribe, however, were in many cases subject to the attentions of all their tribesmen. Their position was therefore comparatively insecure. Envy-ing the individual attentions bestowed upon the captured women, the women of the tribe often allowed themselves to stray away from the protection of their tribesmen and be captured by a man of some other tribe.

Disproportion of sexes also led to marriage by capture. Even before laws of exogamy existed, men belonging to tribes that practised female infanticide would be induced—through lack of women within the tribe—to seek wives elsewhere, steal them from neighbouring hordes.

“The men of a group, since women were in the minority, must either have quarreled about their women and separated, splitting the horde into hostile sections, or indulged in savage promiscuity.” Many primitive battles must have been fought among peoples who had a scarcity of women. That divisions of tribes into two or more hostile sections occurred frequently cannot be doubted. And it cannot be doubted, either, that conditions such as this led to the habits that firmly established exogamy.

Another reason for the widespread system of marriage by capture is the innate desire to display courage on part of man. We can imagine a savage fellow dragging in his captive bride and displaying her with pride and boastfulness to his fellows. *He* captured her. *He* stole to the outskirts of the sleeping horde on the other side of the valley and stunned her with his club before she could make outcry. *He* dragged her home and she belonged to him. Naturally, the others admired and envied him, which was precisely what he wanted.

Marriage by capture existed almost everywhere in early life, and it still prevails in certain parts of the world. Among the Ahts, for instance, a man occasionally steals a wife from within his own tribe. Similar practice occurs, although no longer to any great extent, among the Maoris, on the islands of the Fiji group, in Samoa, New Guinea, the Indian Archipelago and among the Tartars of Central Asia.

All Carib tribes at one time captured their wives from other tribes. The Uaupes have never had any particular marriage ceremony—except that of always carrying away the girl by force—even though she and the parents are willing. In Tasmania the capture of women for wives was

widely prevalent. Traces of marriage by capture are found among the Laplanders, the Esthonians, and the Finns. In Tierra del Fuego it was at one time the custom for the young Fuegians to carry off women for wives as soon as they were able to procure or construct a canoe for the purpose. The Indians on the Amazon and the Orinoco sometimes captured their brides. Wherever we go we find traces of this once universal system of obtaining wives.

Several cases of marriage by capture are cited in the Bible. The tribe of Benjamin, for instance, procured wives for themselves by massacring the inhabitants of Jabez-Gilead and capturing four hundred of their virgins. At another time the Benjamites carried off women during a feast near Bethel. And of course everyone knows the story of the vanquishing of the Midianites by the Israelites and the carrying off of all the cattle, children, and women. (See Numbers XXXI, 7-9. Also See Deuteronomy XXI for full description of marriage by capture as practised among the Israelites.)

An old Irish poem, "Duan Eiranash," speaks of 300 women being carried off by the Picts from the Gaels. The latter, finding themselves thus deprived of their women, finally decided to ally themselves with the Irish.

Traces of marriage by capture remained among almost all peoples, even after the necessity for this form of marriage disappeared. Sometimes we find a form of symbolized marriage by capture in instances where the bride and her family are entirely satisfied to have the marriage take place.

Thus among the Araucanians, for instance, carrying off the bride by pretended violence is absolutely essential before the marriage is solemnized. Among the Mosquito Indians, after a wedding is arranged and the bride-price paid, the bridegroom carries off the bride and is followed by female relatives who stage a mock battle and pretend to rescue her. The couple finally escape to "go in hiding," which is merely another way of saying that they go on their honeymoon.

By Attilio Simonetti.

Among the Wakamba, marriage is entirely an affair of barter or purchase, but the bridegroom must pretend to carry off the bride. The same sort of custom prevails among various African and Australian tribes, and distinct traces of capture remain in their marriage ceremonials. Plutarch informs us ("Dionysius of Halicarnassus") that marriage by capture was once customary throughout ancient Greece and that the form was retained by the Spartans as an important symbol in the marriage ceremony. And we are told that even after Christianity had abolished marriage by capture, the Anglo-Saxons persisted in simulating the capture of the bride.

The symbol of capture as retained in later systems of marriage appears to be due to a primitive conception of modesty and delicacy. The screams, tears, and struggles of the bride among various peoples are known to be merely a part of the marriage routine; yet they are considered absolutely essential to show her bashfulness and modesty. In other words it is a prudish way of indicating that the marriage was forced upon the girl and that she is not entering it willingly.

We know, however, that in early times marriage was usually a change for the worse; and perhaps the girl, realizing this, resisted all the more.

Among the Arabs of Sinai, a girl until recently acquired permanent repute in proportion to her tears and her struggles of resistance on her marriage day. Among the Irish mountaineers, a marriage is considered quite a tame affair, and scarcely legal, unless the bride attempts to escape and the bridegroom overtakes and "captures" her. A custom in Cardiganshire, Wales, is for the relatives of the bride to seize her as she reaches the church door and ride off with her. The bridegroom and his party must follow in pursuit. Upon being overtaken, the bride is at once handed over to the groom and his party, and a very popular superstition is that whoever caught her is certain to be married within the year.

McLennan, in his "Primitive Marriage," gives many instances of symbolized capture existing among savage peoples to-day. He reports that on one occasion Major-General Campbell related that he

heard loud cries proceeding from a village close at hand. Fearing some quarrel, I rode to the spot and there I saw a man bearing away upon his back something enveloped in an ample covering of scarlet cloth; he was surrounded by twenty or thirty young fellows, and by them protected from the desperate attacks made upon them by a party of young women. On seeking an explanation of this novel scene, I was told that the man had just married, and his precious burden was his blooming bride, whom he was conveying to his own village. Her youthful friends (as it appears is the custom) were seeking to regain possession of her and hurled stones and bamboos at the head of the devoted bridegroom until he reached the confines of his own village.

As we shall presently see, marriage by capture has left some very definite traces in our own marriage customs. They have assumed, of course, an entirely playful character.

Marriage by Purchase.—There is scarcely a race which has not passed, at some time or other in its development, through a stage of marriage by purchase. A handsome daughter has always been a distinctly marketable product; and the primitive father appears to have been nothing loath to sell her to the highest bidder.

At first marriage by capture merged into marriage by purchase, and the two represented one system of marriage. In other words, the bride was first stolen and restitution was made later to escape the vengeance of her people. Thus among the Ahts when a man steals a wife, as he still occasionally does, a purchase arrangement usually follows. Among various other savage peoples the bride is stolen first and the bride-price paid later. It would appear, from this, that the custom of wife purchase originated in the desire to placate the enraged parents, and also to prevent warfare between tribes as has already been indicated (see p. 209).

Perhaps in the earliest stage of wife purchase an exchange was made instead of a bride-price being paid.

For instance, let us pretend that the bridegroom is overtaken by the enraged father. He is taken to the tribe of his captive bride and ordered to pay the bride-price. Unable to do so, he possibly offers to give his own sister, or horses, cattle, or land in exchange. In this way he is able, not only to regain his freedom and perhaps save his life, but to keep his bride as well. This kind of marriage by exchange is still prevalent among barbarous peoples. Some writers tell us it exists to some extent even among the Chinese and various Mohammedan tribes. And we know that it is an almost universal form of marriage contract in Australia.

But even more common than exchange is the custom of obtaining a wife by services rendered the father. This appears to have been one of the most prevalent of the elementary stages of marriage by purchase.

The custom of obtaining a wife by working for the father for a certain period was practised among uncivilized races of America, Africa, Asia, and the Indian Archipelago. The men who were unable to pay the bride-price served in the house or on the grounds of the father-in-law, and thus ultimately earned the bride.

Among many early peoples, brides were not bought, but valuable presents were given to the parents. In Japan it is, or was until recently, the custom of the man who wished to marry a certain young woman to send presents to her and to her parents. The type of gifts and their value is not left to the good will of the would-be groom, but is definitely stipulated, and often long negotiations take place before an agreement is reached. The sending of these presents forms an important part of the marriage ceremony. Once they have been received and accepted, the contract is considered complete and neither party may withdraw. Native books do not explain this custom, and the only way we can account for it is that it is a survival of the primitive custom of marriage by purchase.

But the most common compensation for a bride, in primi-

tive life, was property paid for her to her owner or owners. Her price varied according to her charms, her health, her rank, her condition as a virgin, a widow, etc. We are told that among certain peoples a widow brought only one-half the sum which the father or guardian of a maid usually demanded.

One of the most perfect systems of wife purchase existed among the Babylonians. Twice a year all girls of marriageable age were assembled in a space before the temple and offered for sale to the highest bidders, very much in the manner of our modern auction. (Herodotus, Book I, 196.) The handsomest girls brought large prices, and this money was turned over to the homely girls who had appeared at several "auctions" and could not be disposed of. The money was an attraction, of course, and thus every girl ultimately won a husband. So were human souls bartered while civilization was young!

The ancient Scandinavians believed that even the gods bought their wives. We find this thought prevalent throughout their mythology. Abduction without payment seems to have been prevalent, however. But the young people were obliged to remain in hiding until they were able to pay to the guardian or parent the customary bride-price or compensation.

In his "Curiosities of Popular Customs" William S. Walsh says:

Marriage by purchase was prevalent among the Anglo-Saxons at the time when Christianity first reached them. Every woman was under the care of some man who was termed her *mundbora*, or guardian; and no one could marry her without having paid a sum of money as a compensation to him. The father was the guardian of his unmarried daughters; the brother, if the father died, and the next to him, the nearest male relative. If, however, the female was friendless and alone, she found in the king her legal guardian.

The maid was estimated according to her rank in life. The first step in courtship, therefore, was to buy the consent of the *mundbora*; the lover was then admitted into the society of his mistress and allowed to claim her in due course as his wife. If, however, her personal charms or her disposition proved, on better acquaintance,

unsatisfactory to her suitor, and he failed to complete his bargain, he immediately became amenable to the law.

If a man ventured to marry without first having bought and paid for his wife, he was guilty of the crime of *mundbreach*, the consequences of which were both vexatious and disastrous. The husband in such a case possessed no legal authority over his wife; he was a husband, in fact, without a wife; he had no right to her property. By the same law a maiden and a widow were of separate value; the latter could be purchased for one half the sum that the guardian of a maid was entitled to demand; the man, therefore, who could not afford to purchase a maid might perhaps be able to purchase a widow.

We quote this bit of discussion concerning the Anglo-Saxon laws of wife purchase to show you how close to a trade marriage was at one time in our development. A trade in human lives, in human souls. Yet if the truth be known, a modified form of wife purchase exists even in modern society. As Westermarck says, "wife purchase and husband purchase still persist in modern society, though in a disguised form."

In the earliest written laws concerning marriage by purchase we find that the marriage consists of two separate transactions. First there is the agreement between the bridegroom and the bride's father or guardian, each formally binding himself to perform his part of the marriage contract. Secondly there is the delivery of the bride, the payment of the price agreed upon, or payment of part of the price and security that the remainder will be paid to the widow in case of death. We see here the beginning of the dower (from *dos*, Italian) in the later and more advanced sense—a provision for widowhood. In other words, instead of the price being paid to the father or guardian, it is paid to the bride.

It is interesting to glance at the wife-purchasing customs of various peoples and see what they considered a "good price" for a bride. The Navajos of New Mexico considered twelve horses an exorbitant price for a wife, and paid it only on rare occasions when the rank and personal charms of the woman warranted it.

The Patagonians exchanged mares, horses, silver ornaments, and trifles of various sorts for brides. One bride, we are told, brought "three horses, a silver cup, several rich skins, and a collection of inexpensive bracelets."

In Africa, we notice, horses are not considered "proper to exchange for wives," but it is perfectly fine to exchange cattle for women. Certain savage tribes hold an ox and a woman at about the same value.

Among the Kaffirs, ten cows is considered a fairly good price. But some brides bring as many as thirty. In Uganda, the usual price is four bullocks.

Origin of the Word "Wedding."—We who use the word "wedding" so casually and promiscuously do not realize that the very word betrays the great stage of wife purchase through which marriage passed. The *wed* was the money, horses, or cattle which the groom gave as security and as a pledge to prove his purchase of the bride from her father.

To quote from Walsh once again:

Often they (the Anglo-Saxons) were betrothed when children, the bridegroom's pledge of marriage being accompanied by a security or *wed*.

From this *wed* we derive the idea of *wedding* or *pledging* the bride to the man who pays the security for her.

We are told that as late as the middle of the 16th century the English in their marriage customs preserved traces of the ancient legal procedure connected with wife purchase. And in France it was, until the marriage of Louis XVI, the custom to pay down thirteen *deniers* upon the conclusion of a marriage contract.

A CONTEMPLATION OF EXOGAMY

One of the chief characteristics of primitive marriage systems is exogamy. No study of human marriage, brief as it may be, could be considered complete without a brief contemplation of this widespread custom.

What is exogamy? How did it begin and how develop? How does it affect our own marriage customs?

Exogamy, as we have seen, (p. 205), is the law of a tribe or a race prohibiting marriage between persons of the same blood or stock. It has existed since the earliest times. The horror of incest appears to have been an almost universal characteristic of mankind; although there are a few striking cases which indicate not only an absolute absence of this feeling, but an inclination to adopt the opposite view.

Many theories have been advanced by writers who have attempted to account for the widespread prohibitions of marriage between near kin in primitive life. Some ascribe these laws of exogamy to the fear of concentrating affection within too narrow a circle. Others believe such laws were created for the purpose of preventing marriages from taking place at too early an age. Still others declare that primitive man was afraid of making relationship within the tribe too involved. In modern times the reason given is that incestuous marriages prove injurious to offspring.

But there doesn't seem to be a shred of actual evidence to prove that any of these theories are true. We know only that mankind, as a general rule, has had a horror of incest from the very first; and that laws of exogamy were created for the purpose of preventing such marriages.

In New Britain it was believed that marriage within the totem (clan) would bring instant destruction to the woman. If she did not die, her parents or relatives usually killed her, so great did they consider her shame. The man's life was usually insecure also.

The Greenlanders refrain from marrying near kin even to the third degree. The reason they give is that such matches are unnatural and contrary to the wishes of the gods.

The Eskimo disapprove marriages between cousins, as do also the Chippewas, the Mahlemuts, and many other peoples, both savage and civilized.

Countless tribes have laws of exogamy, prohibiting men and women of the same clan or the same totem from intermarrying. The Algonquins put to death those who broke this rule. In Samoa such marriages were carefully guarded against, and even to-day incest is looked upon with dread. In China, incestuous marriages are not only prohibited but severely punished. Among the Dyaks a man is strictly prohibited from marrying a cousin, aunt, or niece. In Polynesia marriage with blood relations is avoided and rarely occurs. The Andamanese do not permit marriage with people even distantly related.

There is an old Greenland Eskimo tale which suggests our own belief that incestuous marriages result in poor offspring. The father of Kakamak is made very unhappy because all his grandchildren have died before reaching the age of puberty. Drawing his son-in-law aside, he says, "Perhaps we are too near akin." (Rink, "Tales and Traditions of the Eskimo.")

The same thought is found in Hadith, the collection of Mohammedan traditions. We read: "Marry among strangers; thus you will not have feeble posterity."

Two Mohammedan travellers of the 9th century relate that the Hindus never married relations because they firmly believed that such marriages would prove harmful to the children. They thought that alliances with unrelated persons improved the offspring—a belief which many of us have to-day but which has never been definitely or adequately proved.

Out of the laws of exogamy in primitive life grew queer rites and ceremonies which have left their influence upon the marriage customs of the world. We will touch upon these ceremonies as we study the marriage customs of modern society.

It is notable, however, that one of the most outstanding effects of exogamy upon modern life is that relations fear to marry; and it is rare indeed that cousins, or persons similarly close in relationship, marry each other.

THE MOTHER-IN-LAW "TABU"

A custom which has survived with astonishing obviousness is that which concerns the common tabu between a man and his mother-in-law. Although we treat the matter in a jocose manner to-day, and it has no significance other than that of supplying gaiety to poor wits, it formed at one time a real and important part of the marriage system.

The mother-in-law tabu began, in many cases, with betrothal. In the tribes of New South Wales, for instance, there is a tabu between a man and the mother of his promised wife. They may not see or speak to each other. In some Victorian tribes the girl's mother may not look at the suitor nor speak to him from the moment of betrothal until death. He is forbidden to pronounce her name.

Most authorities are agreed that the mother-in-law tabu either evolved from the laws of exogamy, or was a part of those laws. In other words, the avoidance of the mother-in-law probably was due to fear of unlawful intercourse—exogamy. The Gaboon natives have certain laws concerning the groom and the mother-in-law which, they say, were founded to "prevent incest." There are, indeed, a few recorded cases in which a man has married mother and daughter at once, and we can readily understand how primitive men evolved mother-in-law tabus to prevent just such a thing.

Professor Tylor has another explanation of the tabu. He says that the groom was regarded as an outsider and a stranger. Tracing this back to a system of "*cutting*" which existed in early life, he reaches the conclusion that the groom was not recognized in the family. This would cause a breach between him and the bride's mother, and they would try to avoid each other.

Sir John Lubbock traces back the mother-in-law tabu to the days of marriage by capture. "When the capture was a reality, indignation of parents would also be real; when it became a mere symbol, parental anger would be symbol-

ized also and would be continued even after its origin was forgotten."

Among the Zulus, the mother-in-law tabu is just one little detail in an intricate system of social and sexual tabus. The Zulu groom is placed under certain very definite restrictions. Among other things, he is not permitted to enjoy his mother-in-law's company, he may not remain in the same hut with her, nor may he pronounce her name.

The prohibition against uttering each others' names is found in the Torres Straits, among the Sioux and Omahas, the Kaffirs, in Baro, the Aru Islands, the Kei Islands, Wetar, and other widely separated places. From what we know of primitive reasoning, the uttering of the name was supposed to give the groom power over the mother-in-law, whose name he uttered. Therefore he was prohibited from doing so. This, according to the primitive mind, would prevent him from weakening the mother-in-law and perhaps inducing her to break the sexual tabu.

Among the Sarae and Barea the mother-in-law conceals herself when she sees her son-in-law approaching. Among the Arawaks, the son-in-law may not see the face of his wife's mother; if they live in the same house they are obliged to occupy opposite sides.

In Australia, a man scrupulously avoids his mother-in-law and does not exchange words with her, unless it is absolutely necessary. This prohibition of speech with the mother-in-law is practically universal throughout Australia.

A Congo proverb says, "My mother-in-law is angry with me, but what do I care? We do not eat from the same dish." (*Jour. Anthropol. Inst.*, vol. XXIV, p. 296.) This indicates the separation of the mother-in-law and the son-in-law, their avoidance of each other.

This amusing story is told of a Maori Christian wedding. It shows us that, though occupation or invasion of an area by civilized whites quickly breaks down aboriginal manners and habits of life, it cannot entirely destroy the age-old traditions of the natives.

A Maori woman, mother of the bride, came to the missionary, a certain Mr. Yate, and told him she was pleased that her daughter was going to be married but that, according to the custom of her forefathers, "she must be angry about it with her mouth." Returning from the church, the bride and bridegroom were met by the mother.

"She began to assail us all furiously. She threw her garments about, tore her hair, and said, 'Ah, you white missionary, you are worse than the devil. You first make a slave lad your son by redeeming him from his master and then marry him to my daughter. I will tear your eyes out.' The old woman, suiting the action to the word, feigned to snatch at my face, at the same time saying in an undertone that it was 'all mouth' and that she did not mean what she said."

So does the fiction of the custom remain after the fact has vanished. The Maori mother felt it her duty to show her dislike of her son-in-law, even though she was really delighted with the marriage. Old tribal customs like these, merging with the newer Christian marriage rites which are being introduced to our semi-barbarous brothers, add a certain touch of humour. It is not surprising that we have borrowed the mother-in-law tabu and have made it a frequent subject of humorous anecdote.

LOVE ENTERS MARRIAGE

It was not until the 9th century that women obtained the privilege of choosing or refusing their husbands according to their own judgment. Of course, rare cases occur not only earlier than the 9th century, but even in primitive life, where women have the sole right to select their husbands at will; but it was not until well into the 9th and 10th centuries that the custom became at all widespread.

That love entered into marriage at a fairly early period we know from the love tales that abound in mythology and in the many beautiful legends that have been bequeathed to us.

The Tongans, for instance, have a delightful tale of a chief who loved a maiden already promised to a superior. It seems that she was caught with other relations of a rebel and all of them were condemned to death. The young chief stole among the enemies, rescued her, and carried her to a cave which he had located. After many difficulties they escaped to the Fijis where they lived "happily ever after," in the manner of our modern fairy tales.

Another legend concerns Hinemoa and Tutanekai. Strangers, they met one moonlit evening near the bank of a river and love was born between them. At first this love began with stolen glances; then, we are told, they laughed boldly into each other's eyes; and finally Hinemoa stole away from her people and swam across to Tutanekai's island, guided in her course by his music.

Such legends and traditions as these prove without a vestige of a doubt that love actually entered into marriage, perhaps even earlier than we suspect. But what chance had the tiny flame of love to flare in many hearts when marriage by capture and marriage by purchase tore apart the souls of women? It was left to a higher and more advanced civilization to raise marriage from its primitive levels and give love the chance to blossom.

It is the position of the woman that gives us our surest index to the point of civilization which any people, or any race, has reached. Where we find marriage by purchase falling into decay, there we find the beginning of a civilization. Where we find marriage by capture still prevailing, we find a people in the lowest stages of barbarism. In modern civilized life marriage by capture occurs as a symbol; marriage by purchase is a rarity; marriage based upon love and mutual respect is the customary marriage.

Egypt, one of the earliest civilizations, honoured and respected its women. The Egyptians were ruled at different times by several queens. We are told that Amenophis IV (Akhnaton) was passionately fond of his wife and admired her as a noble and intelligent woman. He was sculptured

in one instance with his wife on his knees; in another, in the act of kissing her in a chariot.

Among the Greeks of the Homeric age, another early civilization, the father did not always keep the wedding presents for his own use, as was customary among other peoples, but bestowed them on his daughter as her marriage portion. The same process of development occurred among the Teutons. Originally the purchase sum, bride gifts, or bride-price went to the father or guardian. Gradually it came to be considered her own property and was given her upon the day of her marriage. Thus purchase became more or less a symbol, and elevated ideas regarding women followed in natural sequence.

Love Makes Elopement Necessary.—Elopement could not have flourished very greatly in primitive life. The women were guarded too closely (see pp. 166-167). Parents or guardians arranged marriages to suit their own greedy ends, consulting neither the wishes nor happiness of the girl.

But we hasten to correct the impression left by certain recent writers on the subject to the effect that elopement is a remnant of marriage by capture. All the facts we are able to gather indicate that precisely the opposite is true. In all ages elopements took place, rarely at first, a little less rarely later on, and finally as a general thing. And always love, or at least a great mutual attraction, induced the elopement.

We can easily understand why young people eloped in days when marriage by capture had hardly been forgotten and marriage by purchase was still a grim reality. To avoid marrying a man she disliked but who was able to pay the bride-price her parents demanded, a young woman would elope with the man of her choice. Or to avoid waiting until he was able to pay for his bride, to escape being forced to work for her under the service contract (see p. 215) the man would induce the girl he loved to elope with him.

It was decidedly a more difficult feat to elope in those days than it is to-day. In a social scheme which counts a

daughter a salable possession, a source of profit, it was not possible to "come home and be forgiven." The young people had to burn all bridges behind them, escape into a strange world, probably without means of livelihood, and begin life all over again far away from their people.

In Afghanistan, elopement without paying the bride-price to the family is considered an outrage. It is held very much in the same light as we would hold the murder of one of the members of the family. Such elopements are the cause of feuds among clans and tribes; frequently they cause long and bloody wars.

In Sumatra, on the other hand, the defeat of parental matrimonial plans by elopement is so common that it is now sanctioned and regulated by law. It is regarded as a special system of marriage and is called *telari gadis*.

To-day elopement is common among civilized peoples and is even looked upon with approval where parental objection seems to be unfounded. The pendulum of life swings sometimes in wide arcs across the ages.

THE DEVELOPMENT OF MODERN MARRIAGE

In the period just preceding Christianity, marriage was sometimes a solemn religious ordinance, sometimes a purely civil contract. But with the coming of Christianity, marriage was given a distinctly religious character.

At first it was the custom for Christian couples, seeking marriage, to ask simply for the blessing of their pastor. There were few other ceremonials connected with the marriage. But gradually the religious aspect of marriage became more and more significant, and in mediæval times the priest was even called in to bless the marriage bed. The custom of religious marriage, performed in the church or by a clergyman in the home, became general. In 1563 it was made binding at the Council of Trent.

Some of the tales concerning the origin of marriage in various countries are interesting enough to quote. The Chinese annals recount that "in the beginning, men differed

in nothing from other animals in their way of life. As they wandered up and down in the woods, and women were common, it happened that children never knew their fathers but only their mothers." The Emperor Fou-hi abolished this indiscriminate intercourse of the sexes and instituted marriage. (Gouget, "Origin of Laws, Arts and Sciences," vol. III, p. 311.)

The remote Laplanders have a tradition concerning the origin of marriage. They sing of Njavvis and Attjis who were the first to institute marriage and to bind their wives by sacred oath.

Cecrops is credited with having introduced marriage to the Greeks. He is said to have raised himself from obscurity to be king of the people later known as the Athenians, and during his sway he introduced many useful institutions.

The ancient Egyptians are indebted to Menes for the institution of marriage. At first they had no idea of conjugal union and gratified their desires more or less promiscuously. But Menes established definite laws and rules of marriage.

Possibly Christianity found its inspiration for a religious and binding marriage in the examples of these earlier peoples. We know, of course, that Christianity dealt a death blow to marriage by purchase; its advent was the advent also of a new, more wholesome and more civilized attitude toward women and toward marriage. But customs change slowly, and it required several generations before the civilized world was emancipated from the evils of wife purchase and woman barter.

The modern marriage, of whatever sect, is given a more solemn and religious aspect because of the background of Christianity. Yet despite this religious character, shreds of old traditions and customs still cling, blending the old with the new, making our marriage of to-day as colourful and romantic as any of the early or middle ages.

WEDDING-RING TRADITIONS

The true origin of the wedding ring will never be known. Many facts have been recorded concerning the ring and the part it has played in various marriage systems. But what of the facts that have not been recorded? What about wedding rings, and wedding-ring secrets, that have never been unearthed and that are buried forever in the dim and dusty past?

We know, for instance, that primitive man believed in magic. We know also, from what authorities tell us, that primitive man wove a cord with his own fingers and bound it around the waist of a woman he wanted. He believed—and she believed—that her spirit entered his body when this little ceremony was performed, and she was bound to him for ever.

Is it not barely possible that the idea of the wedding ring grew out of this ancient custom? The primitive mind conceived the cord around the woman's waist to be the magic vehicle through which her spirit passed into his body. Could not other people have conceived the same thing to be true of the ring?

Glancing a bit later, but still in the lowest primitive scale, we find a woman with fetters bound around the wrists and ankles to indicate that she has been captured and is the property of one man in the tribe. Couldn't the ring be the wristlet or the anklet in miniature? We do not know. There are no records. We can only contemplate, imagine, and accept the facts that are known.

The First Wedding Rings.—From the records that are available, it would seem that the Egyptians were the first to use the wedding ring in making marriage vows. Mention of such rings appears in ancient Egyptian literature. In hieroglyphics a circle represents eternity. It is not surprising that the circular form should have been adopted as being symbolic of the marriage ties, implying a marriage that will be binding throughout eternity.

Tradition likes to tell us that the first wedding ring was

Tablets of baked clay discovered in Babylon.

made of iron and adamant by Tubal Cain for a man named Prometheus. Perhaps it was. We cannot be certain. But it is quite likely that wedding rings were known and used long before that time.

The early Romans used a plain iron ring. The early Assyrians, Hebrews, and Greeks used rings as seals for signing orders and for transferring authority. But whether they used these rings in their marriage ceremonies or not we cannot be certain, except in the case of the Hebrews.

Among the Hebrews, the finger of God denoted his power. According to the Hebrew manner of marrying in early times, before the bride's dowry is produced and read, the

bridegroom putteth a ring upon the finger, in the presence of two witnesses, which commonly used to be the Rabbis, saying, withal, unto her, "Behold, thou art my espoused wife, according to the custom of Moses and of Israel."

The early Anglo-Saxon groom gave a pledge or *wed* to the bride at the betrothal ceremony (see p. 218). Included in this *wed* was a ring which was placed on her right hand, where it remained until the marriage ceremony, at which time it was transferred to the left hand.

The ring was used in marriage among Christians as early as 860. We are told that when a marriage settlement had been properly sealed, rings bearing the names of the newly married couple were handed around to the guests and examined by them.

Wedding-Ring Materials.—Rings have been made of every conceivable material. Besides the various metals, such as gold, silver, iron, steel, and brass, wedding rings have been made of rush, leather, wood. There is an instance on record of a ring being cut out of the bride's kid glove. There is still another record of a wedding ring being made, on the spur of the moment, of a piece of old leather.

One writer tells the story of a clergyman who used a brass curtain ring to marry a duke. Another tells of a

church key being used in an emergency. Horace Walpole in a letter to Mr. Mann (later Sir Robert Mann), dated July 27, 1752, includes this little incident:

"The event which has made most noise since my last is the extensive wedding of the youngest of the two Gunnings." He proceeds to describe an assembly at the home of Lord Chesterfield, with the Duke of Hamilton making love to Mrs. Gunning. Two nights later, it appears the Duke sent for a parson to perform the marriage ceremony. The parson refused to act without a license and a ring. The Duke declared in irritation that he would send at once for the Archbishop. At last they were married with the ring from the bed-curtain "at half-an-hour past twelve at night, at May Fair Chapel."

Long after the Norman Conquest peasants used circlets of rush because they could afford no better. Wedding rings in early times were fashioned to suit the means, rather than the tastes, of lovers. Some were large and heavy; others small and threadlike. They differed as much in shape and size as they did in the materials of which they were made.

The rings of the Hebrews were generally of large size and elaborate workmanship, as were the rings of the Greeks. The Romans used plain, heavy iron rings. It was, incidentally, a custom of the Romans to give the keys of the house with the bridal ring. One such ring with the key attached is illustrated. (See p. —)

Mr. Wood tells us that in Iceland a large ring was used, variously formed of bone, jet, gold, silver, stone.

Sometimes [he says], it was so large as to allow the palm of the hand to be passed through it. In the solemnization of a betrothal contract the bridegroom passed four fingers and his palm through one of these rings, and in this manner he received the hand of his bride. Sometimes these rings for confirming mutual contracts were placed upon the altar before their use. We may, perhaps, trace this custom to an old form of marriage in the Orkneys where the contracting parties join their hands through a perforation, or ring, in a stone pillar.

A writer of the early 17th century says, "Howbeit, it skilleth not at this dae what metal the ringe be." And in the 18th century, we are told, parsons always carried a supply of brass curtain rings with them—to be ready for an emergency!

Significance of the Circle.—"The form of the ring being circular, that is round, and without end, importeth thus much: that mutual love and hearty affection should roundly flow from one to the other, as in a circle, and that continually and for ever."

By its very form the wedding ring is a symbol of the intention of both parties to keep for ever the vows they have made, to recognize as eternally binding the ties which join them in marriage. Herrick has expressed it beautifully in this bit of simple verse:

Julia, I bring
To thee this ring,
Made for thy finger fit;
To show by this
That our love is
Or should be, like to it.

Close though it be,
The joint is free;
So, when love's yoke is on,
It must not gall,
Nor fret at all,
With hard oppression.

But it must play,
Still either way,
And be, too, such a yoke
As not, too wide
To overslide,
Or be so straight to choke.

So we who bear
This beam, must rear
Ourselves to such a height
As that the stay
Of either may
Create the burthen light.

And as this round
Is nowhere found
To flaw, or else to sever,
So let our love
As endless prove,
And pure as gold forever.

Some authorities connect the circular form of the ring with the rounding out of the life of the man or the woman. To the primitive mind, a man without a wife is half a man; a woman without a husband is half a woman. When they are married the unit is complete. This is represented by the circle which symbolizes the linking or joining together of the two.

Others claim that the wedding ring in the form of a circle simply grew out of the circular fetters or bracelets placed upon the captive woman of primitive times. According to this belief, the idea of eternity as implied by the circle came later.

Changing Fashions.—The wedding ring has not always been the simple gold band we know. As has already been indicated, almost every conceivable material has been used for wedding rings, and many sizes and forms were used also. The first rings were heavy, awkward, clumsy. The Greeks made rich and elaborate rings, many of them with seals engraved upon them. Some wedding rings were adorned with precious stones; others were just ugly bands of iron.

In Shakespeare's time it was the custom to make engravings on the wedding ring. Sometimes as many as three or four lines of verse were engraved inside the ring in letters so minute as to be scarcely readable. This was an attempt to provide enduring record of the marriage. Many mottoes were created for bridal rings. Some of them which have been brought to our attention are, "I will be yours while life endures"; "In thee my choice do I rejoice" and this bit of verse—

Love in the small but perfect circle trace,
And duty in its soft but strict embrace.

At about the same period, bits of religious wisdom began appearing on the wedding rings used in Jewish marriages. This practice continued into the 17th century when almost every ring was inscribed with a motto or quotation of some sort. Only in those days the word was not "motto." The sentiments were known as "poesy verses" or "chantons."

We are told that the ring with which James, Duke of York (afterward King James II), married Mary of Modena was of plain gold set simply with a ruby. During her exile, the Queen showed this ring to the nuns of Chaillot. She had given up all her jewels, but this ring she prized above everything and would not give up.

Louis IX of France was married, in his youth, to Marguerite of Provence. Marguerite, you remember, was the victim of a cruel jealousy on the part of the King's mother, Blanche of Castile. Louis, who loved Marguerite dearly, wore throughout life a ring ornamented with a garland of lilies and daisies. An enormous sapphire bore the image of a crucifix, and the inscription, "*hors cet anel pourrions nous trouver amour.*"

Mary, Queen of Scots, was married in the privacy of Rizzio's chamber to Darnley with a diamond ring enamelled red. Later, when the nuptials were solemnized in the Chapel Royal of Holyrood, three rings of magnificent richness were used; but Mary always valued most the red enamelled ring with which "she was espoused."

Jones, in his "Finger-Ring Lore," tells us of one of the smallest wedding rings of which there is record. He says:

Perhaps one of the smallest wedding rings on record is that which is mentioned in the *fiancailles* of the Princess Mary, daughter of Henry VIII, to the Dauphin of France, son of King Francis I. The fiancé was represented on that occasion by Admiral Bonnavet, the French Ambassador. The Dauphin was born February 28th, 1518, and the event of his birth was made a matter of state policy for more intimate alliance with France. On October 5th, in the same year, the bridal ceremonies took place at Greenwich with great pomp. King Henry took his station in front of the throne; on one side stood Marie of France and Queen Katherine; in front of her

mother was the Princess Marie, just two years old, dressed in cloth of gold, with a cap of black velvet on her head, blazing with jewels. On the other side stood the two legates, Wolsey and Campeggio. After a speech by Dr. Tunstal, the Princess was taken in arms; the consent of the King and Queen was demanded, and Wolsey approached with a diminutive ring of gold, fitted to the young lady's finger, in which was a valuable diamond. Admiral Bonnivet, as proxy for the baby bridegroom, passed it over the second joint. The bride was blessed, and mass performed by Wolsey, the King and the whole court attending it.

This admirable description gives us an excellent picture of court infant betrothal as it was practised by powerful nations to make themselves more powerful. And it gives us also an idea of the importance attached to the ring at that period.

It would appear that the English people, after Queen Mary's time, favoured the plain gold band. There seems to have been a reaction against the elaborate and richly embellished wedding rings that were being used until that period. The plain gold band became popular among all English-speaking peoples. Finally, the custom spread over Europe, and to-day the gold band is considered the correct form for the wedding ring.

Tradition tells us that at the marriage of Queen Mary with Philip of Spain in 1554 some controversy took place as to the nature of the ring. The Queen herself ended the dispute by saying finally that she would use a simple ring unadorned with gems, for "she chose to be wedded with a plain hoop of gold, like other maidens."

The Ring Finger.—It is said that the ring is worn on the left hand to signify the subjection of the wife to the husband. This may be mere superstition; we do not know. But it is certain that in early times the right hand signified power and authority, the left, subjection. Thus there may be some truth in it.

The wedding ring is worn to-day on the fourth finger of the left hand. A pretty bit of anatomical fiction, which has come down to us from the ancient Greeks, is that a certain vein of blood, passing directly from this finger, flows on to

the heart. Probably the true reason for wearing the ring on this finger is that it is the least used of all the fingers, and therefore ornaments worn upon it are not inconvenient.

There was a period in England during which the wedding ring was worn on the thumb. In Southerne's "Maid's Last Prayer" (Act IV, p. 67) we find:

Marry him I must, and wear my wedding ring upon my thumb, too, that I'm resolved.

At Stanford Court, Worcestershire, may be seen portraits of the ladies of the famous old Salway family, in the days of Queen Elizabeth. It is significant that all of them wear their wedding rings upon their thumbs. But it is possible that this was only a passing fad, like the "Orange Blossom" rings and "Venus" rings advertised by jewellers at the present moment. According to the "British Apollo" the rings were placed on the proper finger at the time of the marriage ceremony, but later the ring was removed by the fashionable bride and placed upon the thumb. This custom refers to the time of George I, but the same state of affairs undoubtedly prevailed at the earlier period.

A great deal of sentiment has always surrounded the wedding ring. It is related that when Baron Rosen was sent a captive to Siberia, in consequence of political tumults, his family trinkets were taken from him. He was required to give up a gold ring which he wore on his finger. He refused. "It is my wedding-ring," he said, "and you can have it only by taking the finger also." We are told that the ring was spared—evidently because the guards had as much respect and sentimental regard for the wedding ring as the Baron. Surely they would not have spared him on the strength of his pretty speech.

Dean Comber and Wheatley sum up the whole tale, or symbolism, of the wedding ring in this manner:

The matter of which this ring is made is gold, signifying how noble and durable our affection is; the form is round, to imply that our respect (or regards) shall never have an end; the place of it is on the fourth finger of the left hand, where the ancients thought

there was a vein that came directly from the heart, and where it may be always in view; and, being a finger least used, where it may be least subject to be worn out; but the main end is to be the visible and lasting token of the covenant which must never be forgotten.

WEDDING CUSTOMS AND THEIR ORIGINS

There are many customs that are so natural and obvious a part of our marriage ceremonials that we do not even stop to think about them. Yet each custom has a little story of its own. Each custom stretches back across the centuries and links us a little closer to our forefathers.

Bancroft says:

To things we do not understand we give names, with which by frequent use we become familiar; and then we fancy that we know all about the things themselves.

Apply this to wedding customs. Don't we do things and say things because it is the custom to do and say those things? And because we are accustomed to doing and saying these things by frequent popular use, don't we think that we know all about them?

Yet how many people really know why rice is thrown after the bride, what the old shoe signifies, how the honeymoon originated, when the bachelor's dinner originated? We accept these things because they are custom. Now you are going to find out precisely why they are custom.

The Wedding Ceremony.—Before considering the various customs attendant upon the ceremony, let us glance at the ceremony as a whole. We know that, from the earliest days, all marriages have had a religious character; Christianity emphasized this religious aspect of marriage and made of the ceremony a sacrament.

Among the Anglo-Saxons, during the first centuries of Christianity, certain marriage vows were repeated and certain rites performed out of which have grown the rites and ceremonies now prevailing. Walsh and Thrupp, both authorities, tell us that the bride was taken "for fairer or

fouler, for better or worse, for richer or poorer." Among other things, she promised to be "buxom and bonny" to her future husband. It was the custom at the ceremony for the bridegroom to put the ring on each of the bride's fingers, on the left hand, in turn. At the first he would say, "In the name of the Father," at the second, "In the name of the Son," at the third, "In the name of the Holy Ghost." Reaching the fourth and final ring finger he said simply, "Amen" and the wedding ceremony was completed.

Some of our marriage customs are borrowed from the ancient Hebrews. The Hebrew marriage ceremony is picturesque and colourful. Like the Christian ceremony it is tradition-bound, and many of the customs observed in the service reach back to the days of long ago.

The bride dresses in pure white satin, and faces the bridegroom under the *chuppah*. [This is simply a canopy, like the Anglo-Saxon care-cloth.] The ritual is read, and a cup of consecrated wine is presented to the bride and groom to be sipped. Then comes the address from the officiating rabbi, who closes by taking a glass of wine in his hands and pronouncing the seven prescribed benedictions. Again bridegroom and bride taste the cup, after which the groom places it on the floor and crushes it to atoms under his feet, as a symbol that the marriage must last until the fragments can be united. The first kiss under the new relation is given, and the newly wedded man escorts his wife from *chuppah* to entrance, and then home to the marriage feast. (*William S. Walsh, "Curiosities of Popular Customs."*)

The "something blue" which brides are advised to wear at wedding ceremonies is borrowed from the ancient Israelites. They were "bidden to put upon the borders of their fringed garments a ribband of blue—blue being the colour of purity, love, and fidelity." Brides are still advised to include a bit of blue in the bridal costume, according to this old bridal saying:

Something old and something new,
Something borrowed and something blue.

Obvious survivals are found in our modern marriage service. The "bridal escort" goes way back to antiquity.

The very phrase, "Who giveth this woman to this man?" is a relic of marriage by purchase. The custom of decorating the church with flowers and of carrying flowers in the bridal procession is many generations old. The very wording of the marriage service is similar to that of our forefathers, a few obsolete words only being changed.

The Bridal Escort.—"The Book of Etiquette" gives the accepted method of conducting a modern church wedding. Among other important features of the ceremony, it gives space to "The Wedding Procession" which is considered an important feature even of the simplest marriage.

The ushers enter first, walking slowly down the aisle, two by two. The bridesmaids follow in the same manner, the maid of honour, who is unattended, comes next, followed by the bride, who leans on the arm of her father. Flower girls may precede the procession or they may walk just in front of the bride, and a page or pages may be added to the group to bear the train of the bride's gown. The bride is always the last to enter, and she comes alone or with whoever is to give her away at the altar.

Why this impressive escort for the bride? How did the custom originate?

The "best man" is undoubtedly a relic of marriage by capture. When the ancient bridegroom set out to capture a bride, he was usually accompanied by a strong-armed friend who covered the pursuit of the girl's protector. (See p. 209.)

In early Anglo-Saxon marriages, men were no less primitive in their courtships than their forefathers. We are told, for instance, that

the heathen Anglo-Saxon stole into the girl's home, bluntly announced his purpose, and had a horse brought to the door for her. She didn't have the opportunity even to say "This is so sudden." If willing, she was treated gently. If not, her wrists were bound and she was tied to the saddle. Of course, her father pursued out of the kindness of his heart, but the wise groom always had one or more friends ready to cover his retreat. These fighting friends are believed by some antiquarians to be the original groomsmen.

Seldon, in his "Uxor Ebraica" (1646), tells us that in

mediæval times the groomsmen were known as *bride knights*. It would appear that the original purpose of the groomsmen disappeared, but the custom of having them remained. The pendulum swung to the other extreme, and instead of serving the groom these *bride knights* served the bride. They led her to the church, accompanied her to the altar, and after the ceremony relinquished her to the groom.

The origin of the custom of bridesmaids is to be found, according to all the known facts, in the old custom of pretending to struggle. You remember that after marriage by capture fell into decay, it became the custom for the bride to pretend that she was captured, and that she was unwilling to go with the groom. It was considered the modest and maidenly thing to do. Her friends would attack the bridegroom and his party and attempt to rescue the bride (see p. 212). As the bridegroom's fighting friends developed into the groomsmen, the bride's fighting friends possibly developed into the bridesmaids.

But some authorities take a different view of the origin of the bridesmaid. It was anciently the custom in Rome to have ten witnesses at the solemn marriage ceremony. These witnesses were usually friends of the bride's family. There are antiquarians who firmly believe that the custom of having bridesmaids developed from the old Roman custom of having witnesses.

The flower girl of to-day is based upon a picturesque mediæval custom. Two little girls, usually sisters, dressed precisely alike and carrying garlands of wheat, walked before the bride in the marriage procession. This symbolized the wish that the union would prove fruitful, and that the bride and groom would have "an abundance of happiness."

Later ornamental baskets replaced the garlands of wheat, and flowers were strewn from these baskets in the path of the bride. It is not known definitely how old this custom of strewing flowers before the bride actually is, but we find

mention of it in Herrick's "Hesperides" (1648). We quote the following:

The showers of roses, lucky foure-leav'd grasse,
The while the cloud of younglings sing,
And drown ye with a flowrie spring.

The custom of pages originated in England at an early date. We find pages playing a conspicuous part in court processions in Italy during the Renaissance, but we have no record of the page in the wedding ceremony. It was during mediæval times in England that the page, probably for the first time, took his place in the marriage group, where he has remained even to this day.

Usually the groomsmen wear at the marriage a bit of jewellery presented by the bridegroom. This is a curious survival of primitive marriage customs, when the groom was obliged to capture the bride with the help of his friends. Because she was fleet-footed (or perhaps because he was lazy), we can imagine him bribing his friends, or possibly even her own kinsmen, to lure her to the place where he was waiting.

During the time of the *bride knights* the bride presented the gifts instead of the groom. The glove was considered an acceptable gift for the services rendered by the *bride knights*. But to-day it is the bridegroom who makes the gifts, while the bride remembers her bridesmaids with some slight token.

Origin of the Bridal Veil.—There are various contradictory tales concerning the bridal veil and its origin. Some writers believe that the veil originated in the covering of the bride in ancient times to show her submission. Others claim that the exact opposite is true—that the veil was originally an emblem of freedom and that it succeeded the custom of wearing the hair flying free at the marriage ceremony.

We know that among various ancient peoples it was customary to keep the bride hidden from her future husband until the day of the wedding. In Egypt, for instance,

the groom was not permitted to see the face of his bride until the marriage day. On this occasion he went through the solemn ceremony of uncovering the face. The same sort of custom prevailed among the Arabs, among the Hindus, and among various other European and Asiatic peoples. Perhaps the custom of wearing a veil grew out of these earlier customs of concealing the bride entirely.

At Druse marriages, for instance, it was at one time the custom to keep the bride hidden from her future husband. Later it became the custom to hide her in a long red veil on the day of marriage. A veil is used to conceal the face entirely in China, Burma, Corea, Russia, Bulgaria, Manchuria, and Persia. Among the Bedouins the bride is completely concealed under a canopy carried by several girls. Among the Chinese, we are told, a sacred umbrella is held over the head to prevent evil from coming down upon that sensitive part of the body.

It is barely possible that the custom of the bridal veil originated with the Hebrews. At Hebrew weddings it is customary to erect a square vestment with pendants about it over the heads of the bride and groom. This is a sort of canopy, and it is held over the heads of the bride and groom by four intimate friends. Although the theory has never been advanced to our knowledge before, it would seem to us this custom of holding a canopy (a care-cloth among the Anglo-Saxons) over the two people who are to be married grew out of the religious desire to recognize a higher power—that is, to symbolize the fear of this higher power by protecting the bride and groom with the canopy.

In primitive marriages the rites and ceremonials were given a religious character. The purpose of this religious aspect, as has previously been mentioned, was to invoke the help of the gods in making the marriage happy and prosperous (see p. 208). Does it not seem possible that the canopy was erected for the purpose of protecting the bride and groom if the gods proved dissatisfied with the marriage? The sacred umbrella of the Chinese seems to bear out this belief.

The veil could have developed from the canopy or care-cloth. It would have evolved in a period when man considered himself above the universe, and woman entirely subjugated to him. The veil would be her mark of submission—to him as to the higher beings.

But this is merely conjecture. As is also the belief that the veil originated in sexual shyness in women and the attempt to hide themselves from view. But we know that, following quickly upon the canopy, the veil found a place for itself in the marriage ceremonies of the early Romans and Hebrews. We are told that these veils were of a yellow stuff—possibly linen—and that they were all-enveloping, like a shroud. Among some early peoples the veil was indeed a shroud. It was worn at the marriage ceremony, placed away, and taken out again only when the woman was ready to be buried. Among sentimental European peasantry it is still the custom to place the bridal finery in a chest and take it out again only for the purpose of “burying the bride” in it.

The early Anglo-Saxon bride went to the wedding with her hair hanging loosely—as a sign of her freedom, we are told. After the marriage ceremony, the hair was bound up as a sign of submission. According to this, it would appear that the veil was a sign of freedom rather than one of submission. It became popular in England in the days of Shakespeare and took the place of the flowing tresses.

Although we cannot be definite concerning the origin of the bridal veil, we know that no matter what its original significance may have been, it is to-day merely one of the pretty customs which the bride borrows from the pages of yesterday to make her own marriage more romantic and picturesque. It has no real significance; it serves simply the purpose of making the bride more lovely and “veiling her modesty from the world.”

Bride Favours and Flowers.—Among ancient peoples, the knot seems to have been the symbol of faith. The “true love knot” was used to symbolize the indissoluble tie of love and duty in marriage.

The early Anglo-Saxon bride gave to her friends small knots or ribbands to wear or carry. This custom survives in the buttonhole bouquets of the groomsmen, and the ribbon-tied Bibles or bouquets of the bridesmaids.

The custom of bride favours possibly grew out of the custom of the "true love knot." The custom of wearing fragments cut from the bride's ribbons was introduced into England from Spain when Charles II brought Catharine of Portugal to be England's Queen. Later, instead of destroying the bride's ribbons it became the custom to present the groomsmen with huge white satin rosettes, which were called bride's favours, and which they wore throughout the ceremony.

During the reign of Queen Elizabeth it was the custom for the bridegroom to present the guests with gloves, garters, scarfs, and other "favours." Later this custom was discarded, and to-day "favours" or slight tokens of appreciation are presented to the groomsmen only.

Orange blossoms have been worn or carried by brides since earliest times. The blossoms are believed to portend good luck and happiness. Both Spenser and Milton were of the opinion that the orange was the "golden apple" presented to Jupiter by Juno on their marriage day, and it is very probably because of this belief that the orange blossom came to be associated, in later times, with happiness in the marriage tie.

Myrtle was a favourite of the ancients. They believed that its perpetual freshness was a token of the fact that it was a favourite of the gods; therefore it was used by them to symbolize constancy in duty and affection.

Lilies-of-the-valley and roses have always been favourite wedding flowers, but because of their prettiness rather than of any significance. However, we are told that the ancient Greeks regarded the rose as queen of flowers and considered it an emblem of beauty and happiness. And young Romans were in the habit of sending baskets of roses to the ladies they admired.

At one time a garland of flowers was absolutely essential in the marriage ceremony. It was placed on the bride's head and was known as the "coronet of the good girl." Rare old books tell us that it was the privilege only of the virtuous bride to wear a garland of flowers, and that to prove her inalienable attribute of virtue the bride should wear "a ring on her finger, a brooch on her breast, and a garland on her head."

Cutting the Bride's Hair.—In early life it was a widespread practice to deprive women of their ornaments as soon as they were married. Some peoples actually mutilated their brides so that they would not be attractive to other men.

In early Japan, for instance, the eyebrows were shaved off. The Japanese considered heavy eyebrows one of woman's greatest charms. Other people blackened the teeth of brides. Still others tattooed the face. Many cut off the hair.

This cutting of the hair had two possible meanings. The first was to make the woman unattractive. The second was to symbolize her submission and subjugation to the man.

Thus in Egypt the bride's hair was tied up upon the conclusion of the wedding ceremony. This was for the purpose of symbolizing the giving up of her freedom. The custom prevailed also in ancient Britain and among various other peoples.

One authority says that the custom of shaving off the bride's hair was to protect her from danger. This may have an element of truth, although we doubt that it was the sole reason for cutting off the hair. We know that in primitive life one part of the body was sacrificed to protect the rest. Mandan boys, for instance, have the little finger cut off at puberty "as a sacrifice to their patron deity." When a Japanese boy reached puberty a "god-father" cut off his forelock and gave him a new name. It is very possible that some peoples cut off the bride's hair at marriage to insure her safety and protection.

The custom of cutting the bride's hair is now obsolete except among remnants of savage tribes. But some authorities still connect this ancient custom with the bridal veil. (See p. 242.)

Casting the Shoe.—Many and various are the tales concerning the bridal shoe or slipper. No two authorities seem to be entirely agreed as to its origin.

William J. Fielding says:

During all ages and in the folklore of all races shoes have been a symbol of the female genitals and rice (or wheat or other common cereal) the symbol of the male fructifying seed. Hence, we unconsciously indicate the sexual character of the new relationship with the normal outcome of fruitfulness or prolificacy, which the conventions of modern society would not permit us openly to mention.

That the casting of a shoe after the bride signifies a fruitful marriage seems to be implied in the old Mother Goose rhyme:

There was an old woman who lived in a shoe;
She had so many children she didn't know what to do.

But as a general rule, authorities are inclined to believe that the true significance of the shoe is an exchange of authority.

Among the Assyrians and the Hebrews, for instance, when a bargain had been made, a man usually gave his sandal as a token of good faith and to symbolize the transfer of property. The Egyptians had the custom of exchanging sandals to show that property had been exchanged or authority granted. For instance, there are in existence actual paintings of Egyptian slaves showing them carrying their masters' sandals in token of submission.

The flinging down of a sandal upon a territory was a symbol of possession.

Upon the land of Edom do I cast my shoe. (9th Psalm.)

Among the ancient Israelites, when property was bought and passed into another's hands, it was customary for the

seller to pull off his sandal as a sign that he surrendered all claim to it.

Thus hurling the shoe after the bride was meant originally, it would seem, to indicate the transfer of authority over her from her father to her husband. We are told that the Anglo-Saxon bridegroom always hung a slipper in a prominent place in the new house, for the sentiment of that period seems to have been:

A spaniel, a woman and a walnut tree,
The more they are beaten the better they be.

In describing a solemn marriage ceremony, William S. Walsh says:

The father gave to his new son one of his daughter's shoes, in token of the transfer of authority which he effected, and the bride was at once made to feel the change by a tap or blow on the head given with the shoe. The husband on his part took an oath to use his wife well. If he failed to do so, she might leave him, but by the law he was allowed considerable license.

He was bound in honour "to bestow on his wife and apprentices moderate castigation." An old Welsh law decides that three blows with a broomstick on "any part of the person except the head" is a fair allowance, and another provides that the stick shall be no longer than the husband's arm nor thicker than his middle finger.

In Arabia it was once customary for a man to have first right to marry his cousin. He was not obliged to marry her, but any one seeking to do so, had first to gain his permission. If he gave up his right to the hand of his cousin he said, "She was my slipper, I have cast her off." It meant, of course, "I had first right to her as my cousin, but I have given up that right."

Some authorities believe that the wedding shoe is a relic of marriage by capture, and that it grew out of the custom of hurling missiles after the robber bridegroom by the father or guardian of the girl. But while they differ on this point, they are inclined to agree that the shoe having always been a symbol of authority, is connected in the marriage ceremony with the transfer of possession and authority.

In connection with the shoe, it is interesting to note that the foot has been regarded as a sacred symbol as far back as the Bronze Age. Pottery, breast-plates and other relics of that period show decorations in the form of human feet. Ancient Greeks and Romans, we are told, approaching a certain shrine were compelled to remove their sandals and approach in their bare feet. It was a form of worship.

Another curious thing is that the throwing of the shoe has always been accounted lucky. In Scotland, for instance, the custom was not confined solely to marriages, but old shoes were thrown after a sailor going on his first trading voyage, a man starting out on a new enterprise, etc. The Irish appear to have had the same custom. Old shoes were thrown after a person when his friends wished him to succeed in whatever it was he was starting.

In his "Lyrical Monologue" Tennyson mentions the custom of casting the shoe for luck. He says:

For this thou shalt from all things seek,
Marrow of mirth and laughter,
And wheresoe'er thou move, good luck
Shall throw her old shoe after.

In her Journal Queen Victoria relates that when she first entered Balmoral Castle (September 7, 1855) old shoes were thrown after her for good luck. And in Germany, we are told, it was until recently the custom for the bride to be attended to her chamber, where she took off her shoe and threw it to all present—as we to-day throw the bridal bouquet. The one who caught the shoe was considered lucky. He or she would not only be the next to marry, but would have good fortune throughout life. A similar custom prevailed in Kent, except that the groomsmen selected by the bride cast the shoe among the bridesmaids, and they alone were privileged to jump for it.

"The Book of Etiquette," sanctioning the age-old custom of casting the shoe after the bride, says:

It would not be objectionable at all if some over-enthusiastic individuals did not overdo it to the extent that it becomes almost

riotous. After a solemn, dignified, well-ordered wedding ceremony, and a charming reception, it is nothing short of ridiculous to spoil it all by boisterously overdoing an old tradition.

The Handful of Rice.—The practice of throwing rice after a departing bride and groom originated in primitive times. Among early peoples rice and grain were emblems of productiveness, and grain of some sort was used in the marriage rites to symbolize fruitfulness for the union.

Rice was not always the grain used. We are told that an old Greek custom was to pour flour and sweetmeats over the bride and groom, to symbolize an abundance of all that is sweet and good and desirable. There are records of wheat having been used among the early Anglo-Saxons, and certain peoples used corn.

According to records that have come down to us it was customary in Greece to place a piece of raw cotton on the mule which carried away the bride's dowry. When the mule, bearing the dowry, reached the bridegroom's house, his mother repeated the little ceremony and placed another bit of cotton on the load. The purpose was to insure a future abundance of good things for the bride and groom.

Rice has always played an important part in the Persian marriage ceremony. Among these people rice is regarded as an emblem of fruitfulness. We are told that the bride and groom, after marriage, were required to meet at midnight and go through this ceremony: The sponsor for the man would touch the forehead of the woman and ask her if she would have the man. Replying in the affirmative, she gave her hand to him. Then the same ceremony was gone through by the sponsor for the woman, and the hands of the contracting parties were joined. After this ceremony rice was scattered over them and prayers were offered for their fruitfulness.

Some authorities tell us that the practice of throwing rice originated in an entirely different manner. They say that rice was thrown after the bride and groom for the purpose of giving food to the evil influences that sur-

rounded them. It was a primitive belief that evil spirits were always present at a marriage, and it was for the purpose of appeasing these spirits and keeping them from doing injury to the bridal pair that, according to some writers, the custom of rice-throwing was originated.

Still another theory is that the rice is an inducement to the soul of the bridegroom to stay. In Celebes, for instance, there is a widespread belief that the soul of the bridegroom, unless bribed, is likely to fly away at marriage and never return. To prevent this, rice is scattered over him. Thus the soul is induced to remain.

Among various peoples the act of eating rice constitutes marriage. How customs such as these originated is not known; unless eating together symbolized living together and eating out of the same dish, and rice was used possibly because it happened to be the food of the locality. We know that primitive peoples always ate together to symbolize friendship, peace, and kinship.

The Batta groom is obliged to sit next to the bride publicly and to eat rice with her from the same dish. At Dyak marriages, the bride and groom first eat together and are then sprinkled with rice. At the Malay wedding, friends put into the hands of the bride and groom uncooked rice, and with this they feed each other simultaneously.

From all the records concerning rice that have been preserved, it would seem that the use of rice as a symbol of productiveness or fruitfulness is the most plausible explanation of our custom. Thus, when you cast your handful of rice after the bride and groom what you are really doing is indicating to them your wishes for their fruitfulness—a sentiment which modern society does not permit you to express in the ordinary way.

The Marriage Feast.—The simplest and most universal of all marriage ceremonies is that of eating and drinking together. At the risk of being monotonous, we wish to repeat that eating together in early life symbolized kinship. The mutual partaking of food appears to have been

one of the strongest ties of early life. One of the most important of sexual tabus was that of eating together.

To the primitive mind, eating together produced indentity of substance, of flesh. Therefore those who ate together were kin. The savages had "female food" and "male food" and there were food tabus as there were sexual tabus. We can scarcely conceive of the importance held by food in primitive culture.

Eating together, among many primitive peoples, constituted marriage. There was little or no other ceremony. In the Fijis, for instance, the marriage ceremony was considered complete as soon as the pair had eaten out of the same dish. In Madagascar to become man and wife it is necessary to eat out of the same dish. In Ceram the bride eats a male opossum and the bridegroom eats a female opossum. In Barbar the bride and groom were required to eat together out of one dish. This same custom in Rae is a "token of friendship."

In ancient Rome, at the dignified and solemn marriage by *confarreatio*, the bride and groom ate together. Drinking together, we are told, was also a common method of solemnizing the marriage.

The Navajo bride and groom ate maize pudding together. Among Nufi people it was the custom to celebrate the payment of the bride-price and the solemnizing of the marriage by feasting. Eating and drinking together formed, and to some extent still forms, part of the marriage ceremony in Japan, in Russia, in Scandinavia, among various Brazilian tribes. Until recently the Servian bride ate only once in her life with a man, and that was on her marriage day, when she ate with her husband.

At marriages among the Hebrews the rabbi hands to the couple a glass of wine which has been blessed. After both drink from it, the glass is smashed under the heel of the groom. The breaking of the glass symbolizes eternity; the meaning behind it is that the bride and groom will be joined in happiness and love until the glass is made

whole again, which is another way of saying for ever. Isn't it possible that this custom goes back even farther? Perhaps the glass is broken to prevent magic use of the vessel, by enemies, to bring harm upon the bride and groom. Many such fears and superstitions existed among early peoples.

From all these customs it is easy to see why the marriage feast came to be accepted, at last, as a customary part of marriage festivities. "At marriage, the friends of both feel somewhat bound together by the union of the pair, and expression is given to this by eating and drinking together."

Sir John Sinclair tells the following in his "Statistical Account of Scotland" (1792):

When a young man wishes to pay his addresses to his sweetheart, instead of going to her father and professing his passion, he goes to the public house and, having let the landlady into the secret of his attachment, the object of his wishes is immediately sent for, who almost never refuses to come. She is entertained with ale and brandy, and the marriage is concluded upon. The second day after the wedding, a *creel*, as it is called, takes place. It is very similar to our [English] wedding breakfast.

The Wedding Cake.—The wedding cake is a direct survival of a particular kind of cake used in Roman times among the highest members of the patrician families. At the aristocratic Roman *confarreatio* the bride and groom not only ate together, but feasted the guests; and we are told that the cake of *confarreation* was broken over the bride's head as a symbol of plentifulness. Each of the guests took a piece of the cake to insure plentifulness for himself or herself.

Many of the American Indians used a bride cake in their marriage ceremonies. The Iroquois, for instance, have a peculiar kind of meal cake which plays a conspicuous part in the marriage festivities. The bride makes this cake and presents it to the groom. Traces of this custom still remain; and a similar custom is found also among the Fiji Islanders.

The early Anglo-Saxons had huge baskets of small dry crackers at their marriage ceremonies. Each guest pocketed one and took it home. Those that remained were distributed to the poor. Later it became the custom for the guests themselves to bring to the wedding small richly spiced buns which were piled in one huge mound on the table. It was a popular custom for the bride and groom to attempt to kiss each other over this mound, and if they succeeded they were assured lifelong prosperity.

We are told that the wedding cake, as we know it to-day, was the brilliant idea of a genius of a French cook who was travelling through England. Stopping for a while in London, he noticed the inconvenience of piling hundreds of small spice cakes into one mound, and he conceived the idea of icing this mound into one solid mass. So was the wedding cake born.

It is the traditional right of the bride to cut the first slice of cake. The superstition is that if any one else cuts into the cake first, the bride's happiness and prosperity are cut into.

Another old custom is to have a ring baked in the cake, the superstition being that the person who finds it will be the next to marry. And still another superstition is that if one takes home the piece of bridal cake and sleeps with it under one's pillow, the future husband will appear in a dream. Perhaps it is for that reason that slices of bride cake are conveniently packed in small boxes tied with white ribbon at modern marriages!

Origin of the Trousseau.—The word "trousseau" is from *trusse*, meaning a little bundle. In earliest times the trousseau was in the nature of a dowry and was an indirect way of compensating the bridegroom for the money or goods which he paid to the girl's father. During the later stages of marriage by purchase, these goods were handed over to the daughter as her marriage portion. Upon the decay of marriage by purchase, the bridegroom did not give money or goods to the father, but the latter nevertheless supplied the daughter with her dowry.

We can understand how the hope chest idea must have grown out of the custom of the dowry, among girls who realized the part money and possessions played in winning a husband. Thus in Roumania, for instance, girls begin at a very young age to make their bridal finery and the linens they will require for their homes. At one time the bridegroom had the privilege of examining the trousseau and deciding whether or not it was complete; and frequently, we are told, the choice of a suitor depended upon the worth of the girl's outfit.

In Greece it is not customary for sons to marry before all the daughters in the family have been married. Here we find sons helping provide the trousseaux and so speeding the marriage of their sisters.

In mediæval times trousseaux were elaborate and rich. We quote the following description of a bride's outfit from E. L. Urlin's book, "A Short History of Marriage." It concerns the wedding of Edward II to Isabella of France (1308), and though it describes a royal trousseau it reflects the trend of the times. Even the brides of the lower classes, we are told, were given rich and elaborate trousseaux.

She [Isabella] brought two gold crowns ornamented with gems, gold and silver drinking vessels, golden spoons and fifty silver plates. Her dresses were made of gold and silver stuff, velvet and taffetas. She had six dresses of green cloth, six of rose scarlet, and many costly furs. For linen she had 419 yards, and the tapestries for her chamber were elaborate with the arms of England and France woven in gold.

No less elaborate was the trousseau of Lucrezia Borgia. We are told by an eyewitness that "In her wardrobe she had a trimmed dress worth more than fifteen thousand ducats, and two hundred costly shifts, some of which are worth a hundred ducats apiece; the sleeves alone of some of them costing thirty ducats each, being trimmed with gold fringe." Another eyewitness reported to the Duchess Isabella that Lucrezia had one dress worth twenty thousand ducats, and a hat valued at ten thousand.

There are various interesting superstitions concerning the trousseau. One is that if a bit of hand work—even one stitch—is placed by the bride-to-be on every piece that goes into the hope chest, happiness and good fortune will follow her throughout life. Because of this superstition many brides prefer to initial linens themselves, which is something to remember when making gifts.

Another superstition concerns the trying on of a garment belonging in the trousseau before the actual wedding day. There is a widespread belief that to do so will cause unhappiness and disappointment.

White for Purity.—So said the ancients. And they carried out this belief by making it a custom for brides to wear white as an emblem of their purity.

And even before it denoted purity, white denoted joy. The early Romans always wore white on occasions of rejoicing, such as birth and feast days. The white rose was an emblem of joy among the Greeks. And the ancient Patagonians, we are informed, were in the habit of painting their bodies white on every joyous occasion. The whole body was covered with white paint on the eve of the wedding ceremony.

Among various peoples white was not only the colour of purity, but it was considered a sacred colour. The natives of Central Africa, to give one instance, worshipped the white elephant as sacred.

Gradually all people accepted white as the colour denoting purity, and to-day white is considered most acceptable for the bridal gown. To quote "The Book of Etiquette":

From a study of the descriptions of bridal gowns at recent important weddings, we find that white satin is without doubt the favorite material. Crêpe-de-chine and heavy white brocade are also used; and the bride may select whichever material she likes best, something soft and clinging, unless she is inclined to be too slender, when taffeta is more suitable. Undoubtedly, no matter what the style of the gown happens to be, it should boast a train; and a draped

skirt is always a popular wedding mode. The length of the sleeves and skirt is entirely governed by the fashion of the moment.

An excellent description of the bridal party which accompanied Lucrezia Borgia on her wedding day appears in Parsons' "Psychology of Dress." We quote, in part, the following, because it reveals the type of wedding dress of the period and various little customs:

Leaning on the arm of an elderly cavalier dressed in black velvet, with a golden chain about his neck, Lucrezia went as far as the entrance of her palace to greet him. According to the prearranged ceremonial she did not kiss her brothers-in-law, but merely bowed to them, following the French custom. She wore a dress of some white material embroidered in gold, over which was a garment of dark brown velvet trimmed with sable. The sleeves were of white and gold brocade, tight, and barred in the Spanish fashion. Her headdress was of green gauze, with a fine gold band and two rows of pearls. . . . Refreshments were served and Lucrezia distributed small gifts—the work of Roman jewellers—among those present.

Miscellaneous Origins.—Among northern nations of Europe, in ancient times, it was the custom for newly married couples to drink metheglin or mead (a kind of wine made from honey) for a period of thirty days after marriage. Antiquarians say that from this custom grew the term "honey month," or "honeymoon." According to tradition Attila, the Hun, drank so much mead at his wedding feast that he died from the effects of it.

But whether the above origin of "honeymoon" is true or not, we know that in the days of marriage by capture it was necessary for the bridegroom to remain in hiding with his bride until her kinsmen tired of the search for her. And later, when love entered marriage and elopements were frequent, it was necessary for bride and groom to remain in hiding for a while. Both of these "hiding periods" seem to point to possible origins of the honeymoon.

In Luxon it was customary to seclude the bride and groom within the house for a period of ten days. No

one was permitted to enter during this time. Among the Minahassas the newly married couples were secluded for three days and nights; among the Bedui for four days. In Bulgaria they are shut up for a week, during which time they may neither visit others nor receive visitors.

The exact opposite seems to prevail in Java. Here the bride and groom are secluded for forty days *before* the wedding, and during that time they are permitted neither to leave the house nor to perform hard work of any kind. After the wedding ceremony, however, they are expected to come forth from their seclusion and visit all their friends.

The name "bridegroom" was given to the newly married man because among various peoples it was customary for him, on his wedding day, to wait at table on his bride. "Groom" signified one who served in an inferior station. "Bridegroom" signified one who served the bride.

The custom of the bachelor dinner originated in ancient Sparta. It was customary for the Spartan bridegroom to sup with his friends on the eve of the wedding. This was known as the "men's mess."

It is an old custom for brides to wear gloves. In Egyptian hieroglyphics, the glove is the symbol of the hand. The name is TUT, and the word itself signifies to give, to honour. It means also distinction and ceremonial. Because of various ideas associated with the glove and with the hand, it became the custom in early times for the bride to wear gloves at her marriage.

We are told that white paper cut in the shape of gloves was hung up at the doors of houses at Wrexham, in Flintshire (England), as late as the year 1785. A surgeon and apothecary of the place was married to a popular young woman and the paper gloves were souvenirs of their marriage.

There are several old customs based upon the glove. If a man is caught sleeping and is kissed by a woman he is obliged to present her with a pair of gloves. (An old

English custom.) If a man manages to snatch a pair of gloves belonging to a woman, she must forfeit a kiss to retrieve her property. (Practised to a great extent in colonial times.) In early times the glove was also used in challenging. If a man felt that his lady had been insulted, he threw his glove in the insulter's face. This was the symbol or sign of a duel.

The custom of wedding bells originated in England. In mediæval times it was customary for the church bells to peal as the bride entered, and to peal once again as she emerged on the arm of her husband. The custom has survived and is still in use to-day.

Throwing the Bridal Bouquet.—The throwing of the bridal bouquet originated with the old custom of scrambling for the bride's garter. In the early 14th century in France it was considered a lucky thing to win the bride's garter, and everyone rushed for it at the conclusion of the ceremony. Brides wisely left one garter dangling where it could easily be reached, but nevertheless they were often hurt in the scuffle.

So the garter gave way to the stocking, and in the next century we find "stocking-throwing" the favourite bridal custom. But stockings aren't the easiest and most convenient things in the world to remove and cast to one's friends for luck, so some wise bride conceived the idea of throwing her bridal bouquet. The custom has prevailed, and lucky the maiden who catches the bouquet! Tradition says she will be the next to marry.

Everything has its significance. Each little custom that the bride observes links her to the long chain that stretches back across the ages. These customs continue from century to century; and though we sniff at them just the least bit contemptuously, though we say, in our 20th century sophistication, that they are superstitions and don't mean a thing, we know that we wouldn't ignore them for the world! Though we won't admit it, we know perfectly well that June's the month to marry in, and as for the day, well—

Monday for wealth, Tuesday for health,
Wednesday best day o' all;
Thursday for crosses, Friday for losses—
Saturday, no luck at all!

Wedding Superstitions.—"Happy is the bride the sun shines on," the poet sings. But why?

Primitive men recognized the fertilizing power of the sun. They believed, therefore, that the bride who married on a sunny day would be happy, prosperous. In Halmahera, boys were required as part of their initiation to expose themselves to the sun. Among the Hindus the bride was expected to rise early on the day before her marriage and "look into the face of the sun." In Central Asia both bride and groom greeted the rising sun together. If it rained on the day of the marriage, the superstitious people believed it to be a sign of evil, and interpreted it to mean that the wedding would not be happy.

Thus we have the old, old belief immortalized in the lines, "Happy is the bride the sun shines on."

You have probably heard many times the expression "lifting the bride over the doorstep." The bride in ancient Rome was lifted over the threshold, or lightly jumped over it, because it was believed a sign of ill-luck to stumble over it. To prevent stumbling, the bridegroom carried her into the house. The Romans held the threshold sacred to Vesta, the goddess of Virgins.

An old almanac by Andrew Waterman for 1559 furnishes a list of the days "good to marry or contract a wife (for then women will be fond and loving). Among us the fear of Friday is still a common superstition, and there is a marked preference for marriage in June. Superstitions such as these are groundless, yet they persist from generation to generation.

Concerning the Widow.—In primitive life there was a custom called *Levirate* by which the brother or nearest male relative of a man inherited his wife. She was like any other possession, and upon her husband's death she

went to his brother or heir. There are records, comparatively late, of men bequeathing their wives while on the deathbed.

As civilization advanced, customs such as these faded into the background. But even to-day there is a great deal less ceremonial when a widow marries. There is a marked effort to keep the marriage simple and unostentatious. "White is for the girl bride only," the books on etiquette caution. And we are further advised that "When the widow marries, conspicuous display is in very bad taste."

Isn't it barely possible that in early life second marriages were simple and unceremonious because of the fear that elaborate ceremony and celebration would attract the evil spirit of the dead wife or husband? We know that among many savage tribes, when a wife dies in childhood it is believed that she becomes an evil spirit which haunts the home. Accordingly, when a wife dies in this manner, the husband instantly goes through the ceremony of divorce. If he marries again there is little ceremonial.

Our own custom of simple second marriages may have evolved from this primitive fear.

Customs of Divorce.—It is very probable that divorce is as old as marriage. The first divorces were just separations—the man and the woman found they could not be happy together and went their own way; or one or the other may simply have disappeared.

But many early peoples regarded separation after the birth of children shameful. The Iroquois never separated after children were born, nor did the Greenlanders. Among the Maoris, the natives of the Solomon Islands, and in New Guinea divorce is very rare. The Red Karens in Indo-China do not permit divorce if there has been a child. Among the Aztecs marriage was considered a tie that bound the man and woman together for life.

Quite the opposite condition prevailed among other peoples. The Athenians, according to record, permitted

divorce upon the slightest excuse. But it was not permitted without a bill of divorce, specifying the reason. This the magistrate had to see and approve. It was rarely, indeed, that he disapproved. Early law, being made by man, was usually partial to man.

Among the early Romans dislike was considered ample reason for divorce. If a man found that his liking for his wife turned into dislike, he had no difficulty whatever in divorcing her, and remarrying at will.

Many curious systems of divorce prevail. In Tonga a man divorces his wife simply by telling her to go. In Yucatan a man at one time was able to divorce his wife for the merest trifle, and simply by leaving her and not returning. The Aleuts exchanged their wives when they tired of them, for food and clothes. Among the Eskimos there is no definite method of divorce. The man leaves the woman and goes to live by himself in another igloo. After a certain period the people realize that he is divorced, and he is at liberty to marry again whenever he pleases.

A curious custom prevails in Egypt. After a divorce, a man cannot legally take his wife again unless she has been married and divorced by another man. For this purpose it is the custom to employ a poor, ugly, or blind man, called *moostahhill*. He marries the woman, divorces her, and she is remarried by her first husband. We are told that this curious ceremony of marriage, divorce, and remarriage occurs frequently.

Prior to the 7th century an Anglo-Saxon husband could divorce his wife for various insignificant reasons. Walsh enumerates several of them. "A wife might at any time be repudiated on proof of her being barren, deformed, silly, passionate, luxurious, rude, habitually drunk, gluttonous, very garrulous, quarrelsome or abusive." Some of the reasons are not insignificant, of course, but think of divorcing a wife to-day because she is a little rude or quarrelsome!

Divorce was very rare among the North American Indians. They considered the marriage tie inviolable, and the man who left his wife without cause was ordinarily banished from the tribe. According to earliest records, it was disgraceful for a man to have more wives than he was able to maintain; and equally disgraceful for him to fail to maintain properly his wife or wives when he was able to do so. The Indians appear to have had a high sense of honour; they were fair to their women despite the fact that they are credited with having made drudges of them.

Wedding Anniversaries.—During the early periods of Christianity, every possible occasion for celebration or ceremony was seized upon. The wedding anniversary naturally presented itself as an appropriate occasion for merrymaking.

The wedding anniversary of to-day is not so much an occasion for merrymaking as it is for entertaining. Young people usually entertain at a dinner in celebration of their first anniversary; and there is a solemn banquet at the fiftieth. Following are the customary wedding anniversaries as they are accepted by modern society.

The Paper Wedding	First year
The Wooden Wedding	Fifth year
The Tin Wedding	Tenth year
The Leather Wedding	Twelfth year
The Crystal Wedding	Fifteenth year
The China Wedding	Twentieth year
The Silver Wedding	Twenty-fifth year
The Ivory Wedding	Thirtieth year
The Woolen Wedding	Fortieth year
The Silk Wedding	Forty-fifth year
The Golden Wedding	Fiftieth year
The Diamond Wedding	Seventy-fifth year

Through popular custom, the silver and golden wedding have become the two anniversaries that are celebrated more than any others. The anniversaries that come before the quarter-century mark are usually disregarded.

Wedding-lore of Many Lands.—Before leaving the fascinating subject of marriage and of wedding customs, let us glance at some of the lore that has been collected from various lands. Perhaps you will recognize some customs curiously similar to our own.

In Japan the bride is attired in white to typify her purity, and is covered from head to foot with a white veil. This veil is destined to be her shroud. Seated in a palanquin in all her finery, she is carried in gay procession through the town. Her family and friends are in the procession, the men in their dress of ceremony and the women in their richest gold-bordered robes. The spectacle is colourful and picturesque. Sometimes, according to age-old custom, two men run in front waving a red cloth, which is intended to ward off evil influences. In this manner the bride finally reaches the bridegroom's house, where a feast ensues and the bridal equipment is exhibited to the guests. It is customary, in Japan, for the bridegroom to send magnificent gifts to the bride which she gives to her parents in acknowledgment of their kindness to her. The parents in turn provide her with a handsome trousseau which is carried to the home of the bridegroom on the day of the marriage and there displayed.

In China single women always affect the utmost modesty and bashfulness. They seem to have a natural aversion to marriage. Thus, even though the bride may approve of her husband and of the marriage, out of modesty she must pretend that she does not. It is the custom for her to be locked in a sedan chair and the key and chair both consigned to the bridegroom. She is carried in this sedan chair to the home of the bridegroom, her dowry or trousseau accompanying her.

Among the Zulu Kaffirs, if a suitor has about twenty good-sized cows to give to the father of the girl he wishes to wed, he is considered "acceptable." The day is set for the marriage and all necessary arrangements made. On the marriage day, the bride advances with great dignity to

the entrance of the kraal and falls upon her knees to receive from the young man the customary necklace of beads. This he places around her neck, and then raises her to her feet. Now he places a band of white beads, emblematic of his belief in her virginity, around her waist. She enters the hut and remains for a little while alone with him. During these few moments she is expected to decide whether she will take him "for better or for worse." If the decision is favourable she emerges hand-in-hand with him and her friends assembled outside strike up a song of congratulation. Then follows a dance in which everyone participates. If the decision is not favourable, the girl emerges alone, the guests disperse, and the marriage does not take place. But this rarely happens, as the girl who goes as far as receiving the necklace and entering the hut—as the girl who accepts an engagement ring to-day—knows whether or not she wants to marry the man.

In Russia it was formerly the custom for the father to strike his daughter gently with a new whip, and then give the weapon to her husband. It was, and is still, the custom to crown the bride with a garland of wormwood, to imply the bitterness of the married state. The priest sprinkles on her head a handful of hops to make her as fruitful as that plant. This handful of hops corresponds to our handful of rice.

The Italians have many wedding omens. They believe that the most fortunate time for weddings is the middle of June. The bride's dress must be a plain, long white robe; the face must be covered with a veil, and her hair must be crowned with flowers.

Many forms of marriage exist among the Australians. In some tribes traces of barter still remain. A woman is sometimes exchanged for so many silver bracelets or for so much land. Frequently we come across the custom, carried from one tribe to another through intermarriage, of symbolizing service to the future husband. This ap-

pears to be an important part of the marriage ceremony. The woman carries firewood to her lover's hut and builds a fire for him.

This same sort of custom prevailed among various North American Indians. The woman gathered together a small bundle of rods, piled them before the man's tent, built a fire, and made a meal cake for the husband-to-be. His eating of this cake constituted marriage.

The aborigines of Australia still practise abduction and capture of wives. This causes frequent trouble with other native tribes and sometimes results in blood feuds. And travellers tell us that the Australians are still in the habit of offering wives to visitors.

We encounter many such customs of offering wives to visitors, particularly among the South Sea Islanders. O'Brien gives us several instances of such offers made to him during his sojourn in the South Seas. Sometimes the wife was offered for a night, sometimes for his whole stay. Frequently she was the wife or the daughter of the host with whom he lived. To quote one instance from "White Shadows in the South Seas":

When the time came for saying *apae kaoha* my kindly hosts sought to confer upon me the last proof of their friendliness. They proposed that I marry Vanquished Often.

My refusal was incomprehensible to them, and Vanquished Often's happy smile in the moonlight quickly faded to a look of pain and humiliation. They had offered me their highest and most revered expression of hospitality. To refuse it was as uncouth as and as rude as to refuse the Alaskan miner who offers a drink at a public bar.

We cannot resist the temptation to quote from O'Brien's fascinating book this explanation of the kind of marriage that takes place among the Marquesans:

No Marquesan can marry without the consent of his mother, and often she marries him to a girl without his even thinking of such a thing.

A young man may bring home a girl he does not know, perhaps a girl he has seen on the beach in the moonlight, to stay with him that night in his mother's house. It may be that her beauty and

charm will so please his mother that she will call a family council after the two have gone to bed. If the family thinks as the mother does, they determine to marry the young man to that girl, and they do so after this fashion:

Early in the morning, just at dawn, before the young couple awake, all the women of the household arouse them with shrieks. They beat their breasts, cut themselves with shells, crying loudly, *Aue! Aue!* Neighbors rush in to see who has died. The youth and the girl run forth in terror. Then the mother, the grandmother, and all other women of the house chant the praises of the girl, singing her beauty, and wailing that they cannot let her go. They demand with anger that the son shall not let her go. All the neighbours cry with them, *Aue! Aue!* and beat their breasts, until the son, covered with shame, asks the girl to stay.

Then her parents are sent the word, and if they do not object, the girl remains in his house. That is often the manner of Marquesan marriage.

In New Zealand are still found definite traces of marriage by capture. According to the custom of this land, the more a bride kicks, cries, and struggles the more she is applauded by her friends. An eyewitness tells us that "even when all were agreeable, it was the custom for the groom to go with a party and appear to take her away by force, her friends yielding her up only after a feigned struggle." In New Guinea, we are told, the bridegroom carries off the bride or elopes with her, and afterward pays a compensation price to the parents.

Among the Todas and Osages the marriage contract resembles an act of barter. But it is not barter in its true sense. The Osage bride is stripped of her clothes and ornaments, which are made into one pile and carried to the groom's mother as a gift. She receives in exchange clothes and ornaments equally valuable. To conclude this exchange, which is merely a ceremonious custom with no definite significance, a family feast is given. A similar custom is noticed among the Chippewas, whose weddings always terminate in a feast at which gifts are exchanged between the bridegroom and the relatives of the bride. Among the Natchez it was the custom for the bridal pair to eat out of one dish. Later the bridegroom smoked the

calumet, wafting the first fumes toward the parents of his wife and the second fumes toward his own parents, in ceremonious token of the alliance.

The Malay bridegroom is expected to remain under the roof and eye of his mother-in-law for a period of two years. After the expiration of that period he is permitted to remove with his wife to a house of his own. It is only then that he is considered actually married.

A glimpse at the marriage customs existing in Ceram reveals a bit of rare wisdom existing in the marriage compact. One reads, "What the husband wishes the wife must wish, and what the wife wishes, the husband must also wish; and let them not forget their parents." An excellent piece of matrimonial advice!

A curious custom is noticed in Uganda. After the marriage day the bride is permitted to remain idle for a full month. At the end of the month her relatives bring her a gift in the form of food. When the food has been entirely consumed, the bride begins housekeeping.

In Albania, which is a tiny country in the southeast of Europe, fire is regarded as one of life's sacred symbols. Therefore fire plays a large part in the marriage ceremonies. Wives are still abducted by the Albanians, and when a wife is "captured" she is taken to his home and placed before the fireplace. A huge fire is built and the girl is given a large pair of fire tongs. For three full days she is obliged to stand beside the fireplace, her head bowed, her hands grasping the fire tongs. She may not speak. She may not rest. Whatever food or drink she is given is brought to her. At the end of this ordeal she is considered married and she takes her place in the household. We are told that among the Albanians a heavy belt takes the place of our wedding ring. It is placed around the waist of the bride, after the three-day ordeal, and is preserved by her throughout life. Recent travellers in this faraway land tell us that even when a bride and groom are married at church by a priest, they go through this

age-old ceremonial of the country and do not consider themselves actually married until they have done so.

There is probably no sect or class of people throughout the civilized world who use so little pomp and ceremony in their marriage customs as the Quakers. These people use no oaths. They have no elaborate feasting, no complex or complicated rites. They simply make assertion before witnesses that they will live together, and so they do.

No matter where our fancy may lead us, no matter with what people we may wander, we find interesting rites and customs based upon the old, old institution of marriage. In Spain we meet the *duenna* and her charge coming to meet the bridegroom promised in infancy. In the East we find sanctified prostitution; we see instances of legalized polygamy. We meet the girls of pleasure at Venice. We come upon a picturesque Tartar wedding. We walk in the shadow of a Turkish harem. We watch the dancing girls at Cairo. All age-old customs of the people. All the heritage of the centuries that have slipped from the shoulders of Life.

But we, who are concerned solely with the customs that relate to us in our daily life, must resist the great temptation to wander along the highways and byways of the Old World, glimpsing the customs of yesterday as they blend with the customs of to-day. Fancy, if we permitted it, would lead us into an intricate maze of facts, fears, superstitions, from which it would be difficult to escape.

And so we leave it here, recognizing with Sigmund Freud that "The man of prehistoric times lives on, unchanged, in our Unconscious."

CHAPTER IX

GIFT-MAKING

The friendly and flowing savage, who is he? Is he waiting for civilization, or is he past it, and mastering it? —WALT WHITMAN.

Every human being has two personalities: an archaic, primitive, child-like, unadapted personality, and a modern, sophisticated, adult, and to all appearances, adapted personality. —ANDRÉ TRIDON.

PRIMITIVE REASONS FOR GIFT-MAKING

SO simply and naturally has gift-making slipped into our scheme of things that we scarcely recognize its presence. Yet, like most human proclivities, it has a primitive background that reaches far back into antiquity.

From the very earliest periods, gift-making has existed in some form or other. Our savage ancestors made gifts habitually. But gift-giving in primitive life did not grow out of any thought or idea connected with generosity. It was not based upon the simple desire to give, or to please. There were other more selfish reasons, born of the circumstances and conditions of life in which early man found himself.

We know that primitive man was selfish. He was unutterably superstitious. He feared and distrusted strangers. He scorned the weak; he cringed before the strong. The conditions of his life made him so. And these conditions, as we shall presently see, gave fundamental reason for the custom of gift-making.

Whatever impulses primitive man may have had to share his possessions, or to make a gift of something which he would have preferred to keep for himself, grew out of fear. We can be pretty certain from what we know of the primitive nature that early man would not have

parted with anything he wanted, unless he was afraid. It was usually some external condition, threatening his safety and well-being, that prompted the making of a gift. The whole principle of sacrifice in religious systems is based on this theory.

To Appease the Anger of the Gods.—There was probably nothing that primitive man feared more than the elements. He feared them because he could not understand them. } The lightning ripping suddenly out of the sky and across the earth; the thunder rumbling angrily through the heavens; the wind tearing through the jungle in fury—all filled him with an overwhelming fear.

{ He did not reason that these were natural elements and that nothing he could possibly do would in any way affect them. He tried to control the wind and the rain by magic. He shot at the storm with his arrows. He chased the wind and shouted at the thunder. And when all his efforts failed, his fear increased. }

What had he done to anger the gods? For surely the gods had sent these demons to punish him.

Out of this thought grew the idea of making gifts and sacrifices to the gods to appease their anger. } Great mounds of earth were piled high and on them placed the offerings of the tribe. Sometimes food was the gift offered, and it was burned so that its fragrance might waft into the heavens and reach the nostrils of the gods.

So great a hold did this idea of gift-making to appease the anger of the gods take upon the primitive mind that even children were sacrificed. We are told that thousands of infants were sacrificed yearly to Moloch, hideous ox-headed god of the savage Phœnicians. The people gladly gave their children to the gods in return for safety, plenty, comfort.

Gifts to the Dead.—Early men feared the dead. Among some primitive peoples we find prevalent the thought that the dead send the thunder and the lightning. Among others we find the belief that the spirits of the dead haunt

the homes of the living. Naturally, in his superstitious dread of those who were lifeless, primitive man gladly gave food and valuables as gifts, to keep the spirits happy.

(According to primitive reasoning, a spirit to whom gifts have been given will not do harm or injury to the giver.)

Thus we find that, even in earliest times, it was a custom to bury with the dead valuable tribal possessions, great gifts of food, even clothing and implements. Of course, many people had the idea that the dead lived on in another world, and they buried food and necessities with the body so that the person who had died would not be in want on the journey. Nevertheless, it was a widespread belief that the dead could cause injury to the living, and we cannot fail to see that the element of fear must have entered into gift-making to the dead.)

The Ahts bury gifts of blankets with their dead. The ancient Egyptians had precious ornaments and rich furniture buried with the men who died. The horse of a North American Indian was usually buried with him. Among the Comanches, when a man died it was customary to bury his favourite wife with him. Countless similar customs abound in savage life; and we cannot escape the fact that behind all these customs lurks the fear that perhaps the spirit will return to claim its possessions. And perhaps, in its anger, it will do injury to the living.

Therefore, among savage peoples, not only are the favourite belongings of the dead buried with them, but additional gifts are included to impress the spirits and keep them from haunting the spot.

Gifts to the Kings.—From gift-making to placate the angry gods and to appease the spirits of the dead, it would have been just a step to gift-making among the living. Kings must have been the recipients of gifts at a very early period.

We can imagine a tribesman making a gift of food or of implements to the tribal chief to win his esteem, and thus his protection. We can imagine a savage fellow

sacrificing some treasured trinket to the Strong Man of the tribe, or the Wise Man, because of fear.

But more than all, we can imagine the people placing gifts at the feet of the king to insure happiness and prosperity for themselves. If they wanted sunshine and good weather, they probably sent a dozen sheep to the king. If they wanted a good harvest, they probably presented him with rare, costly skins and ornaments. If there was a famine, they possibly brought all their belongings in one great gift to win his approval and thus banish the curse of the famine.

Among many peoples, notably the early Egyptians, the king was considered a man-god with full control over the elements and the destinies of his people. Gifts would very naturally have suggested themselves to the people as a logical way to win the favour of the king, and thus be assured of peace and plenty. And in times of drought or famine, gifts would be made to appease the king, even as they were made to appease the gods in times of storm.

The Egyptians made great gifts to their kings. Others emulated the example thus set, and it became a widespread custom to make gifts to kings at various stated intervals. The Israelites, we are told, gave a tenth of all their grain, their wine, their cattle to the king. Others made gifts of pearls and fabrics, of gold, of sacred animals.

The custom of making gifts to kings spread everywhere, and even Christianity failed to wipe it out. Ambassadors, visiting foreign countries, brought valuable gifts to the regents. Kings visiting one another exchanged gifts. We are told that Queen Elizabeth received thousands upon thousands of gifts from her subjects at New Year. And even to-day, do we not hear frequently of gifts made to persons of power—our own President, for instance?

There is no doubt whatever that, no matter what other circumstances or purposes may have induced the making of the gift, there lurked behind it the unconscious desire to win the friendship of the person of power to suit one's own

ends—even as the weak man of the primitive tribe made a gift to the tribal Strong Man in the desire to gain his friendship and protection.

The Bible gives expression to this thought. "A gift doth blind the eyes of the wise" (Deuteronomy, XVI, 19)—meaning, of course, that it is easy to obtain what one wants if one distributes gifts judiciously.

Ceremonious Aspect of Gift-making.—Among many peoples, the making of a gift became a sort of ceremony. We must realize that a gift meant far more to primitive man than it does to us. When he parted with a choice bearskin, or with a particularly sharp flint spear, he felt that he was parting with something akin to himself. In other words, he felt that the gift was actually a part of him.

Thus the exchange of gifts in primitive culture came to be a common way of ceremoniously binding two persons together. When the Dasuns of North Borneo exchanged weapons they were sworn friends. In central Celebes, even to-day, the exchange of gifts denotes lifelong friendship. In Baru the mere interchange of gifts is recognized as a ceremony for establishing friendship.

We are told that an elaborate etiquette exists among chiefs in Patagonia. One chief is prevented from entering the *toldo* of another until gifts have been exchanged.

In New Guinea the natives exchange slight gifts with visitors as a sign of friendship. In Tonga gifts are made to new arrivals, to visitors, to natives who have been away and returned. The Ceramese habitually make ceremonious friendship by exchanging gifts. The Greek host and guest, records tells us, broke a die, each keeping half in token of their friendship.

Travellers, coming in contact with strange peoples, habitually propitiate them by gifts. Two results are achieved. Gratification caused by the worth of the thing given tends to beget a friendly mood in the person approached; and there is a tacit expression of the donor's desire to please, which has a like effect. It is from the last of these that gift-making as a ceremony proceeds.

We can understand how, in primitive life, the ceremonious exchange of gifts would have been a symbol of peace and friendship (see p. 150). It has retained this character to the present day. We do not make gifts to people we dislike, as a rule. And we feel always a little more friendly toward the person who has made a gift to us. Though the exchange of gifts is no longer accompanied by ceremony—like building a huge fire among the Africans, or like smoking the calumet among the Indians—we still have certain forms of ceremonious survival. The banquet at which a loving-cup is presented, the graduation exercises at which the diplomas are presented, the military exercises at which medals are presented—all these are examples.

Gifts in Warfare.—Gift-making was a common method of settling disputes and making peace in early times. Among many African tribes, when peace was declared between two tribes, each tribe would contribute a gift of food, and a peace feasting would take place. Here we have two symbols of friendship—eating food together and exchanging gifts.

Among North American Indians it was a common custom for the chiefs to exchange gifts after a war. It was only after the exchange of gifts that the calumet was passed around.

Some peoples, upon making peace, required that the offending tribe or village send a gift to show their friendliness. Thus, when two villages in the New Hebrides culminate a term of warfare, peace cannot be declared until a gift is received by whichever village considers itself to have been in the right. The gift is usually in the form of pigs.

Gifts Become Obligatory.—"It is proof of great thought to separate thought from habit," says Cicero.

Spencer, in his "Studies in Sociology" (vol. III), separates thought from habit in gift-making. He tells us how little by little gifts which were at one time voluntary and one-sided, growing out of the first crude thoughts of man, became obligatory, reciprocal, habitual.

At first primitive man would have made a gift to the Strong Man or the Wise Man because he wanted to do so, because he felt safer and more secure after having done so. But later the Strong Man or the Wise Man would expect gifts, and if he did not receive them he would make it uncomfortable for the other fellow. Thus gift-making became, in a sense, obligatory, habitual. And it is only natural that the weak should have been the donors, the strong the recipients.

Early man made gifts to the tribal chief, to the gods, to the king, because he was afraid of what the chief, or the gods, or the king might do. Modern man very frequently makes gifts because he is afraid of what people will say.

With the ceremonious exchange of gifts to denote peace and friendship, gift-making became reciprocal. If a chief sent a dozen pigs to the chief in the next village, he expected a gift in return. If he didn't receive it, he very probably declared war upon that village. In certain sections of New Guinea, even to-day, visitors are expected to return trifles of some sort to the natives who present them with gifts, if they wish to be secure from harm during their stay.

Vanity undoubtedly enters, to some extent, into the exchange of gifts. One chief would like to feel that he can make as rich and impressive a gift as the other. To-day we do not like to feel that the Christmas gift we have received is more attractive and impressive than the one we sent.

GIFTS IN COURTSHIP AND MARRIAGE

Who knows what lover first stole through the night to leave a gift where his sweetheart slept? Perhaps a string of bear claws, perhaps a curious shell from the sea, perhaps a soft, warm skin—to tell his tale of love.

And who knows what maiden first fashioned a vessel that her lover might drink from the spring? Or fashioned a

bag from the hide of some beast that he might carry his flints with convenience?

But all these fascinating sidelights are behind the pages of history; we cannot be certain whether or not they are true. However, we can be reasonably certain that gift-making between the sexes began when love began, and we know that love illumined some of the early pages in the book of life.

We can see, of course, why the exchange of gifts would have entered into courtship at an early period. One of the quickest and simplest ways to win a person's favour is to present him, or her, with a gift. There is a feeling of gratification. An attitude of friendliness is created.

This thought possibly took a strong hold upon the primitive mind, for among various peoples we find the mere exchange of gifts constituting the entire marriage ceremony. The acceptance of the gift by the woman implies the acceptance of the man. This type of marriage ceremony exists even to-day among the Khakyens.

Among the North American Indians, when a young man wished to court a young woman he made gifts, not to her, but to her parents. The gifts were usually blankets, a belt of wampum, a bracelet, etc. If the gifts were accepted by the parents, the betrothal was sanctioned. This is a form of modified marriage by purchase.

The same sort of custom prevails to a certain extent among the Japanese. The sending of specified gifts by the man to the parents of the woman constitutes an important part of the ceremony. Once the gifts have been received and accepted, the contract is considered complete. Neither party is at liberty to withdraw.

In Greece lovers courted their sweethearts with rich gifts. Flowers were a favourite gift from the man to the woman. We are told that the doors of some maidens were always banked high with flowers from their suitors.

The flower seems to be a widespread emblem or token of love. O'Brien relates this fanciful tale of love and the flower among the Marquesans in the South Seas:

If a man seeks a woman, he wears a white flower over his ear, and if his love grows ardent, he wears a red rose or hibiscus. But if he tires, he puts some green thing in their place. *Bon dieu!* That is the depth of ignominy for the woman scorned. I remember one girl who was made light of that way in church. She stayed a day hidden in the hills weeping, and then she threw herself from a cliff.

The Polynesian woman in love wears a red hibiscus behind her ear. As a rule, it is given her by her lover.

Flowers make acceptable betrothal gifts to-day. "The Book of Etiquette" says:

Expensive gifts should never be exchanged during an engagement, barring, of course, the engagement ring. The young man may present his prospective bride with books, flowers, or candy, but articles of wearing apparel are considered bad taste.

Friends of the bride-to-be are advised that they may send her, with their congratulations,

Pleasing bits of chinaware, glassware, and sometimes even silver. Odd pieces of bric-a-brac and quaint, unusual gifts and antiques are always acceptable. Markings on gifts are usually in the maiden name of the bride, but if any doubt be felt as to which she would prefer, it is best to ask her.

The Wedding Gift.—The exchange of gifts has always played a conspicuous part in marriage. For many generations it has been the custom in Sweden for the girl who is betrothed to be married to make a shirt as a wedding gift for her husband. He wears it on his marriage day, puts it away, and wears it again when he is buried. This seems to correspond with the custom of the bridal veil (see p. 242). If his wife dies first and he re-marries, custom demands that he burn the shirt on the eve of the second wedding.

In Java, when a woman marries she throws aside all her dolls and childish trinkets which are preserved for just this purpose. A fire is built and the trinkets thrown into it, in evidence of her determination to become a woman. The friends who have assembled for this ceremony of burning the childhood possessions congratulate the bride-

to-be and make several valuable gifts to recompense her for the things she has destroyed.

An exchange of gifts among the Aru Islanders constitutes marriage. The same is true of many other savage tribes. The man usually presents the girl with some trinket or ornament; she usually makes with her own hands something he can wear or use for decoration. A Timorese woman can bestow no greater mark of attachment upon her lover than to present him with something she herself has worn—a flower, a pin, a comb.

It is surprising that among certain peoples marriage is not considered complete until the bride and groom have exchanged gifts. There is a Kaffir custom, for instance, which prevents the bride from eating the food of the bridegroom's kraal "until her presents have arrived." As eating from the kraal constitutes marriage, we can see how important gifts are to the savage mind.

In South Celebes the marriage gifts between a bride and groom are very numerous. The favourite gift of the groom is a pair of ginger roots which have grown in the earth together. To the natives the "twin" ginger root is symbolic of marriage—the close union of man and wife.

It is still a modern custom for the bride and groom to exchange gifts before marriage. Somehow the very exchange of gifts seems to draw them closer. Though few realize it, and fewer still would admit it, the gift which the groom gives to his bride bears trace of the old form of marriage by purchase. He is more certain that the woman "belongs" to him when she wears his diamond wrist watch or his diamond lavallière. The thought exists in his subconscious primitive mind; it is there if he will search for it. "The man of prehistoric times lives on, unchanged, in our Unconscious."

As for the woman, who will deny that she does not have an instinctive sense of possession as she knits for her lover a tie, or purchases for him a wallet? We cannot escape it. We all have our share of the primitive person-

ality; and though the mode of life has changed with the passing generations, the primitive instincts and impulses remain.

Gifts of the Guests.—Among the early Dutch, as among other early peoples, it was the custom to present the newly married couple with gifts of utility, and so start them out in life. The custom of presenting wedding gifts is to-day firmly established in our social code and “everyone who receives an invitation is expected to send the bride a gift.”

The savage tribes of Africa and of Australia are in the habit of making gifts of food to the newly married pair. Among the early Anglo-Saxons a rich spice cake was considered an appropriate gift from a wedding guest. In Colonial America the governor presented the newly married couple with a certain amount of grain and flour. Food, being a prime factor in the business of living, has always suggested itself as a sensible and appropriate gift.

But in modern times, among civilized peoples, food holds a place of lesser importance, because it is ordinarily available to everyone.

The wedding gift is the prettiest and most useful article within one's means. China and silver are always appropriate, and cut glass, linen, books and even checks or gold pieces are most acceptable.

It is interesting to note that people of the upper classes threw goldpieces to the peasant bride and groom when Europe was young; that concealing goldpieces on the person of the bride was part of the marriage ceremony among certain North American Indians; and that there are even to-day, in Mexico, people who cast money to the bride and groom.

There is a slight prejudice against giving money as a present at a wedding or at any other time [says “The Book of Etiquette”] but one has only to see the joy that the bride and groom get out of spending the money over and over again before they finally do spend it to have this prejudice dispelled.

Silver and linen are usually marked with the initials of the bride, more often than not with the initials of her maiden name. If there is any doubt as to which she prefers and one is not able to find out indirectly, it is permissible to ask her.

Gifts should always be accompanied by the cards of the donors, but these should be removed when they are on display.

The custom of displaying gifts, however, is falling into disuse. People of better taste object to this old custom which has been handed down to them from an earlier and less conservative generation. It was once the universal custom to display all gifts on the day of the marriage; royalty and peasantry alike practised the custom. It crossed the ocean to the United States and prevailed for a while in fashionable society. But it is practically obsolete to-day.

Perhaps it was out of this distaste for publicly displaying wedding gifts that the idea of the private Trousseau Tea evolved. The bride-to-be simply invites her most intimate young women friends to her home, and tea is served informally. The gifts, and the trousseau if she likes, are on display in an adjoining room so that her friends may see them. But after the tea the gifts are packed away and are not "on display" to any one who may call.

OTHER KINDS OF GIFTS

In early life, gift-making among the sexes was regulated with great precision. Certain gifts were tabu to the woman; others were tabu to the man. As we advance in the social scale, we find that the same sort of regulation in gift-making exists between the various castes or classes.

For instance, among the Israelites it was the custom to give a tenth of the grain and wine and cattle to the king. Among the Egyptians, only the finest fabrics and the most elaborately wrought ewers might be presented to the king. Among various African tribes, only a pure white elephant made an acceptable gift to the chieftain. Even in religious sacrifice, which is a form of gift-making to the gods, definite animals or articles are specified.

Very possibly the custom of making gifts at definite times grew out of the custom of making gifts of a definite

kind. For instance, in early Rome it was the custom for the people to carry small trinkets as gifts to the senators under whose protection they found themselves. It became a definite custom to present definite gifts to the senators. But when? Naturally, a definite time had to be arranged to avoid confusion and to make the little ceremony of gift-making impressive and effective.

The New Year's Gift.—The Romans decided upon the first day of the new year as an appropriate time to make their presentations to the senators. And it has been the custom ever since for friends to exchange gifts on New Year's Day.

Let us see why this day was chosen. There are two possible explanations. In the first place, New Year's Day was a time of celebration and thus a propitious time to make gifts. But perhaps the main reason for making gifts at this time was to invite protection from the senators during the ensuing year.

Suetonius and Tacitus both mention the custom of making gifts on New Year's Day. Claudius made it a law that presents could actually be demanded on this day, but on no other day during the year. According to the records that have come down to us, the gifts were usually trinkets of some sort—the fancy of the moment, no doubt—although there are some instances of exquisite fabrics and of wearing apparel being presented to men in high office. There are also instances of gifts of flowers and fruit, usually in pretty baskets.

The Romans who settled in Britain introduced to their neighbours the custom of making gifts on New Year's Day. It became the custom among the early English to clean the chimney on this day so that luck could descend and remain all year. Among us, instead of "cleaning the chimney" we "clean the slate," and make good resolutions for the following year. Perhaps this custom of cleaning the chimney so that good luck might descend has something to do with the Santa Claus myth. Surely Santa Claus with his pack of gifts brings "good luck" to the household!

From Britain the custom of making gifts on New Year's Day spread all over Europe. In Spain and in France the habit took firm hold. Even in faraway Persia it became the custom to exchange eggs as gifts on New Year's Day. Here we see another significance: The beginning of life, of creation, is symbolized by the egg. New Year's Day is the beginning, or creation, of a new year. Thus, it seemed to the Persians, no gift could be more appropriate at this time than the gift of eggs. The same significance is seen in our gift of coloured eggs to children at Easter-time.

History records that during the reign of Queen Elizabeth the custom of presenting New Year's gifts was carried to great extremes. Gifts of extravagant value were presented to the Queen, and the people made many gifts among themselves.

One authority tells us that not the least valuable of the gifts which the Queen received was a pair of black silk knit stockings. Such stockings were rare, indeed. Until that time the Queen had worn cloth hose. But the gift so delighted her that she vowed never to wear cloth hose again. Nor did she!

It was during this period of extravagant gift-making that gloves became a popular New Year's gift. Like the inevitable box of candy of modern life, the pair of gloves became the obvious gift when one was unable to make another selection.

The Christmas Gift.—With us, the New Year's gift is not quite as popular as the Christmas gift. Everyone—except a Scrooge—exchanges gifts at Christmas-time.

It was a custom among the Romans for the priest to put a box on all outgoing ships. The people were required to put something into it—a gift in the form of a trinket or a piece of money. It was known as the Priest's Box.

When the ship was ready to sail, the box was sealed and went to sea with it. Among the Scotch and the Irish it was a custom to throw a shoe after the ship to insure its

safe return; perhaps this Priest's Box was intended to serve the same purpose.

But authorities tell us that when the ship returned the box was given to the Priest; it was placed aside until Christmas, at which time mass was said and it was opened. Sometimes the money was kept by the church; sometimes it was distributed among the poor. It is related that frequently, at the opening of the Priest Box—which later became known as the Christmas Box—those who had not placed anything in it came forward and offered gifts in the form of money or jewellery. The purpose was to supplicate the saints and win forgiveness for sins. If the truth be known, it is for very much the same reason that Christmas gifts are often exchanged to-day. We feel a little better, a little more self-sacrificing, a little nobler when we have made others happy through gifts.

During the early period of Christianity it was the custom for poor men and women to sing carols in the streets at Christmas-time. They would be given food, clothing, and money not because it was of the carols they sang, most likely, but because it was the custom to do so. And custom, among superstitious peoples, is sacred. They were afraid that evil would befall them if they did not make gifts to the singers who carolled Christ's praise.

Another custom was for men who were skilled in carpentry to make miniature reproductions of the Christ child in the stable. Some really remarkable reproductions were made, showing the cradle, Mary, the Child, even the Wise Men bringing their gifts. There are several such reproductions still in existence.

The makers paraded the streets at Christmas showing their handiwork to the people. They even went into homes to show their "cradles," as they were called. If by any chance some clever fellow had added a new little twist—such as painting the whole thing or illumining it in some way—he was surrounded by an admiring crowd who carried him around in triumph. If he were as clever an

actor as he was a carpenter he could make the superstitious people believe that he was a prophet—divinely inspired. And his gifts were rich accordingly!

The exchange of gifts at Christmas-time possibly grew out of the desire to emulate the amazing unselfishness of Christ. In later life, of course, the exchange of gifts would have become traditional, customary. And a certain joyousness, induced by the exchange of gifts and the merry-making accompanying it, inspired a genuine generosity.

The custom was nurtured in Germany. Here it became the habit to make periodic exchange of gifts among friends, relatives, acquaintances. It became an obligation, and to escape it the man with many friends sometimes took a trip abroad at this period.

From Germany, the custom of Christmas gift-making spread over Europe. It crossed the sea and was brought to the struggling colonists who had tried to cut loose from all the Old-World influences. It has become more and more an institution, as the generations have slipped by, and to-day we exchange gifts at Christmas as a matter of course.

Gifts to Children.—We know from actual records that gift-making to children goes far back into prehistory. There are at various museums actual dolls, animals, and other toys which have been taken out of the long buried tombs of infants.

Love of offspring appears to have been prevalent even in primitive times, despite the records of infanticide. The Fijians, famous for cannibalism and savagery, are greatly attached to their children, and the children to their parents. The Tongans and New Zealanders are said to be extremely fond of, and kind to, their children. Among the Greenlanders, passed by in the march of civilization, the bonds of parental love seem stronger than with almost any other people.

We can very easily picture a savage father of long ago bringing a curious shell for his child to play with. We can

see a savage mother carefully whittling a flint or bone toy that her child might have something with which to be amused. Among these primitive peoples, marriage was not considered binding until a child was born. The birth of the child, therefore, must have been an occasion of great celebration, and perhaps all the clansmen or tribesmen presented gifts to the new-born child. It would have been a ceremony—to show the child he was welcome and among friends.

But as we have said, there are actual records to prove that gift-making to children existed at an early date. It is not necessary to peer behind the unknown and try to fathom the primitive mind.

Painted clay puppets—some in the form of humans, some in the form of animals—were given to early Egyptian children as playthings. We know that these were toys, and not amulets or fetishes, for they are found only in the tombs of infants or young children. (See illustrations.) There have also been found in the tombs of Egyptian children small wooden carts, houses, and ships. An ancient Egyptian ball is in existence which has small stones inside of it, so that when one shakes it, it rattles. This was probably the forerunner of the rattle as we know it to-day.

The early Romans had a method of adoption in which the birth of the child was simulated. The man who adopted the child gave it rich gifts, to prove that he was able to take care of it.

In ancient Greece a great ceremony took place on the tenth day after the birth of the child. A feast was given by the parents—the purpose, we are told, was to imply the father's acknowledgment of the child's legitimacy—and the friends and relatives who were invited brought toys of metal or clay for the infant. The mother was presented with rich painted vases.

Gifts have always accompanied christenings. During the Middle Ages the child was usually presented by its

godparents with silver or gold spoons. It is very possible that the phrase "born with a silver spoon in his mouth" arose from this old custom.

The custom of presenting the children with gifts at Christmas was most pronounced among the Germans in early life. *Kris Kringle* is their name for Santa Claus. It is derived from *Krist Kindli* which means Christ Child. We can understand why the holiday would have been recognized as being particularly a child's holiday.

Saint Nicholas, or Santa Claus, is regarded as the patron saint of Christmas. The old nursery myth is that he comes down the chimney with a pack on his back to leave gifts for good children.

It is possible that this myth originated with the custom of cleaning the chimney at the beginning of the new year to enable good luck to enter the household (see p. 280). A housewife, busy cleaning the chimney at about the Christmas period, might have whispered to her children, to keep them out of mischief, that if they were good Santa Claus would come down the chimney and bring gifts for them. Tremendously impressed, the children would have hurried with the news to their little friends. And so it would have spread, becoming finally the popular nursery myth that it is to-day.

CHAPTER X

CORRESPONDENCE, AND THE HISTORY OF WRITING

As the art of writing and reading spread, came that old desire, that pathetic desire so common among human beings, to astonish some strange and remote person by writing down something striking, some secret one knew, some strange thought, or even one's name, so that long after one had gone one's way, it might strike upon the sight and mind of another reader. Even in Sumeria men scratched on walls, and all that remains to us of the ancient world, its rocks, its buildings, is plastered thickly with the names and the boasting of those foremost among human advertisers, its kings.

—H. G. WELLS.

THE BEGINNING OF WRITTEN RECORDS

THE communicating of facts, thoughts, ideas, or fancies through writing belongs to an advanced stratum of development.

We know that the world has had a long, dim history which has been left practically unrecorded. We know that it has had an intermediate history which has bequeathed to us a wealth of material relics, but still no written records of what man thought or felt. The third great period of social development, of which we to-day are a part, is illumined by the invention of writing and its astonishing development. We can scarcely conceive of the tremendous influence which writing, and its sister art, printing, have had upon human affairs.

Of course, we cannot be certain when writing began, any more than we can be certain when speech began, or faith, or art, or any other human quality which is based upon long ages of development. Not even the historian can definitely tell us when writing began. Nor can the archæologist go back any farther than the records which he understands.

We can only *guess* that some early dreamer sat on the bank of a river and with experimental twig or finger made curious, fanciful patterns in the wet clay. We can only *guess* that some Palæolithic caveman, drawing bears and buffalos on the wall of his cave was attempting to express some crude thought that crowded through his mind—a thought lost to us for ever. We can only *guess* that infant systems of writing lie buried with forgotten civilisations, and that at some future time they may yet be discovered.

But let us see what we do know about the origin of writing and the first written records of mankind. We know that before any genuine sort of writing made its appearance, a kind of picture writing existed. The North American Indians appear to have been highly advanced in this art. Examples of their picture writing show us how even the most elaborate messages could be conveyed through this simple means.

Picture writing is merely a system of conveying thoughts or facts through pictures. There is in use in Europe to-day a timetable which has small black signs or pictures on it for the purpose of guiding tourists. A tiny cup on this timetable indicates a place where refreshments may be had. Various other signs indicate things of importance to the traveller.

This simple and elementary method of conveying ideas constituted the first kind of writing. It existed among the early Egyptians, the early Babylonians, the Chinese, the American Indians. It exists to-day among savage and untaught people all over the world. It is the simplest, crudest, and most elementary way of recording ideas. It bears the same relation to writing as gesture and imitative sound bear to speech (see p. 126).

At first picture writing was a device rather than a system. It helped man express his ideas, not only to his fellows but to himself. He devised the method of drawing pictures for his own convenience and satisfaction.

There could have been no attempt, at this early stage, to create a definite system. That would have come later. At first each picture would represent one thought in itself. The person who saw the picture would be obliged to supply by imagination what was lacking. We are inclined to believe that there is a long train of thoughts and ideas behind every crude drawing found on the walls of Palæolithic caves.

Systems of Complex Picture Writing.—But gradually, as picture writing developed, it grew into a system of signs for expressing ideas; that is, two or more pictures were combined into what we call “words” to express, not one simple idea, but a trend of thought. The Chinese to this day employ this type of “pictographic writing.”

A form of complex picture writing is found in Egypt. It is familiarly known as hieroglyphic writing, and many excellent specimens are to be found on monuments, mummy cloths, temple walls, etc. Photographs of hieroglyphic writing are reproduced on these pages.

Another form of hieroglyphic writing which existed in Egypt and which was used by the priests is known as hieratic writing. It is much simpler and the characters take on a flowing form, like our script. This type of writing was used in letters, in the keeping of accounts, the writing of psalms, deeds, etc. The hieroglyphic writing was used on the monuments and the temples, and wherever a decorative effect was required.

The Egyptian hieroglyphic writing is one of the finest survivals of picture writing we have. Some monumental examples date back almost to 5000 B.C. The discovery of the Rosetta stone by the French engineers attached to Napoleon’s expedition to Egypt in 1799 was the master key to the reading of this hieroglyphic writing.

While the Egyptians were developing their kind of picture writing, still another kind was developing among the Babylonians. At first these people had a crude and primitive picture writing which shows signs of having

Drawing of the inscription on the statue of Goddess Sekhmet in the Metropolitan Museum of Art. A fine specimen of hieroglyphic writing.

emerged, very possibly, out of hieroglyphic writing. Ex-

isting specimens in no case show more than half-a-dozen lines.

The now famous cuneiform writing (from Latin, *cuneus*, a wedge) replaced the simple picture writing of the Babylonians. It was invented by a people known as the Sumerians. They used the pictures to represent sounds apart from ideas—the first people to do this. With a wedge-formed implement they wrote first on stone, later on clay.

This cuneiform writing of the Sumerians spread with amazing rapidity. It was adopted by the Babylonians and by them passed on to the Assyrians. The latter simplified some of the characters and conventionalized many. Its influence passed even to Egypt and hieroglyphic writing ceased to be simply pictographic; it became a sound-sign system. This method of writing became widespread; it was used as a means of correspondence among most of the Mediterranean peoples, and as far inland as the Persian Gulf.

The word "cuneiform" was used for the first time in 1700 by Thomas Hyde, well-known as a professor of Hebrew in the University of Oxford. The term has found general acceptance among historians. But another familiar and popular name for this type of writing is "arrow-head writing."

The Origin of Alphabetic Writing.—It is to the eternal glory of the Phœnicians that they invented alphabetic writing.

The word "alphabet" itself is from the Greek names for the first two letters, "a" and "b"—*alpha* and *beta*. But the Phœnician alphabet existed long before the Greeks attempted to write their traditions and their mythology for record.

Cuneiform writing was, of course, the great impetus that led to the origin of the Phœnician alphabet. The Egyptians, the Babylonians, the Assyrians, and other peoples were using a method of writing whereby articulate

sounds were being represented to the eye by complex forms and figures. But we can understand how unwieldy this system of writing must have been. It did not lend itself to ordinary or extensive use; it was cumbersome and complicated.

The Phœnicians took the one feature of Egyptian writing which could be universally applied, disentangled it from the jumbled mass of signs and pictures, made of it a unit, and created therefrom a system, or method, of writing based upon an alphabet. They achieved the greatest step forward in the art of writing.

Because of its obvious simplicity and its universal application, this form of alphabetic writing quickly spread. It was carried everywhere. It spread over the whole Asiatic continent. It found its way to Crete, to Thera, to Greece, to Italy. It passed on into Europe and firmly established itself there. It became, in a word, the writing system of the whole civilized world.

Early Writing Materials.—Before proceeding with the further development of writing, as it concerns correspondence, let us glance at the materials which were being used. With what did early man write? And on what did he record his thoughts, his ideas?

Sculptured records on stone are, of course, the earliest records we have. Much of the literature of the old civilization was written on clay baked into stone. Photographic examples are given.

When portable manuscripts became desirable, many materials were pressed into service. The skins of animals, the leaves of plants, linen, fragments of tile—all were used. There is a charming Pompeian wall painting which shows a girl holding a double tablet of clay in her hand, her "pencil" to her chin as though she is pondering. She is evidently writing a love letter.

For writing on clay tablets a slender, four-sided piece of wood was used. It was a forerunner of our pencil.

The ancient Egyptians wrote chiefly on linen or wood

with a brush or reed pen. But for literary work, for official documents and for the "Book of the Dead" they used papyrus. The papyrus is a tall, graceful plant, the pith of which was pressed flat and thin and joined with others to form strips. On these strips of papyrus records were written and painted. Fragile though it may seem papyrus

is very enduring and there is a piece in existence which is said to date back to 3500 B.C. Some priceless records, indeed, are preserved for all time on the papyrus pages of Egypt's literature.

The use of papyrus descended to the Greeks and Romans. From its name comes our word "paper"; and from the "roll" or *volumen* of papyrus manuscript comes our word "volume" as applied to a book.

The Greeks and Romans wrote upon papyrus, which

A beautiful old Greek vase, figured. The exterior shows three women preparing wine to serve.

they burnished with a polishing stone, with a reed cut to a point. This reed writing instrument was very similar to our pen. They used an ink made from cuttlefish. The early scribes were well-equipped to write enduring records of the things they did, and thought, and felt, and wondered about.

The Greeks originally followed the example of the Phœnicians and wrote from right to left. But later the priests decided to write the oracles in the opposite direction, because they believed that the direction toward the right was of good omen. They reformed the habit of writing, and originated the custom of writing from left to right. We still observe this custom, or habit, and undoubtedly always will.

It is interesting to note the antiquity of carrying the pen or pencil behind the ear. We notice the following passage in the life of S. Odo: "He who saw a pen sticking above his ear, in the manner of a writer." By the 7th century feather pens were common, and double inkstands, for red and black ink, were being used.

The First Books.—With language, alphabet, and materials, with reasoning faculties and imagination, man was beginning to write of the things that interested him. The long pent-up desire for self-expression found outlet in crude attempts to write down the thoughts and ideas that crowded through his mind. There was born the overwhelming wish to tell, to confide, to record, to astonish. Man became distinctly conscious of his own imaginative and creative faculties; he found keen pleasure in writing down, as far as he was able, the traditions which formerly he had orally related.

The influence of writing upon human thought cannot be estimated. Man's experiences no longer died with him, unless he so desired. He was able to record his thoughts and his secrets. He was able to communicate those thoughts to men hundreds of miles away. He was able to share his own knowledge, and share in the knowledge

of others. Slowly, gradually, surely, writing exerted its magic influence upon the mind of man, and priceless treasures of knowledge were being stored for us who were fortunate enough to come at a later day.

But we must not imagine that the full benefits of writing were flashed all at once upon a waiting world. At first writing was a slow and painful process. Books were written word for word by the author, and his copy was the only copy. There was no way of multiplying it, except by

A monk of the 10th century laboriously copying word for word the text of the Bible. This was the only way of multiplying the number of books.

copying it all over again. Naturally, such books were rare and costly.

And we must remember that the book must at first have been a sort of mystery to the ordinary person. Only the priest and the student understood it. For a long time the benefits of writing were denied the world as a whole; but with the discovery of paper a tremendous stride was taken.

Concerning the great impetus to thought which writing had upon mankind, H. G. Wells says:

From the first writings onward, a new sort of tradition, an enduring and immortal tradition, began in the minds of men. Life, through mankind, grew thereafter more and more distinctly conscious of itself and its world. It is a thin streak of intellectual growth we trace in history, at first in a world of tumultuous ignorance and forgetfulness; it is like a mere line of light coming through the chink in an opening door into a darkened room; but slowly it widens, it grows. At last came a time in the history of Europe when the door, at the push of the printer, began to open more rapidly. Knowledge flared up, and as it flared, it ceased to be the privilege of a favoured minority.

The Discovery of Paper.—Papyrus, of course, was a form of paper. But the supply of papyrus was limited. It had to be fastened strip by strip, and there was neither a uniform size nor quality. Learned men, eager to set down and record their thoughts and experiences, began to dream of better materials and easier methods of writing.

Paper as we know it originated in China. It was in use as early as the 2d century B.C., but it was not until the 8th century A.D. that the secret of making it was learned from the Chinese. During an encounter with the Arab Moslems several Chinese who were skilled paper-makers were taken, and they taught the art to the Arabs. Paper manufacture flourished in Arabia from the 9th century onward. But it was not until close to the 14th century that really good paper was made in Europe, Italy leading in its manufacture.

Origin and Development of Printing.—Now we come to one of the most fascinating phases of human development—the discovery of the printing press and its effect upon the world. It must have been like the rise of a glorious new sun. What one read before, thousands were now able to share. What was once the privilege of a few became the property of all. Schoolbooks were cheapened and placed within the reach of everyone. Mankind entered upon a new intellectual era.

You can see the immediate result, of course. As the books now being made were easier to read, simpler to understand, infinitely cheaper to buy, more people began to

read. Quickly the art of printing spread. Quickly books were multiplied. And quickly the firebrand set intellectual flames burning brightly all over Europe.

At first an abundance of Bibles made their appearance. Then the first great European literatures began. Language lost a great deal of its dialect; it became polished, literary. More and more books made their appearance; they became still easier to read, still less like the student's mystery they once had been. And the world read.

The first printing from movable type appears to have been achieved by Coster in Haarlem (Holland) at about 1445. At about the same period the famous Gutenberg was printing at Mainz. Almost simultaneously printers began to turn out books in Italy and when, in 1477, Caxton set up his press in Westminster, printing was established as a new and remarkably useful art.

Like all other great advances, printing permeated the social fabric and its influence coloured the lives of the people. In all the great ages, or stages, of development, intercommunication was the great impetus toward the strengthening of the social life of the multitudes.

Gesture, the very first kind of intercommunication, made two savage fellows friendly when they might otherwise have fallen upon each other. Speech separated man for ever from the lower animals; it bound men together in common intercourse. And it brought into being the storyteller, the myth-maker, the wanderer from clan to clan, from tribe to tribe, from people to people, carrying the folk tales and traditions wherever he went. Writing, as a means of intercommunication, broadened the intellectual horizon, made it possible for man to share his thoughts with another many miles away, made it possible for him to record his experiences to entertain or enlighten others.

Printing made mass thought possible. It set the mind of mankind free. It placed knowledge within the reach of the lower classes. It enabled one part of Europe to know what the other part was doing, saying, thinking,

planning. It gave to all of mankind a better, clearer, saner knowledge of itself and of the world.

To the present generation, printing is no longer the marvel, the astonishing achievement, it seemed to earlier peoples. Like so many other of the good things of life, it is simply accepted. Yet printing has, directly and indirectly, done more to change the manners and customs of man than any other one development. Out of printing grew advertising, and advertising is subtly, surely, inevitably changing the mass mode of living. Advertising seeks out the most remote corners of the globe, discovers what is needed by the people there, and supplies the demand. It turns its searchlight upon the smallest town, the tiniest community, and tells the people there precisely what the woman in the metropolis is wearing, doing, saying, how she is entertaining, where she is going.

With this influence constantly and increasingly at work, it is inevitable that many age-old traditions be at last discarded—or at least changed sufficiently to accord with the new order of things as portrayed in the advertising pages. No history could give to posterity a clearer knowledge of our daily life and our customs of living than the advertising pages of our modern newspapers and magazines. They are a precise record of what we are doing and wearing; how we are entertaining; what we are using—*what we want*.

We cannot leave the subject of intercommunication and its influence upon the manners and customs of man without mentioning the moving pictures. They, too, have changed to a certain degree the mode of living. When the slum girl is able to see how her millionaire sister lives, and when the millionaire girl is able to see how her slum sister lives, there is bound to be a reaction of some sort. But the influence of the moving pictures has, as yet, scarcely been felt. It will be the pleasant task of some later writer to record the effect of the moving pictures upon mass life.

The telephone, the telegraph, the radio, the wireless—all are modes of intercommunication. But they are merely

like links in the great chain of intellectual progress set free by the printing press.

THE SOCIAL INVITATION

Writing very early became a device for making social affairs run more smoothly. Writing in the sense of books, newspapers, records, stories is one thing; writing in the sense of social correspondence, invitations, cards of greeting, congratulation, and condolence is quite another.

The North American Indians were among the first to use actual invitations. They burned their message on buckskin and sent it by a runner to the person for whom it was intended. Tribes also had a smoke message which they used to call their people together for purposes of feasting, celebrating, etc. This smoke message was used sometimes in warfare.

It appears that among the Indians, ever a hospitable people, the development of the invitation was rapid and marked. Long before 1600 the Algonquins were sending out "dinner invitations" in the form of specially cut blocks of wood about the size of the little finger. All those who received the bit of wood with its curious picture message knew that they were invited to attend the feast and celebration being given by the Algonquins. They came from far and wide to join the merrymaking.

Among early European peoples the invitation developed slowly. The peasantry, of course, had no need for any such thing as an invitation; if one of their number wished to celebrate at the public bar or in his home, he merely called all his friends together with as much proud noise as he could command. Among the upper classes a private messenger was sent to give the information orally.

By the time of Shakespeare the invitation had reached a fairly high point of development. The mode of the written invitation first found favour at court and then spread to the people in the cities. These invitations were

written on huge sheets of white paper, by hand, the initial letters usually made by stamp and decorated with colour.

"So many guests invite as here are writ," says Shakespeare. The invitations were carried by pages or messengers to the homes of the people for whom they were intended, and usually an answer was required, in the manner of our acknowledgment.

The development of the wedding invitation was particularly marked. In small villages the wedding bells ringing sweetly from the church belfry were the only invitation. All the friends and neighbours gathered together to greet the bridal party. But in large towns and cities it became necessary to invite by written word those who were to attend the wedding ceremonies.

The following rare old invitation, written in 1786, was clipped by William Hone from a Cumberland (England) newspaper and incorporated by him in his famous "Table Book." Here is an exact reproduction of the invitation:

INVITATION

Suspend for one day your cares and your labours,
And come to this wedding, kind friends and good
neighbours.

Notice is hereby given that the marriage
of Isaac Pearson with Frances Atkinson will be
solemnized in due form in the parish church of
Lamplugh, in Cumberland, on Tuesday next, the 30th
of May inst. (1786); immediately after which the
bride and bridegroom with their attendants will
proceed to Lonefoot, in the said parish, where
the nuptials will be celebrated by a variety of
rural entertainments.

Then come one and all,
At Hymen's soft call.

From Whitehaven, Workington, Harington, Dean,
Hail, Ponsonby, Blaing, and all places between;
From Egremont, Cockermouth, Barton, St. Bee's,
Cint, Kinnyside, Calder and parts such as these;
And the country at large may flock in if they please.

Such sports there will be as have seldom been seen,
 Such wrestling and fencing, and dancing between,
 And races for prizes, for frolic and fun
 By horses and asses and dogs will be run,
 That you'll go home happy—as sure as a gun.
 In a word, such a wedding can ne'er fail to please;
 For the sports of Olympus were trifles to these.

Nota Bene—You'll please observe that the day
 Of this grand bridal pomp is the thirtieth of May,
 When 'tis hoped that the sun, to enliven the sight,
 Like the flambeau of Hymen, will deign to burn bright.

This specimen of an 18th-century wedding invitation is doubly valuable. Not only does it reveal to us the kind of wedding invitations that were being written and publicly printed in those days, but it gives us an excellent picture of the kind of weddings that were then in vogue. Can you imagine races by dogs and horses at the modern marriage? Can you imagine fencing and wrestling and the "country at large" flocking in?

Compare the above invitation with this example of the correct invitation of to-day:

Mr. and Mrs. John Grey Taylor
 request the honour of your presence
 at the marriage of their daughter
 Helen Marie
 and
 Mr. Raymond Mitchell
 on Friday, the fourth of June
 at six o'clock
 at the Presbyterian Church
 Boston

The custom of posting invitations did not come until comparatively late. Not because posting was unknown—a royal post system existed even in ancient Persia. But for a long time a popular superstition made it an insult to send an invitation any other way than by personal messenger. But gradually this superstition passed out of favour, and soon everyone who entertained was posting

invitations—recognizing this as a simple expedient toward getting guests together.

Ceremonial Announcements.—When anything of importance happens the natural impulse is to announce it to everyone. If we are unhappy, we want others to know of, and share in, that unhappiness. If we are joyous or proud, we want others to know of it, and be joyous or envious according to the circumstances.

To announce a death, the Singhalese, even in earliest times, sent out a lock of hair cut from the head of the dead and twisted around a small stick, the whole wrapped in a leaf or bit of cloth. Our announcement card, with its black border, is fundamentally the same in purpose.

In Uganda it has been the custom for ages to announce births and deaths by the boom-boom-boom of the war drums. A certain number of beats announce a birth; an entirely different number and variety of beats announce a death.

People everywhere, since early times, have had ways and means of announcing to others the things that interested them. The festive dance of the Indians is a method of announcing a wedding, just as it is a method of celebrating it. The crêpe on the door is a method of announcing death.

Writing, to a large extent, did away with pantomimic and dramatic forms of announcement. The transition was slow and gradual, of course, and many of the dramatic survivals are still noticeable in modern life. But slowly, surely, the written announcement gained its foothold and has been in social use ever since.

To-day cards are sent to friends and relatives to announce the birth of a child. Cards of announcement are issued by the bride's parents to those who have not been invited to the wedding. Mourning cards are issued upon the death of a member of the family. These written announcements are social devices pure and simple; they expedite the social affairs of the family.

Letter-writing.—In the development of social life it became necessary to write notes of congratulation, sympathy, appreciation. The receipt of a card of announcement would require some sort of acknowledgment. Each age has had its needs, and always those needs have been supplied.

The development of the art of letter-writing is a fascinating study in itself, and a fair discussion of it would fill a book. It was born in very early times but was confined at first to students, priests, and learned men. It followed painfully in the wake of writing, and received its greatest impetus with the discovery of a good and cheap paper. It was nurtured in France and England; it was developed to its highest point of development in the 17th and 18th centuries. It entered social life and found a peculiar place for itself in the heart of the hostess. It swept with a flourish through the 19th century. It waned perceptibly with the discovery of the telephone, the telegraph. But it still holds an important place in the social scheme.

On a certain occasion Lord Chesterfield's son sent some Arquebusade water to his aunt. She sent him a letter of thanks and enclosed in it a letter from the Lord. In this letter, Lord Chesterfield gave a draught of a letter which he recommended that his son write in answer to the aunt. To avoid hurting his feelings, he wrote:

I hope you will not be offended at my offering you my assistance upon this occasion; because I presume that, as yet, you are not much used to write to ladies.

A propos of letter-writing, the best models that you can form yourself upon are Cicero, Cardinal d'Ossat, Madame Sévigné and Comte Bussy Rebutin. Cicero's Epistles to Atticus and his familiar friends are the best examples that you can imitate, in the friendly and familiar style. The simplicity and the clearness of Cardinal d'Ossat's letters show how letters of business ought to be written; no affected turns, no attempts at wit, to obscure or perplex the matter, which is always clearly and plainly stated, as business always should be.

For gay and amusing letters, for *enjouement* and *badinage*, there are none that equal Comte Bussey's and Madame Sévigné's. They

are so natural that they seem to be the extempore conversations of two people of wit, rather than letters which are commonly studied, though they ought not to be so.

I would advise you to let that book be one in your itinerant library; it will both amuse and inform you. I have not time to add any more now, so good-night.

To Lord Chesterfield's excellent advice we will add a word more. If you wish to learn not only a crisp, excellent style for letter-writing, if you wish to glean a wealth of valuable anecdotes, witticisms, paradoxes, for use in conversation, by all means read and *study* Lord Chesterfield's letters to his son. But do not pattern yourself after him or after any one else. Remember this paragraph from "The Book of Etiquette":

Letters should be written *personally*—that is, they should represent the sender. Be sure, first, that you know exactly what you want to say and how you want to say it. Then put it down on paper as though you were speaking; make no pretense at being so very highly educated that you must use flowery language and poetical phrases. Simplicity in wording and in form is the most effective and graceful method. It is a greater mark of learning and intelligence to write a simple, ably expressed, cordial letter, than to write one that shows an obvious effort to cover, by extravagant and highly figurative language, the reserve and dignity that are the foundation of all good breeding.

Concerning the Salutation.—Forms of salutation in letter-writing were originated to a very great extent in France, although some forms of salutation originated in the English court.

For a long time the only form of salutation used in letter-writing was "God keep you!" or its equivalent. The use of "Your humble servant" first came into use in England at the marriage of Queen Mary, daughter of Henry IV of France. It was derived from *Votre très humble serviteur*.

Such forms as "Your obedient servant" and "Your humble servant" are still used in letters of importance. In 16th-century France they were used by everyone; no other form was used. That the English still have sur-

vivals of this salutation emphasizes the importance with which French manners and customs were regarded by the social world.

Much etiquette concerns the salutations in letters to royalty. Garrick Mallery, in an article which appeared some time ago in the *American Anthropologist*, says:

A private person writing to royalty used the largest sheet of paper procurable and only four written lines at the bottom of the first page could be used to commence the communication, the remainder of the page being left blank after the form title, which should be distributed through at least five lines. Six lines of the epistle to a prince might appear on the first page, and so on in graduation. Wars have been occasioned by the breach of this etiquette. The enmity between Cardinal Richelieu and the Duke of Buckingham arose because his haughty eminence addressed the Duke without leaving any space open after the title of Monsieur, which insult his Grace returned in the same paper-sparing manner.

At this period France was making the social laws for all Europe. Madame de Genlis records that "all men, even princes of the blood, must place the word 'respect' in letters written to any woman." The English copied this form of courtesy, and both French and English still use to-day such phrases as "respectful homage" and "respectful regard." Our phrase "respectfully yours" appears to have been borrowed from them.

The etiquette of correspondence is very much simpler in the United States than it is anywhere else.

There are two distinct forms of the social letters—the formal and the informal [says "The Book of Etiquette"]. The formal social note is used only for invitations, announcements, and their respective acknowledgments. It is always written in the third person, and always requires an answer. The informal note has no definite formula, except that it can be generally compared to all the informal trend of correct social usage.

Whether formal or informal, the social note always bears the name of the person to whom it is addressed. When writing socially to Mrs. Joselyn, for instance, one does not use the expression "Dear Madam," but "Dear

Mrs. Joselyn." The form "my dear" is considered a trifle more formal than just "dear," although in England the reverse is true. "Dear Madam" and "Dear Sir" are forms reserved exclusively for use with business letters.

In closing the letters, the forms "Very truly yours" and "Yours truly" express a certain formality. Friendly letters are closed with such expressions as "Yours most sincerely," "Cordially yours," "Very affectionately yours." The pronoun "yours" should not be omitted as it leaves the phrase unfinished and is not complimentary to the person addressed.

Flowery forms have entirely disappeared from correct letter writing, and a dignified simplicity prevails instead.

Crests and Monograms.—Elaborate crests, seals, and monograms were at one time considered an essential part of social correspondence. Fashionable stationery to-day bears neither crest nor seals; and the monogram if used at all, is simple and inconspicuous.

"The monogram," says Symmachus, "is a name set forth in an abbreviated form, and so compacted by certain inter-twinings of the letters as to be more easily understood than read."

The Greeks are supposed by most authorities to have been the first to use monograms. Beautiful combinations of letters are to be found on old Greek coins; and elaborate seals and monograms are found on ancient rings. The Romans, copyists of the Greeks in almost everything else, adopted the device of monograms. They were possibly the first, however, to use monograms to express family names. As one writer says, "Greece was the seed-ground of arts, but it was in Rome that they flowered."

The early kings of France and emperors of Germany used monograms because they were not able to write, and their signatures were required on documents. Eginbard, the biographer of Charlemagne, tells us that this was precisely the case with the great ruler. He was unable to write, so he had a monogram made and he used it whenever his signature was required.

King Theodoric (A.D. 493–526) was extremely illiterate, according to all accounts of him. He was unable to write his name and therefore unable to sign his edicts. Because of this he had a plate made of gold, perforated with the letters of his signature. He used this as a stencil and traced his initials through it. In this manner only was he able to sign his documents.

The early French kings, it appears, did not always sign their court documents or write their monograms themselves. They had secretaries to perform this duty. There are in existence several rare old characters which bear the words "The King orders his monogram (*nominis karakter*) to be written under it." And sure enough, there under it appears the King's monogram, carefully sealed or stamped by the secretary. William I, the Norman Conqueror of England, made use of just such a device to sign his documents.

The French kings invariably used black ink in the stamping or drawing of their monograms. The exception to this rule, however, is Charles the Bald who was not only King of France but Emperor of Germany. The documents of Germany he signed in vermilion, and they were countersigned in black by the Chancellor.

The Saxon kings not only signed with a monogram, but added a cross to make their signatures still more sacred. One writer tells us that they diluted the ink with the wine of the Eucharist.

During the 15th and 16th centuries the use of monograms became general. Merchants began to adopt them as signs or trademarks. They found their way into social life and were used on stationery. "Monograms came to mean to the middle classes what the coat-of-arms meant to nobility."

There are many examples of 16th-century monograms in existence. They are interesting and beautiful. They are based, with few exceptions, upon Gothic forms; some are grotesque, some indistinct and scarcely readable, some charming and truly artistic.

Crests are quite as old as monograms. But while monograms developed largely because of the illiteracy of persons whose signatures were important, crests grew out of vanity and the love of symbols.

From the earliest times men have used emblems to indicate their nationality. The Egyptians carried images of bulls and crocodiles into battle. Each of the twelve tribes of Israel had its special ensign. The Indians of British Columbia had crests of their totem poles, usually in the form of a frog, or wolf, or eagle. The subjects of Demiramis adopted doves and pigeons as their emblems. They selected the dove in deference to their queen whose name meant "dove."

Athens used, as its public sign, an owl. This was a compliment to Minerva. Carthage used a horse's head; Corinth, a winged horse; Persia, the sun; Rome, an eagle. All peoples appear to have used some sign, some symbol, to distinguish themselves from others. These symbols were the original crests.

As a form of ostentation and vanity, the crest is quickly falling into disuse, except with royalty. The monogram, however, is still in good taste and may be used on social stationery. To quote "The Book of Etiquette":

The monogram should be decorative without being elaborate. It should be placed in the centre at the top of the page when no address is given. It should be omitted entirely when the address appears at the top of the page. The space occupied by a monogram should not cover more than the approximate circumference of a silver dime. A monogram is usually stamped in black, dark green, or dark blue. Vivid colours must be avoided.

The most correct stationery to-day bears simply the address engraved in Gothic or Roman lettering in the upper centre of note and letter sheets and on the reverse side of the envelope.

CHAPTER XI

CALLING CUSTOMS

Let us respect the ancient manners and recollect that, if the true soul of chivalry has died among us, with it all that is good in society has died.
—GLADSTONE.

Since custom is the principal magistrate of man's life, let men by all means endeavour to obtain good customs.
—LORD BACON.

HOW CALLS ORIGINATED

IN early life there could have been no regular visiting, no established calling customs. The condition of life would have been too uncertain, too hazardous, for any such thing.

Mankind must have been fairly well advanced in the social scale before the idea of visiting his neighbours even occurred to him. At first he would have been suspicious and distrustful of any attempts toward friendliness. He would have avoided his neighbours as they avoided him. He would have been satisfied simply with his cave home for shelter, his meat and his fruits for food, his woman for companionship. The first primitive existence must have been absolutely devoid of any sort of social element.

But as we follow in the footsteps of man, painfully and slowly developing, we see that it was by a series of very natural steps that the custom of calling grew in his life. With the use of spears and flint implements to kill beasts, man was able to supply himself with an abundance of food. With his cave well filled with food he was not afraid to welcome some wandering fellow and sit with him under the stars. His attitude toward his neighbours changed. He had plenty of food and they had plenty of food. Why need they fear one another?

And so we find them joining one another as they sit silently before the fire. First it would be just one fellow, coming over timidly and making known by gesture his desire to be friendly. Then another would wander close in his loneliness. They would discover that it was good to gather thus in company. The fire was warm and bright; the stars winked like thousands of tiny eyes; the trees whispered softly, and far away some beast howled to the sky. Man moved closer. Like called out to like, and a slumbering social instinct was awakened.

Then came speech and its great influence upon the life of man. Speech meant coöperation. It meant exchange of thoughts and experiences. It meant binding together of man to man in the common desire to express hopes, joys, sorrows, fears. It meant a great impetus to the social instinct.

Story-tellers and myth-makers followed in the wake of speech. And there evolved the need for an audience.

And so it continued through long ages of development, one custom growing up out of another, mankind gradually being drawn closer and closer in a social fabric that has patterned itself with all the human instincts. Not the least of these instincts is the desire to be respected and admired by one's neighbours, to be a person of worth and importance. Out of this instinct, undoubtedly, came the custom of making and returning ceremonious calls.

The First Calls.—It is always at a point like this that fancy tempts us, and we feel strongly the urge to wander along forgotten ways and poke curiously into the unknown.

Could not some primitive mother have called upon a neighbour mother to show her round, fat baby? Could not some savage youth, ages and ages ago, have called upon some other youth to match his skill and strength?

Visits, we are told, began among the ancient Israelites. The rabbis visited one another constantly for the purpose of sharing their wisdom. And they visited the people to teach, to comfort the sick, to console the bereaved. They

wandered among the Egyptians with their custom of making calls, and the Egyptians copied the fashion.

But even before this time, which, after all, was a period of early civilization, men were making calls upon one another; but these calls were intrinsically of a homage-paying nature. As has been noted in a previous chapter, early men made gifts to the Strong Man, the Wise Man, the tribal gods, the kings, to win their approval and hence their protection (see pp. 270-271). Making a gift necessarily meant going to the person for whom it was intended.

We can see how, by association, the very act of coming came to be looked upon as a mark of homage and respect. Eventually it would have acquired the character of a reverential ceremony, and a man would call upon a superior for the same reason that he presented him with gifts.

The early tribesman, for instance, would have come personally with his gift for the tribal chief, to see that he received it and no one else. Gradually it would have become the established or traditional custom in the tribe to call upon the chief at stated, definite intervals, to do him homage.

We saw how presents which were once voluntary and entirely one-sided gradually became obligatory and reciprocal (see p. 273). In the same manner the custom of ceremonious visiting became gradually obligatory and reciprocal.

To Make the Marriage Bargain.—Simultaneously with this ceremonious and reverential type of visiting there was developing an entirely different kind of visiting which had nothing whatever to do with homage. It concerned marriage bargains and the settlement of marriage prices.

Thus, when a man had a daughter for whom he wished to receive a dozen or so of his neighbour's pigs, he called upon the neighbour and indicated to him his willingness to make the exchange. If the neighbour were agreeable, the bride price was settled and the marriage celebration planned.

Or, if a man had a son of marriageable age he probably called upon his neighbour and discussed with him the benefits to be derived from a union between that son and the neighbour's daughter.

The custom of calling grew out of such natural steps as these in the development of man. When it became necessary to call upon his neighbour, he called upon him. When there was absolutely no reason for calling, he didn't.

Visits between Kin.—Possibly the first visits made for the purpose of the simple pleasure to be derived from them were the visits between kin. We can imagine a young bride returning to her own clan or tribe to visit her mother. We can imagine the mother visiting her son who lives with his wife in another hut. These visits would not have been ceremonious in the least. They would have been simple calls for the sake of seeing the person from whom one has been separated.

Yet we can see how, out of this custom of calling upon kin, grew the more general custom of visiting one's friends and neighbours. Perhaps two old mothers, whose children were all married and far away, called upon each other frequently to find sympathy and solace in each other's company. Perhaps two old men, no longer able to fight or work, called upon each other to relate brave tales of their youth, of their lost strength, of their one-time skill in the hunt.

This form of simple, unceremonious visiting between kin and between friends, gradually exerted its influence upon peoples everywhere. It found a foothold for itself in the social scheme and it has maintained that foothold ever since. We call it the "informal call." But it means simply the friendly little visit that one neighbour makes upon another.

Caste, and Calling Customs.—It is inevitable that caste should have entered the custom of calling at an early period. One tribal chief would feel that the other ought to call upon him first. One class of people would feel that

another class ought to do them homage. It has always been so, for man has always been conceited.

In early life conquered chiefs were obliged to do homage to the new chief. When we read of a certain conquered people of ancient Peru, for instance, we notice that the chiefs were "ordered to reside at the court of Cuzco during certain months of the year." This was regarded as a fitting way to do homage.

You remember the story of Charlemagne. He not only forced subject kings to remain in his presence and so indicate their subservience to him, but he actually forced them to serve him at table.

In feudal Europe vassals were obliged to make periodical visits to their suzerains, to show their subjugation to them. The suzerains, in turn, were obliged to make visits to the lords. And the lords were obliged to do homage to the king. So was visiting a method of showing respect and homage between the castes.

Where caste exists, visiting becomes ceremonious. It cannot be the friendly or "informal" visiting that exists among equals. Thus caste affects the calling customs of many countries. In the Orient, where there are many castes, "ceremonial visits are regulated with great precision." The same is true in India. In England there were at one time about fifty classes or castes of people before reaching the commoner, and the visits of all these castes were carefully regulated. In France and in Spain matters of precedence relating to diplomatic calls at court appear to have been of great moment and sometimes occasioned actual battles (see p. 109).

We have not escaped, even to-day, the influence of caste in our calling customs. Concerning the first call—that is, asking a new acquaintance to call—"The Book of Etiquette" says:

You cannot, except under special conditions, invite people to your home unless you have called on them in formal manner and they have returned the visit. A young woman, and an unmarried woman, wait for an invitation to call from an older woman and matron. It

is not advisable for a young woman to ask a gentleman to call until she has met him several times. . . . A married woman does not leave a card for an unmarried man. . . . It is expected of a young matron or of a *débutante* that she request being permitted to call upon an elderly matron or an old lady after the two have met at a watering-place or in the home of a mutual friend, and after having exchanged cards, etc., etc.

Then there is the matter of the first call which "is often a very delicate matter. Frequently sensitive people are offended by some unconscious slight on the part of a friend." We are told that an unmarried woman must always pay the first call of the season upon a matron. The bride does not make the first call, but waits until her friends and neighbours have called upon her. The elder of two women is always entitled to the first visit.

Rules such as these, which are to be found in every book on etiquette, prove without a vestige of a doubt that caste consciousness still exists among us, although in greatly modified form.

Calls of Condolence and Congratulation.—We cannot be certain when the custom of making calls upon friends or neighbours for the purpose of sympathizing with them or congratulating them originated. The custom is very probably an old one. We know that in ancient Greece neighbours and friends gathered together on the tenth day after the birth of a child to congratulate the parents and present gifts. Other peoples must have had similar customs.

That calls of condolence are of great antiquity we can be reasonably certain. In the face of death we are all afraid, and it is but a human instinct to sympathize with those who have felt death's hand.

Calls of condolence existed in ancient China. Confucius says:

Generally guests who come to condole are first saluted by kneeling toward them and knocking the head on the ground to manifest one's grief. However, the process of knocking the head on the ground before bowing to the guests is a more expressive manner of showing

grief, and I prefer the latter way in cases where mourning lasts for three years.

In China to-day condoling visitors bring mock money which is buried with the dead. There are elaborate funeral repasts, attended by relatives and friends.

Among the Irish it has for generations been the custom to call at the home of death and sit for hours with the bereaved. There are drinking, feasting and chatting, for all the world as though it were a social function.

Civilization brings understanding and kindness, and to-day "when the call of condolence is made ten days or two weeks after the funeral, the intimate friends of the family should be careful to avoid all subjects that would cause pain. The call should be brief. It is poor form to remain longer than fifteen minutes unless one is a particularly intimate friend."

The Ceremonious Calls of Modern Life.—The ceremonious call is quickly becoming obsolete. With the minuet and the high handshake, it belongs to yesterday. But distinct traces of the ceremonious type of visiting still prevail and are to be found in our modern life.

The "at-home" day, for instance, is a survival.

There was a time when fashionable districts of New York were divided into regular sections wherein on a given day in the week a whole neighbourhood was "at home." Ladies in visiting dress, with trains and bonnets and tight gloves, carrying card cases, tripped into this house, out of that, and again into another.

During the heyday of the "at-home" call, huge quantities of visiting cards were left at every house. The number of cards was regulated with precision and care. These calls were not based upon civility or friendliness. Visiting, under this system, was purely a ceremony.

Both card-leaving and the "at home" are to-day practically obsolete, though our so-called "duty calls" are a survival. For instance, two weeks after having been entertained at a formal dinner one is expected to call and leave cards. When one is notified of a death, one is expected

to call and leave cards. A bride in a new neighbourhood expects her neighbours to call and leave cards. Every book on etiquette has a list of these obligatory calls. They cannot very well be regarded as friendly or informal; they are more or less ceremonious.

The morning call was at one time a very popular social institution. It appears to have been a remote but distinct sequence of that system under which subordinates were required to call from time to time and show loyalty to their superiors. It existed principally in court systems under which courtiers were required to present themselves at stated intervals to do homage to the king.

In the 17th century, for instance, in the empire of Mogul,

All those that are at Court are obliged, under a considerable penalty, to come twice every day to salute the King in the assembly, once about ten or eleven o'clock in the morning when he renders justice; and the second time about six hours at night.

The morning call, which is now practically obsolete, but which still exists in Washington and in certain small towns, appears to be a survival. Persons of lesser rank in the social scheme call upon their superiors before noon any day except Sunday, and leave cards to show they have been there. It is another way of "doing homage."

In the United States caste consciousness is not as pronounced as it is abroad, and the call is a social pleasure rather than a social device. The only calls that still carry with them a flavour of ceremoniousness are those previously enumerated, concerning condolence, congratulation, inquiry, etc.

The Informal Call.—During the early periods of Christianity it was the custom of neighbours to call upon one another at Christmas, New Year, and other important holidays. Ricard tells us that "everyone called upon everyone else" exchanging the good wishes of the season.

When the Dutch came to settle in New York they brought with them the custom of making friendly, informal

New Year calls. This custom has remained with us, and to-day the New Year call is usually one of the jolliest and most delightful of the season.

When visitors call informally it is customary to serve refreshments of some sort. Usually tea and cake are served to callers in the afternoon. In Manila native fruits are offered the visitor. In New Mexico the customary refreshment, when they are in season, is piñon nuts. In Sicily liquor is served the guest.

The phrase for hospitality in the Society and Sandwich Islands is, "Let us eat together." These people are most hospitable and they will share their last bit of food with a guest.

In Japan calls are usually made in the morning. Dainties are served to the guests on white paper—confectionery and little cakes, ordinarily—and they are eaten with chopsticks. What he cannot eat the visitor carefully folds in the paper and deposits in his pocket sleeve to carry away with him.

Among most peoples, eating together is the greatest sign of hospitality, and to refuse to eat with a host is regarded as a serious insult. Among us, a hostess dislikes to be refused the cup of tea or the dainties she offers.

"The Book of Etiquette" is partial to the friendly informal call and recommends it to those who want to entertain simply and unostentatiously. It says in part:

If you feel that, because you are not fortunate enough to own a pretentious dwelling and to hire impressive butlers and maidservants to welcome your guests, you should not make calls and have them returned, you are depriving yourself of a pleasure infinitely greater than all elaborate display and ostentation. Simple, informal calls made for the purpose of creating and developing friendships, and made with a feeling of genuine cordiality and friendliness, are even more gratifying than the stiffly formal social calls.

Do not feel that you are obeying etiquette's decrees when you neglect your friendships merely because your home and facilities do not warrant extensive social intercourse. True etiquette is universal in its appeal and reaches the country woman in her little cottage as directly as it reaches the stately dowager in her city mansion.

The ceremonious call of the 19th Century, now practically obsolete. This type of call was a survival of the homage calls of early life.

Origin of the Visiting Card.—Early peoples, calling upon one another, always felt that it was polite to announce their arrival beforehand. They felt that the owners ought to be warned of their approach.

We can see the origin of this, of course. Earlier in the

Primitive man placed a bit of carved rock at the entrance to a cave. If it were taken in, he knew he was welcome; if it remained untouched, he hurried away. We use a bit of inscribed pasteboard—the visiting card.

stage of social development, when one tribe approached another it would not know at first whether the approach were hostile or friendly. But if that tribe announced its approach, it must naturally be friendly. Otherwise it would approach silently, secretly, to steal upon them un-

awares. Through obvious association, it became a form of early politeness to make known one's approach.

Thus in Australia, before coming within a mile of the fires of the natives of another village, it is customary to announce the approach by loud "cooeys." In other sections of Australia it is the custom, when one tribe approaches another in peace, to carry burning sticks.

A Blackfellow would not think of breaking in suddenly upon the privacy of the horde he is about to visit. He warns them of his arrival by building a fire a little distance off. Several peoples, in widely separated parts of the world, use this method of making known their approach.

Among the ancient Israelites it was considered good form, when visiting friends or strangers, to send a servant ahead to announce their coming. This corresponds to our custom of sending a card or note several days in advance when we are planning to visit someone and we wish him or her to be at home.

It was not until the late 17th and early 18th centuries that the visiting card, as we know it, came into general use. Its development appears to be most marked in France, as are, indeed, most social developments. During the 18th century in France we find a whole generation of artists and designers devoting themselves entirely to the creating of visiting cards for the fashionable world.

Many of the elaborate visiting cards of this period are still in existence. We have seen one, for instance, decorated with a wreath of roses bordered with olives and bearing the name "Marquis de Llano." The decorations were made by the artist Raphael Mengs.

Another card bears the picture of a spaniel holding a miniature card in his mouth on which appears the name "Adam Bartsch" (celebrated author of the "Peintre Graveur," a work published at Venice in twenty-one volumes). Another one of his cards reveals a savage dog tearing a roll of paper which bears the date 1795. Beneath it is the legend: "Adam Bartsch has the pleasure of pre-

senting his compliments and good wishes for the New Year."

Ornamented cards such as these were used for various purposes. They were sent with gifts. They were left at homes to show that the owners had been there. Invitations were written on them.

It appears that men had their cards ornamented to harmonize with their professions. Thus the architect Blondel had his name inscribed above the cornice of a ruined monument; an artist had a palette on his card; the landscape gardener, a bit of pretty landscape.

After a period of great ostentation in cards, the pendulum seems to have swung to the other extreme. During the late 18th and 19th centuries, ordinary playing cards were used and the names were written in pen or pencil on the back. Several such cards, of about the period of 1850, were found in a house in Dean Street, Soho, under repair. One of them bears the name of Isaac Newton.

As they proved useful and convenient in the matter of visiting cards, the playing cards were next used for invitations. Invitations to dinners and parties were scribbled on their backs. But toward the close of the 19th century such social carelessness was frowned upon, and the simple pasteboard card which we know came into favour.

Our custom of using white cards bordered with black for mourning purposes possibly originated with the Chinese. They have used cards of various kinds from a very early period. And they have been among the first to use a different colour to indicate mourning. The Chinese visiting card is a strip of vermilion paper printed in black. For mourning purposes the paper is white printed in dark blue.

The formula on the Chinese visiting card is as ornate as its appearance. The card bears not only the name of the visitor, but an address of respect to the host. One card, to give an example, bears this inscription:

The tender and sincere friend of your Lordship, and the perpetual

disciple of your doctrine, presents himself in this quality to pay his duty and make his reverence even to the earth.

The correct card of to-day is engraved with the name only, or with the name and address. To be absolutely correct it is pure white engraved in black. Cards for mourning are white edged with a narrow border of black. (See pp. 588-589 for the origin of black as the color of mourning.)

Before leaving on a long trip to some distant place, it is customary to call upon one's friends, not for the purpose of making a visit, but merely to leave one's visiting card on which one has written in one corner the letters P. P. C. The cards may be mailed if preferred.

This is a rather old French custom. The letters P. P. C. mean *Pour prendre congé* (To take leave). The card is purely a courtesy card, to inform one's friends of one's departure, and no acknowledgment is necessary.

CHAPTER XII

HOSPITALITY AND ENTERTAINMENT

And when ye reap the harvest of your land, thou shalt not wholly reap the corners of thy field, neither shalt thou gather up the gleanings of thy harvest. And thou shalt not glean thy vineyard, and the single grapes that drop in thy vineyard shalt thou not gather up. For the poor and the stranger shalt thou leave them. I am the Lord thy God.
—LEVITICUS XVIII, 9.

THE CORNERSTONE OF CIVILIZATION

“**T**HE hospitable reception of guests procures wealth, fame, long life and heavenly bliss,” says Manu, the maxim-maker.

As we ride back across the ages, peering here into a palace, there into a hovel, sometimes into a cave on the hillside, sometimes into a tent on the edge of a desert, we are inclined to shout, “You are right, old Manu!” Wherever history traces the tale of hospitality, there too it traces the tale of man’s greatest development. Hospitality appears to be one of the cornerstones upon which the city of civilization has been built.

Of course, there was no hospitality when mankind was young, when life was lived from day to day with no thought of a past or a future. All that mattered was to-day—food and shelter and comfort for the one little life from dawn to dark.

But hospitality came early into the life of man. When food was scarce, man ate furtively and alone in some corner; but when it was plentiful, he shared.

This sharing of food grew, undoubtedly, more out of a sense of vanity than from any feeling of generosity. The man who killed the ox or the bear was proud of his achievement. Here was food, good food. Come and taste of it.

He had killed it. *He* had made this food possible. And he felt, as he strode around the spot watching the others timidly tear bits of the beast away, that he was superior to them, that they were obligated to him.

We trace the same sort of personal vanity and pride in the great feasts given by tribal chiefs and kings. It gave them a sense of power and importance to gather people around them and give them food. The chief who could feast fifty tribesmen felt mighty. No one else could feed fifty men. No one else had so much food, so many good things. And hence, no one else was so powerful, so important.

It is not difficult to parallel this in modern life. The fashionable hostess strives to give the most brilliant function of the social season. Magnificent dinners are given, frequently, not out of any mistaken sense of generosity but because the host and hostess like to feel that they *can* give magnificent dinners.

Yet in early life it was just this sort of selfish vanity that aroused in man the first slight inclination toward hospitality. He found a peculiar new kind of pleasure in sharing, in being generous. It was probably different from any instinct he had ever sensed before. He felt warm and comfortable as his friends came from all around to share in his kill. Good people. They honoured him. They respected him. And there was plenty of meat for all!

So he played generous host, and the part pleased him. It has pleased king and vassal, lord and peasant, duke and commoner in all the ages between. There is no satisfaction that can be likened to the satisfaction of giving.

And so hospitality came into the darkness of early times and helped to broaden the shaft of light that already indicated the path of human progress and development. It became a step upon which mankind climbed to reach a higher and better place for itself. It became a cornerstone which mankind used in building the foundation for civilization.

Relationship of Food to Hospitality.—Like a deep-sea pearl, hospitality has taken on many rich and beautiful hues. But in early life hospitality meant just one thing—sharing your food with your neighbour or with a stranger. Later it meant sharing your sleeping place with him, giving him shelter and protection for the night. But the hospitality that threw open the hut or the tent to the stranger was delayed until mankind could be sure that not every stranger who approached was an enemy, that not every wanderer was an evil spirit.

Among almost all savage tribes, once you have broken bread with a man or taken a drink with him you are considered on peaceful terms with him. You are under obligations to protect him if he is in danger; he will protect you if you are in danger. This act of hospitality, of eating together, is a tie that binds in close relationship.

Thus, in the villages of Leti, Moa, and Lakor friendship is expressed by eating together. In Sumatra the guest is presented with betel (a nut which when chewed makes the teeth black) in token of friendliness. In Java a superior pays the inferior a high compliment if he offers his half-chewed betel.

From the earliest times, eating and drinking together has been a tie of relationship. Writers like to call it food kinship. It was widely prevalent and was usually of a ceremonious nature. This food kinship was an elementary form of hospitality; it exists to-day in various modified forms. Its influence can be traced even in modern hospitality.

The traveller among savage peoples finds that many of them have actual formulæ for hospitality based upon the old principles of food kinship. The Tahitian formula for hospitality is "*Haëre māi ta maha*" (Come and eat with us). Among the Koniagas visitors are presented with a cup of water as a ceremonial mark of friendship and the customary phrase is, "Let us be friends." Among us it is

the custom to serve tea or refreshments of some sort to the visitor.

We know that in modern life the refusal of food or drink is not always taken in good grace. It is considered an act of common politeness to accept it, whether one wants it or not. This, too, appears to be a survival. Among the Bedouin Arabs it has, from the very earliest times, been considered a serious breach of etiquette to ride up to the front of a man's tent without stopping and eating his bread. According to the code of manners prevalent among the Arabs, the man in the tent has reason to consider himself insulted, and hence an enemy of the other.

Among the Iroquois the regular act of courtesy and friendliness toward a visitor was to present him with a dish of hominy. To refuse it would be a great breach of courtesy and would cause instant enmity. In Sumatra a similar custom prevails. The guest is offered betel and he must accept it whether he likes or not. To refuse would be an inexcusable insult to the host.

"To the primitive mind, eating together produced identity of substance, of flesh. Therefore those who ate together were kin. (See p. 250). And therefore those who ate together were friendly toward each other, on peaceful terms. Through association of ideas, eating together became inseparably linked with hospitality.

Among the North American Indians, tobacco-smoking took over all the ideas attached to food in primitive life. Just as eating and drinking together was one of the earliest ties of relationship among the peoples of early times, passing around the calumet became the regular custom of making peace and alliances, of indicating friendliness and hospitality, among the Indians. You know how, in modern life, a man does not light his cigar or cigarette until he has first asked his companions to join him.

So through the ages hospitality has always associated itself with the act of eating and drinking together, or, as in the case of the Indians, smoking together. We, too,

show our hospitality by inviting our friends to teas, to luncheons, to dinners.

Early Hospitality.—It seems that hospitality, in early life, found expression in great feasting. Tribal chiefs gave great feasts in honour of some important event or to do homage to a visiting chief. The Greeks and Romans gave great banquets to which they invited everyone of importance. The Israelites had a simpler hospitality, but they too gave great feasts. And we know that the Egyptians always feasted in great halls, offering food to their gods before they themselves touched a morsel.

There is no doubt whatever that the Israelites were a hospitable people, and that others emulated their customs of hospitality.

And if a stranger sojourn with thee in your land, ye shall not vex him. As one born in the land among you, shall be unto you the stranger that sojourneth with you, and thou shalt love him as thyself; for ye were strangers in the land of Egypt. (Leviticus XIX, 33, 34.)

We know from Homer's *Iliad* that the Greeks were great entertainers. There are descriptions of magnificent banquets and extravagant feasts. It appears that the Greeks gave feasts to celebrate all important events in their lives—births, marriages, holidays, victories in warfare; and practically everyone was invited.

The Roman feasts were greater than any, because they had the food products which enabled them to give great feasts. What they lacked they usually sent for, and their messengers went far and wide to obtain choice fruits and viands. The Romans were noted for their hospitality. Nothing was too rich or too costly for the entertainment of their guests. They had elaborate tables, beautiful ewers and drinking vessels. They appear to have been highly advanced in the art of entertaining.

The Egyptians of 4000 years ago were fond of dinner-giving as a form of entertainment. We are told that their dinners lasted several hours, and that both men and women

were invited, which was an unusual thing. In early life women did not usually attend feasts or dinners with the men. Dining couches and small tables were provided, and the guests regaled themselves with geese, game, fish, bread, and wine. During the progress of the meal household slaves stood behind the guests waving ostrich plumes.

This luxurious type of hospitality and entertainment lasted for many generations among those people who could afford it. The lower classes knew no hospitality in the sense of feasting. They shared their bread when they had bread. They celebrated their marriages and births

GUESTS SEATED IN CHAIRS ARE BEING SERVED WITH FOOD AND DRINK AND ACCOMPANIED WITH ORNATEMENTS. BOTH MEN AND WOMEN WEAR EARRINGS AND BRACELETS AND HAVE CONES OF PLUMAGE ON THEIR HEADS. THE WOMEN ALSO WEAR EAR-RINGS AND PLUMES WITH LOTUS FLOWERS DECORING OVER THE FOREHEAD.

GUESTS AT FEASTS WITH ATTENDANTS

as best they could. But they were too vitally concerned with the business of living to develop among themselves the art of hospitality. It would appear that for a long time there were only two great classes—the wealthy and the powerful who entertained lavishly; and the toiling classes who knew only the simple kind of hospitality that comes from the heart.

With the coming of Christianity there was a great impetus toward simple, unostentatious hospitality. Christ preached against luxury and display. He taught simple kindness and generosity. Feasting and lavish entertaining continued unabated among those who were accustomed to it, but something seemed to have happened in the lives of the people. A new, wholesome kind of hospitality permeated their social fabric and made its influence very definitely felt.

It became the custom to "share one's bread with the stranger at the gate." Hospitality was extended for the sole purpose of being hospitable, and not because of vanity or the desire to impress.

Among the early European peoples simple hospitality took a firm hold. The Anglo-Saxons "invited all the countryside" to the wedding feast, to the celebration. The French shared wine and bread at the tavern, and helped one another make merry. In Spain, in Italy, in Germany, in Russia, wherever we wander, we find traces of the new kind of hospitality that had marched, like some pioneer, at the head of Christianity.

Hospitality is such a vast subject, it has so many beautiful threads that reach out across the tapestry of life, that we cannot do justice to it in a book of this nature. Perhaps some day someone will write of hospitality alone, and tell of its great and far-reaching influences upon civilization. But we who discuss it here must be satisfied with the briefest kind of outline. We let our eyes rest but for a moment upon the beautiful design it traces on the tapestry, and then—on again to mankind, its habits, its customs, its instincts, its manners!

A Curious Custom of Hospitality.—A widespread custom of hospitality in early savage life, and a custom still prevalent in various spots throughout the uncivilized world, is that of "lending" the wife to the visitor (see p. 264). The Eskimo, the Australian aborigines, and almost all South Sea Islanders still practise this age-old custom, regarding it as one of the most essential duties of the hospitable host. This sexual hospitality has its parallels in modern life, in highly modified form, of course.

The books on etiquette tell us, for instance, that "the hospitable host mingles with his wife's guests and tries to make them feel 'at home.'" When going in to dinner "the host does not offer his arm to his wife but to the most important woman guest. The hostess enters on the arm of the most important man guest." On the golf links or

tennis courts the hostess who plays well should not join her husband but "play with the man she feels will be most pleased to have her."

Modern life abounds with just such laws of hospitality

The names and symbols of important guests at the Pharaoh's palace were engraved upon the "guest wall." This was accounted a high honour, as it is accounted an honour to-day to sign one's name in the guest book of a famous hostess.

as these. We do not realize, as we observe them, that their origins lie buried in the dim past of yesterday.

Possible Origin of the Guest Book.—Browsing for a while in old Egypt, we stumble across an old custom which is startlingly like a custom observed to-day.

It seems that it was customary for all important guests at the Pharaoh's palace to have their names and symbols engraved on the "guest wall." This was accounted a high honour. Modern guests inscribe their names in the guest book. The more fashionable and important the hostess, the more honourable the guest accounts it to inscribe his name in the book. One cannot fail to see the strange similarity between these two customs, separated by so many ages of civilization.

The Favoured Guest.—It has always been the custom to show deference to the favoured—that is, the most important—guest. In savage feasts the most important guest sits at the right of the chief. When Europe was young, the favoured guest always sat at the right of the host, at feasts, and was helped to the choicest joints, the rarest fruits, the costliest wines.

It seems that there have always been methods of showing deference to the favoured guests, even in the earliest times. Among the Romans there was one place at the head of the table reserved for the host, the hostess, and one guest of honour. Among the Egyptians the highest in rank sat with the host at the head of the table. Among the Greeks the highest in rank had their hands washed first, the lowest in rank last.

With us, "The host leads [into the dining-room] with the lady who is to sit at his right. If the dinner is in honour of a married couple, the host goes in to dinner with the wife of the honoured guest; the hostess goes in with that lady's husband." We see here the same inclination to show deference to the guest of honour by extending to him, or her, the place of importance at the table.

The Arabs welcomed their guests by pouring melted butter on their heads, to refresh them. The Greeks instantly showed their guests to the public baths. The Egyptians anointed their guests with oil upon their arrival. With us, as soon as the house-party guest arrives, "he is

shown to his room and not disturbed until he has rested and refreshed himself."

Among the Ainu the guest is always given the most honourable and comfortable seat—the east or sacred end of the hearth. In Persia the guest is given the favourite *sadr* or floor space opposite the door end of the room. It is customary, among modern civilized peoples, to offer the most comfortable spot and the most comfortable chair to the guest. We often see a host insisting that his guest take his own favourite seat, because it is more comfortable than any other.

"It is the height of rudeness for any one to go to an entertainment given in honour of someone and fail to meet him." We quote from a recent book on etiquette. This custom of "meeting" the guest of honour is not very different, fundamentally, from the custom that existed in ancient times. Each guest at the chief's feast, or the king's magnificent banquet, was obliged to kneel down before him and pay him homage.

The "Bread-and-Butter" Letter.

When a traveller arrives at a village in Arabia, the sheik or chief sends him perhaps a present of milk and bread and fruits, begging him to accept it as a mark of his hospitality. The stranger receives it, but before he leaves the place he is sure to be visited by the chief in person, and then the traveller is expected to make him some present in return for what he has received. Not a word is said about pay for his entertainment, for that would be a breach of the laws of hospitality; but the traveller, if he has been long in the country, knows quite well the object of the visit, and if he is wise, will make the sheik such a present as will satisfy him. If he does not, he may find after he has left the place that something has been stolen from him; or he may, perhaps, be waylaid and robbed by some persons employed by the very man who has entertained him. (From "Customs of the Bedouin Arabs," pg. 83)

A brief survey of the customs of hospitality of various peoples indicates the prevalence of just such customs as these. All peoples appear to have some mode of showing gratitude for hospitality received. The Awemba send a gift to the person who has entertained them. The prince

of Congo dedicates one of his wives to the tutelary god of his host. The Andaman Islander, to indicate his gratitude, asks to be given one of the children of the family to bring up as his own. Among us the "bread-and-butter" letter is sent to the hostess.

This is simply a grateful expression of appreciation for the hospitality enjoyed during one's stay at the home of the hostess. It derives its name from the idea of eating "the bread and butter" of the hostess' home, and has become acceptable through constant usage.

The "bread and butter" letter is written only when one has been a guest at a house party. One is expected to write it within ten days after departure. We are cautioned to write the letter promptly, for "it would be gross neglect to fail in so obvious a duty." A typical "bread-and-butter" letter is reproduced herewith:

TERRACE REVAIN,
June 23, 19—.

DEAR MRS. BEVANS:

This is to tell you again how very much I enjoyed the week-end at Pine Rock. We got into the city at five and Morgan brought me out home in a taxi. Mother is giving a small bridge this afternoon and so I found everyone busy, for while there is not a great deal to do it is impossible to get any one to help do it.

Tell Mr. Bevans that I am arranging for three or four tennis games next week, so that when I come again, if I don't win, I shall at least not be beaten quite so shamefully.

Let me know when you come to town on your next shopping trip. Perhaps we can arrange for lunch together somewhere.

Very sincerely yours,
HELEN R. JANIS.

This is simply the polished, 20th-century way of saying that one is grateful for hospitality received, and that one hopes at some future day to repay it.

Concerning Precedence.—Matters of precedence have always been of great importance. We have seen how simple matters of precedence have occasioned diplomatic battles (see p. 109), and if we could glimpse behind the

pages of history, we would see that such matters have actually precipitated wars.

With us a guest is expected to go through a doorway first. The host holds back saying, "After you" or merely indicating by nod and gesture that he wishes the guest to enter before him. But among the Chinese, the guest is supposed to refuse firmly to enter before the host and then enter with him. This is a custom of politeness very sacred to the Chinese. The host who invites his guest to enter first would consider it an insult if the guest actually did so. Thus they go through the little ceremony of refusal and of entering together.

In Arabia the host remains outside while the guest enters. He acts as a sort of "lookout" for enemies. When all seems safe and sound, he too enters the tent.

The Comanche host is offended if the guest does not enter first and take the place pointed out to him. This custom appears to exist among many peoples. Perhaps it originated in the fear of the guest to enter first—fear that the host was not friendly and might do him harm when his back was turned. If this is true, entering first would be a form of politeness on the part of the guest. It would indicate his absolute trust of the host.

Announcing One's Arrival.—The Blackfellow, about to visit a neighbouring horde, pauses while he is yet some distance off and builds a fire. This fire is supposed to warn the people of his coming. After a few moments he rises, approaches the horde, and when he is outside of the camp and within sight of everyone, he sits down. He does not enter or mingle with the people until he has been invited in by the chief or someone of importance.

Throughout the Orient it is considered a form of simple politeness to send a servant ahead to announce one's coming.

A quarter of a mile or so distance from an encampment which he is planning to visit, a Veddah stops and shouts.

He continues shouting and does not proceed until an answering shout is heard.

Many similar customs exist all over the world. It has always been regarded as polite to warn of one's arrival. Even savage peoples consider it a great discourtesy to break in upon the privacy of others.

To-day we knock on the door, ring a bell, or send in our card, as the case may be.

The Ceremonious Leave-Taking.

"The Book of Etiquette" says:

The guest must seek out the host and hostess and thank them cordially for their hospitality. It is customary to shake hands upon taking leave.

The custom of taking ceremonious leave of one's host is an old one. In the Andaman Islands it has been for generations the custom to blow into the host's hand when leaving. One writer gives the following dialogue between a host and guest among these half-savage people:

GUEST: Indeed I go.

HOST: Very well, go; when will you come again?

GUEST: I will bring away something for you one of these days.

HOST: May no snake bite you!

GUEST: I will be watchful.

Then they blow into each other's hands and part, shouting promises, cautions, and invitations until beyond earshot. Some partings are no less brief to-day!

The Blackfells and other peoples had the custom of hand-blowing and used it as frequently as we use our custom of hand-shaking. The Blackfellow to-day always blows upon his host's hands when he wishes to make known his intention of leaving. If the host is satisfied to let his guest depart, he blows upon the guest's hand in return. If not, he merely shakes his head and draws back his hand, and the guest extends his visit.

But to-day, "It is not civil or courteous to attempt to prolong the presence of any guest after he has made known

his desire to leave." And instead of being ceremonious, lengthy, and stilted, the leave-taking is brief, cordial.

THE INDIAN—PIONEER OF AMERICAN HOSPITALITY

Curiously enough, the North American Indians have always been highly advanced in the art of hospitality. While they were yet in a state of savagery they had customs of hospitality which were an inspiration to the white people who first came among them.

We must recognize the North American Indians as a race highly in advance of other savage races. We know that for ages the Indians were forced to remain savages because lack of metals made it difficult for them to battle with the forest. How could they clear the land for agriculture with only a stone ax for tool? As Widney says:

Any one who has helped, even with the steel implements of an advanced civilization, to hew out a home amid the beech woods of Ohio will realize the almost hopeless struggle which would lie before a savage race making its first start with stone ax and sharpened stick towards subduing a densely wooded land.

So the Indians slipped behind in the march of progress and civilization, as we regard progress in the sense of material things; but in many of their manners and customs they were amazingly advanced.

A study of the American Indians cannot fail to impress you with the hospitality which characterized their daily life. Few people were as open-hearted and generous as they. Their unaffected kindness and their willingness to share a last morsel astonished the early white settlers who came into contact with them. Some of the tales of English and Indian intercourse, as recorded by these early white people, are touching.

In the summer of 1584 an expedition under the auspices of Sir Walter Raleigh landed on the island of Wocoken, off Albemarle Sound. They invaded the land of the Algonquin tribes and made themselves comfortable.

Yet "there came down from all parts great stores of people" bringing ducks, hares, fish, fruits, nuts, and many good things for the newcomers. The wife of the chief, Granganimeo, came personally and invited the two leaders of the expedition (Philip Amidas and Arthur Barlow) into the house. She washed them, gave them every comfort, "and served roasted fish and venison on a board that stood along the side of the house."

In 1525 Cortes, the Spanish explorer, visited an island in Lake Peten where he was lavishly entertained by the chief of the tribe, Canec. Cortes reports that they "sat down to a dinner in stately manner and Canec ordered fowls, fish, cakes, honey and fruit."

Captain Clark, of the famous Lewis and Clark expedition, wrote with enthusiasm of the hospitality which he encountered. He told how the Indians of the Columbia Valley boiled salmon and served it on a platter of rushes, neatly made. "It is the custom of all the nations on the Missouri to offer every white man food and refreshments when he first enters their tents."

And this despite the fact that the white man was stealing their land, cheating them of their possessions, ousting them from their homes! This kind of generosity, this whole-souled and simple hospitality, cannot be found among any other people, savage or civilized.

We have borrowed many things from our Indian brothers, but nothing more valuable than their custom of generous hospitality. They paved the way for the hospitality which has become so peculiarly associated with this country. We owe them, as we owe all peoples of the world from whose manners and customs we have borrowed, a debt of gratitude.

William Thomas dwells at some length upon the hospitality of the Iroquois. We have borrowed so many little customs from these people that we feel it is worth while to quote this passage which sums up, not only the hospitality of the Iroquois, but of all North American Indians:

Among the Iroquois, hospitality was an established usage. If a man entered an Indian house in any of their villages, whether a villager, a tribesman or a stranger, it was the duty of the women therein to set food before him. An omission to do this would have been a discourtesy amounting to an affront. If hungry, he ate. If not hungry, courtesy demanded that he should taste the food and thank the giver. This was repeated at every house he entered, and at whatever hour of the day. As a custom it was upheld by the rigorous public sentiment.

The same hospitality was extended to strangers from their own and from other tribes. Upon the advent of the European race among them, it was also extended to them. This characteristic of barbarous society wherein food was the principal concern of life is a remarkable fact.

The law of hospitality, as administered by the American aborigines, tended to the final equalization of subsistence. Hunger and destitution could not exist at one end of an Indian village, or in one section of an encampment, while plenty prevailed elsewhere in the same village or encampment.

MODERN HOSPITALITY

With a background such as Thomas describes above, it is not strange that the early colonists should have acquired the habits of simple hospitality. They patterned themselves somewhat after the people on the other side of the ocean from whom they had escaped; somewhat after the red people into whose midst they had come and who set them the eloquent example of simple and kindly hospitality.

The early pages in the history of our country, darkened by the pathetic struggles of the colonists to master the conditions in which they found themselves, are brightened here and there by tales of jolly entertainments and generous hospitality. We read with quickening heart-beat of a pathetic little wedding feast in Plymouth. We read with a sudden warmth of tenderness of a Thanksgiving dinner in the wilderness. We follow a train of covered wagons westward and rejoice with the pioneers when they reach at last their destination and every man, woman, and child gladly helps in clearing the grounds for the great celebration.

Torn from their native homes, banished from their places of birth, alone in a strange new world, these pioneers were yet held together by the bond of hospitality. They were kind to one another, generous, hospitable. They shared alike the hardships and the pleasures of their experiences. *And they built strong because they built together.*

In the centuries between, many conflicting influences have moulded themselves upon the American consciousness. Many customs and fashions have crossed the ocean and patterned themselves upon our lives. But we have never wholly lost that heritage bequeathed us by the early colonists—a love of simple kindness and hospitality, a love of sharing with our neighbours and having them share with us.

Home Entertainments.—In modern life, hospitable entertainment divides itself into two kinds. There are the formal entertainments on occasions of moment; and the jolly informal entertainments that go the round of the social clock.

Formal entertainments include the large dinner, the ceremonious luncheon in honour of a visiting guest, the débutante tea, the elaborate garden party, the musicale, the début dance, the costume ball.

At one time the word "reception" included everything intended to be formal and ceremonious in the nature of entertainment. Whether a dance, a tea, a dinner or a garden party, it was known as a "reception." But the "reception" went out during the reign of Queen Victoria, and now the word is used merely to indicate a public affair presided over by a committee.

Informal entertainments include the simple dinner, the simple luncheon and afternoon tea, the card party (unless it is very large and ceremonious), the simple dance, the supper, the Christmas, New Year, or birthday party. The bachelor dinner and the shower tea are invariably informal in nature. Wedding anniversaries are usually celebrated

in an informal manner, but the dinner which celebrates the golden wedding anniversary is always formal.

Dinners Large and Small.—Dinner-giving as a form of entertainment is as old as—well, as Methuselah, at least! And we can imagine its going back very much farther, when some cave fellow, out of the goodness of his heart, invited one or two of his neighbours to join him in his feast. Since eating and drinking together appears to have been one of the earliest forms of hospitality (see p. 324) dinner-giving must be included among the earliest forms of entertaining.

Generations of culture separate the dinner-giving of early times from the dinner-giving of to-day. Let us glance for a moment at the early dinners and see what they were like.

Early savages, we have seen, simply gathered about a huge fire and tore choice morsels of food from the roasted bear or ox. The honoured guest sat to the right of the host, or the chief, and was given the very choicest bits. They ate until they could eat no more, and then slept side by side in stuffed exhaustion.

Among the American aborigines, the floor was the table and the guests ate from a common dish. Unlike the savage races of Australia and Africa, the red Indians did not stuff or gorge themselves, but ate only to satisfy their hunger. They feasted on occasions of importance, but even then with moderation. After the dinner, or the feasting, they entertained with dancing and pantomime, with feats of skill and strength.

The Greeks and Romans were fond of dinner-giving. They were both surprisingly advanced, and they had elaborate table appointments. Guests were entertained with wrestling, races, feats of strength and daring. The Roman guests came with their servants and remained for several hours. They ate reclining on couches, gorging themselves with game and fruits and “washing down the food with huge draughts of wine.”

The Egyptians, we know, were fond of dinner-giving as a form of entertainment (see p. 325). Their dinners, like those of the Romans, lasted several hours, and the guests ate during most of that time. The Egyptians had some rich table appointments, but not nearly so rich and elaborate as those of the Romans; and unlike most peoples of early times, the Egyptians invited both women and men to their entertainments.

In the East guests not only were feasted but they were expected to carry away with them the food they were unable to consume. Among some Eastern peoples, if the guests did not carry away food with them it was regarded as a reflection upon the host's generosity. Among us the hostess sometimes insists upon the favoured guest carrying away a piece of the birthday cake; the country hostess frequently prevails upon her city guest to take away a jar of home-made preserves, some maple syrup, or some other city rarity.

Women were usually barred from feasts and dinners in the East, but this was not true of the Japanese women. From the earliest times, their position was unlike that of any other women of the East. Their minds were cultivated as the men's were. They were not secluded. And the result is that they are, as they always have been, excellent hostesses.

Formal dinner-giving is one of the most difficult of all modern social entertainments in the home. It is not enough to set a well-appointed table, to serve a correct and delectable dinner. As Emily Post says:

If the great world of society were a university which issued degrees to those whom it trains in its usages, the *magna cum laude* honours would be awarded without question, not to the hostess who may have given the most marvellous ball of the decade, but to her who knows best every component detail of preparation and service, no less than every inexorable rule of etiquette, in formal dinner-giving.

The "groaning board" is a thing of the past. Hospitality is no longer judged in terms of over-stuffed larders,

No matter how formal a dinner may be, it should under no circumstances consist of more than a *hors d'œuvre*, soup, fish, entrée, roast, salad, dessert, and coffee. The dishes should be selected with a regard for balance; there should be as many simple foods as there are rich ones.

A well-balanced guest list is as important as a well-balanced menu. And after the right guests have been assembled, one must place them properly at the table. To quote from a recent book on etiquette:

It is usually a mistake to invite great talkers together. Brilliant men and women who love to talk want hearers, not rivals. Very silent people should be sandwiched between good talkers, or at least voluble talkers. Silly people should never be put anywhere near learned ones, nor the dull near the clever, unless the dull one is a young and pretty woman with a talent for listening, and the clever, a man with an admiration for beauty and a love for talking. . . . The endeavour of a hostess, when seating her table, is to put those together who are likely to be interested in each other.

Entertainment or amusement of some sort appears to have followed eating even in the earliest times. Greeks, Romans, Egyptians, all had dancing, games, or entertainments after dining. As we thumb the pages of life it is curious to note how modes of entertainment have changed, even as the mode of living has changed.

The whim of the moment is to gather about the bridge tables as soon as dinner is concluded. Hostesses deliberately invite guests upon their qualifications as bridge players. Sometimes dancing follows the formal dinner; sometimes a musicale. Frequently the guests gather in the drawing room for conversation. At large formal dinners, professionals are sometimes brought in to entertain with dancing or singing.

The little dinner, or the simple, informal dinner, is quite a delightful social function. It has less of the dignity and elaborateness of the formal dinner, but more of a jolly, informal joyousness. It follows in the wake of Christmas and Thanksgiving. It conjures in one's mind pictures of turkey and stuffed potatoes and all good things to eat. And

somehow, such impressive appointments as silver candlesticks and finger bowls fade into nothingness!

The success of the small dinner depends very largely upon the hostess. She must not become "flustered" over trifles; she must not be ill at ease if she does not want her guests to be ill at ease. If she is jolly, calm, poised, happy; if she is satisfied with things as they are and not disturbed because her home and her appointments are not elaborate; if the food is well cooked and well served, the guests will vote the dinner a success.

Origin and Evolution of the Afternoon Tea.—George Eliot earnestly inquires, "Reader, have you ever drunk a cup of tea?"

There seems to be something peculiarly heart-warming in a fat, friendly teapot. And gossip over the steaming teacups can be most enjoyable, you know! Perhaps that is why the afternoon tea has become so popular a form of feminine entertaining.

We associate the afternoon tea with merry England. Pepys, in his much-quoted diary, records that he sent for a cup of tea—"a China drink of which he had never drunk before"—on the 25th of September, 1660. Another writer tells us that tea was not introduced into England until 1661 and that the East India Company thought so much of it that they presented a few pounds to the King, regarding it as a gift worthy of his royal acceptance. Dr. Johnson declares that Earls Arlington and Ossory were the first to import tea into England in 1660.

Perplexed by these conflicting facts, we search the sources and find that it was a forgotten gentleman of Holland who introduced tea to the English. History never recorded his name. No one seems to know precisely who he was. But they know that he was a dreamy-eyed fellow who had lived long in the Orient, and who came to England at a very early date bringing with him a peculiar little leaf.

To this curious leaf the dreamy-eyed Dutchman added hot water and sugar. And he drank. But England refused

to drink with him. They would have none of him and his funny hot drink, until one or two of the curious tasted it. Instantly those who tasted the tea were converted, and begged the stranger for one of the little packages of green tea leaves he had with him.

As is the way with imagination, the story spread that the drink from China contained drugs. And as is the way with human nature, everybody began tasting it!

It was good, this tea from China. England took notice. Great quantities of the leaves were imported. Nobility adopted the tea fad. At once, everyone followed suit. To drink tea was to be fashionable. So England drank.

We do not know what clever English hostess first conceived the idea of the ceremonious afternoon tea. We presume that it followed closely upon the introduction of tea as a beverage. It would appear that fashionable hostesses took to serving tea to their guests in the afternoon; and thus evolved the custom of the afternoon tea as we know it. To-day practically the whole world sits down to its cup of tea, and in the United States, as in England, clever hostesses entertain at the tea table.

How to Entertain with Tea.—The afternoon tea, in the sense of a cup of tea and a muffin at five o'clock, is unquestionably an English institution. But the tea interpreted in the sense of social entertainment is largely of our own development.

The ceremonious tea is given for a débutante daughter, for a son returning from college, for a visiting guest, for a noted celebrity. Refreshments are served in the dining room, instead of in the drawing room or on the lawn as at simpler teas. Trays of thinly sliced bread are on the table, and dainty sandwiches in large variety. Sometimes fruit salads are served; sometimes cakes and bonbons. But the refreshments are never so substantial that they interfere with dinner.

The fashionable tea for the débutante usually includes dancing. This same type of tea is given by a hostess to

introduce a new daughter-in-law to her circle of friends. The formal garden party is simply a ceremonious tea out-of-doors.

Simple teas are delightful. With her hissing tea urn and jolly conversation, the hostess makes each guest feel happy and at ease. The occasion carries no hint of formality, of restraint. The purpose of the simple tea is to see one's friends and be seen by them, to enjoy a chat, and, if the truth be known, to show one's new tea gown!

Somehow, drinking tea together seems to strengthen the bonds of friendship. Strangers who meet for the first time at the home of a mutual friend and sit down with her for the inevitable cup of tea feel themselves friends of long standing. It brings to mind the Ardras who, from earliest times, had the custom of drinking together as a sign of peace and friendship; the Seminoles and their famous drink which establishes the tie of friendship; the many other savage peoples of early times who drank together as a symbol of their friendliness.

The trousseau tea is a modern adaptation of the tea party. The young woman who is about to be married invites her friends to an informal tea at which she displays her trousseau and gifts (see p. 279). Tea, cinnamon toast, muffins, and fruit are usually served.

The Japanese tea party is becoming a popular form of informal entertainment. The home is decorated with Japanese lanterns, rugs, incense burners, etc., and the guests are required to wear Japanese kimonos. Real Japanese tea and rice cakes are served, with almonds and cookies in tiny lanterns to delight the guests. The latter, by the way, do not sit on chairs, but cross-legged on cushions in the approved Japanese fashion. At a recent Japanese tea the women guests were presented with miniature parasols as souvenirs.

The high tea is a favourite form of tea entertainment when one wishes to invite eighteen or twenty friends without undertaking the trouble or expense of a dinner. Sunday

evening seems to be the popular time for the high tea. Small tables are used, four guests being placed to a table. These little tables are covered with tea cloths and decorated with a sprig of flowers in a coloured vase. At this type of tea one serves salads, sandwiches, cold cuts, tea or coffee, and cake.

Coffee as a beverage was introduced in England as early as 1662. It made its appearance in France in the same year. But long before the French and English had learned to know and love the rich aroma and pleasing flavour of coffee, the Persians and Arabians were using the beverage. The Arabian writers of very early times mention coffee as a drink. And the Persians are said to have drunk coffee as early as A.D. 875!

The Turkish coffee party is a novel and interesting method of entertaining. The coffee is brewed at the table in a tall Turkish coffeepot and served in Turkish cups. The delectable Turkish paste candy and cookies are served with it. Among coffee lovers, the "afternoon coffee" has taken the place of the afternoon tea. In Germany "afternoon coffee" is indeed a social entertainment and is known as the *kaffee klatsch*.

In the summertime, hostesses like to serve iced drinks to their guests. An iced-tea party would be good fun. The clever hostess would send out an unusual invitation—something like the one that follows—and make the party live up to the promise.

Brrr, it's cold! The tea, of course. There's going to be plenty of it at Ridgefield Terrace on Monday afternoon. And some other cooling things to make you forget the weather. Shall I expect you at five? I have a very special little surprise for you.

The "other cooling things" can be chilled fruit, ice-cream, and peppermints. Or one might serve image ices and cookies. The "little surprise" might be a pretty fan or some similarly appropriate souvenir.

With a little originality the clever hostess can make even

the simplest entertainment charming and delightful. There is absolutely no reason why the hostess with but a small home and limited equipment should feel that she is handicapped. She may not be able to give elaborate dinners or large formal teas, but she can certainly give jolly, informal teas and parties that her guests will enjoy.

In the chapter on Holidays are various suggestions for entertaining on specific occasions. This chapter will prove helpful to the reader who is planning such entertainments. Similar suggestions will be found in the chapter on Games and the chapter on the Dance.

The reader is urged above all things to remember that true hospitality is of the heart, rather than the purse. A cordial handclasp and a cup of tea can give more comfort and happiness than a stiffly formal and extravagant dinner party.

CHAPTER XIII

THE TALE OF TABLE MANNERS

Ages before man felt the need of indigestion remedies, he ate his food solitary and furtive in some corner, hoping he would not be espied by any stronger and hungrier fellow. It was a long, long time before the habit of eating in common was acquired; and it is obvious that the practise could not have been taken up with safety until the individuals of the race knew enough about one another and about the food resources to be sure that there was food sufficient for all. When eating in common became the vogue, table manners made their appearance and they have been waging an uphill struggle ever since.

—RICHARD DUFFY.

FOOD AND CIVILIZATION

MAN was created hungry. And being hungry he ate.

To satisfy hunger needs no reason; it is as natural an instinct as sleep. But to store up food for future use, to cultivate it, to cook it and make it palatable—all this requires a degree of reasoning which came only after long ages of development. And to make of eating a ceremony, a social pleasure to be enjoyed with one's fellows, requires a degree of cultural advancement which followed but slowly in the path of reason.

Eating, then, knows no other origin than hunger and the natural instinct to satisfy that hunger. But eating habits, or manners, have been moulded by a million external influences through the ages of human existence. The development of eating habits has kept pace with man's own development.

Take any people in the world, study their eating habits from the earliest times to the present day, and you have a pretty fair picture of their social progress. The French and the English, who have reached what we consider a high degree of civilization in the social sense, have ex-

cellent table manners. The Australians and the Africans, who are still groping at the bottom rung of civilization's great ladder, eat with their hands or with crude implements.

As surely as a compass points the direction a floundering ship must take, the eating habits of a people point to the direction those people have trod in the path of civilization.

Luncheon with Primitive Man.—Early man subsisted upon berries, roots, raw fruit, insects. He had meat when he could pick up a dead animal or kill one himself.

We can see him prowling through primitive forests, this brute-man ancestor of ours, searching for something to satisfy the hunger that gnaws at his stomach like hundreds of insects trying to tear it apart. In the beginning, it did not matter so very much what he ate. And to the manner in which he ate, he gave not the slightest thought.

Perhaps he finds a berry tree or some roots that are good. Perhaps he comes, suddenly, upon the remains of an animal upon which some beasts have gorged. Or perhaps he is fortunate and is able to kill some small forest creature that crosses his path. Gazing quickly and furtively around, he sits down to his "luncheon."

We handle our food delicately. But early man's instinct was to "wolf" his food—eat it quickly and stealthily before some other hungrier fellow happened along. Therefore, if we are to be unseen guests at his luncheon, we must hide behind a primeval tree and be silent, lest we frighten him away.

He has felled a bird with a stone. See how he tears at it savagely, just as a starving cat might tear at a sparrow. He crouches low under the berry tree and crunches the slender bones between his powerful teeth. A low growl escapes him as he hears a twig crack. We shrink back into the shadows. It would never do to let him see us. To protect his bit of food he would jump at us like a tiger. And who are we, of an artificial age, to compete with the great savage man-beast of primitive times?

But we make up in reason what we lack in strength, so we wait until the fellow has gorged himself with bird and roots and berries, and we watch him while he sprawls out on the ground with a grunt of contentment and falls almost instantly into slumber. And we come a little closer to examine him.

Here he lies, stuffed to exhaustion like any animal, the man upon whose shoulders all later civilization is built. See how clean he has picked the bones of his bird. Not a speck of flesh remains. His strong, sharp teeth have done a good job. No need for forks and knives here! We take a bit of the bone for a souvenir and steal softly away, knowing the fellow will sleep until he is hungry again. And we walk on to meet the next stage of development.

Man Begins to Eat Leisurely.—We are going to dine with a group of cave people on the hill. These people live in a favourable climate, as you notice, and there is plenty of food for all. Therefore the social instinct has made itself felt; and as we climb the forbidding path to the cave home above, we see that there are half-a-dozen figures grouped about the fire. It would appear that a large beast of some kind has been killed.

Taking our place silently at the head of the group, we watch the men around us for a cue as to how we shall eat. There are no eating implements. The men squat in a semi-circle around the fire. We see them tear huge pieces of flesh from the beast, devouring immense mouthfuls. Marrow bones they crack open and suck out the juices. They glance about them furtively, now and then, as though expecting to be attacked; but they have none of the stealth and half-starved fear that we saw in the earlier man.

The meal completed, the men sit out under the stars for a while, silent, or playful like well-fed animals, according to their nature. Then they enter the cave, rolling a huge rock against its mouth to keep out the dangerous beasts. In a few moments they are sleeping soundly.

And we leave them sleeping so, knowing that they will

waken hungry again, go hunting, return with the kill, eat and sleep once more. From such rude beginning has grown our complex and highly polished routine of living.

Not all peoples were quick to welcome company while they ate. The food resources of the locality in which a people found itself had very much to do with it. Where food was plentiful, men formed early the habit of eating together. But where food was scarce, men for a long time retained the habit of eating stealthily and in solitude.

Just as the modern small boy eats his piece of cake or candy in some corner, hiding it selfishly from his playmates, primitive man ate alone because he was afraid of having someone steal his food from him. Habit, as we have seen in an earlier chapter, becomes custom. In later life we find it custom even for kings and priests to eat by themselves.

The King of Abyssinia still dines alone. In Loango any person who sees the king eat is put to death. In Tonga everyone turns his back upon the king while he eats or drinks. The king of the Congo always eats and drinks in secret. It is said that the Emperor of Germany never ate in public but sat out every banquet before an empty plate.

We venture that customs such as these, existing as they do in many places throughout the world, had their origin in man's first fear of having his food stolen. But we find, as we turn a few pages in the book of life, that another element enters into this seemingly widespread preference for eating alone.

This element, which characterized almost everything else which primitive man did, is fear. It appears to have been a common belief among savages, and still is to a great extent to-day, that evil could enter the body with food. Bad food or too much raw meat causing the tortures of indigestion would give rise to just such a belief. Unable to understand the pains and aches that followed his careless eating, primitive man would have blamed it on evil

spirits. And those evil spirits, according to his primitive reasoning, must have entered his body with the food.

Thus great caution attended the eating and drinking of these early men. They avoided their fellows. They found their own food and ate it alone. The kings and chiefs particularly took great caution in eating, fearful of the enemies who envied them their power. Many authorities believe that it was this fear which led early rulers to eat in solitude rather than the fear of having their food stolen. To us it would seem that eating alone as a habit, handed down from very primitive times, came first; and that in later primitive times the habit became custom, law, when man conceived the idea of evil entering the body with the food.

For instance, it was at one time the habit of all the natives of Loango to eat alone. This was when food was scarce and fear of having the food stolen was paramount. Later, when food became more plentiful the natives began to eat together, but it had become by that time the custom for the king to eat by himself. To-day it is a law that the king of Loango may not be seen eating or drinking under pain of death.

Man did not begin to eat leisurely and in comfort until he came to realize that there was food enough for all. This realization, of course, did not come until comparatively late, and it came only to those who actually had an abundance of foodstuffs. To them it gave freedom from the fear of starvation, and they began to think of ways to improve the taste of their food, means of eating in greater comfort.

Eating habits came into being, and they have been struggling step by step with civilization ever since.

DEVELOPMENT OF THE CULINARY ART

The first men did not cook or prepare their food, any more than an animal does to-day. They had hazelnuts

and beechnuts, wild cherries and gooseberries, crabapples, birds, eggs, snails, frogs, fish, caterpillars (still relished by the Chinese), and small animals such as the rabbit, the hare, the rat. They ate to satisfy their hunger and with no sense of delicacy. We are told that they ate even the putrid, ill-smelling flesh of dead animals, developing a taste for it which has survived to the present day. The epicure will tell you that certain kinds of game and many kinds of cheese must be semi-putrid before they taste right!

For a long time there was no change in the eating habits of man. He was hungry and he ate whatever he could procure in whatever form it was procurable. Then came fire and its tremendous influence upon the daily life of man. He was able to cook his food and store it away for periods of famine. We see him, during this next great stage, at his "squatting place" as Wells calls it, around his fire, preparing the food before devouring it. He has stone implements. He roasts the ox and the bear. He eats still in his savage, animal-like fashion but more leisurely than before; *and he has a knife made of flint* to help him crack the bones and cut apart the beast.

Mr. Wells says:

The most probable way in which fires were started was by hacking a bit of iron pyrites with a flint amidst dry dead leaves; concretions of iron pyrites and flints are found together in England where the gault and chalk approach each other.

Sir John Lubbock and Ludwig Hopf advance the same theory. We have already seen how natural phenomena, such as a conflagration caused by lightning, or spontaneous combustion caused by fermenting vegetable materials, made known to man the power of fire (see p. 14). The use of fire for cooking food, first for purposes of preservation and later to improve the taste, seems to be of great antiquity.

There are many curious traditions concerning the origin of fire. The Maoris tell this tale: The great Maui was given fire as a gift by his old blind grandmother, Mahuika, who drew it by magic from the nails of her fingers. Maui

wanted a stronger fire, so he pretended they had all gone out and prevailed upon his grandmother to draw him a new one from her great toe. It was a fierce fire she gave him, and everything melted before it. Even Maui began to burn, but a deluge was sent from heaven to save him—and the world. (A curious interpretation of the deluge myth.) But Maui managed to preserve a few sparks of the fire, before it was all extinguished, and imprison them in some trees. From these trees, so the Maoris believe to-day, men draw their supply of fire.

Finnish mythology tells us how "fire, the child of the sun, came down from heaven, where it was rocked in a tub of yellow copper, in a large pail of gold."

The legends of the North American Indians describe how the great buffalo, hurrying across the plains, made sparks fly into the night. These sparks set the prairie ablaze wherever the buffalo's hoofs hit the rocks, and the Indians were given the secret of fire. The same idea prevails in Hindu mythology.

The Dakotas claim that their ancestors obtained fire from the sparks which a friendly panther struck with its claws upon a stony hill.

Origin and Development of Bread-Making.—Strangely enough, bread, which is to-day a staple and practically universal item of diet, is one of the most ancient forms of food. The calcined remains of bread or cakes made from coarsely ground grain have been found in regions around the Swiss lake dwellings. Authorities estimate these cakes as dating back to the Stone Age.

These cakes appear to have been made of a sort of bruised grain. Round-shaped stones have been found in the lake dwellings which were doubtless used for pounding or crushing the grain into a kind of coarse flour. It was probably the custom of the lake dwellers to place the dough on a flat or convex-shaped stone which was heated, covering the cake with hot ashes so that it would bake through.

Perhaps the earliest form of bread was prepared from acorns and beechnuts pounded to a powder. There are to this day remnants of Indian tribes on the Pacific slopes who eat a sort of cake prepared from crushed acorns. Most of the Indians, however, used maize for their cakes.

The early Egyptians used a charcoal fire to cook their meats. They made bread and caraway-seed cakes. Like the Israelites they were highly advanced in the art of preparing food, and they appear to have been among the first to know of meat-curing. Four thousand years ago the Egyptian noonday meal "usually consisted of a soup made of onions, garlic, and beef, although the flesh of the ibex or gazelle were used as favourite dishes."

The Israelites made bread, we know, for Abraham said to Sarah, "Make ready quickly three measures of fine meal, knead it, and make cakes." (Genesis, XVIII, 7.)

With the cultivation of wheat, oats, and rye, and the use of yeast, bread-making became an art. The baker became a highly respected member of the community. Bread, in many varieties, of course, became the foundation food of mankind. One might say that civilization itself has been nourished and has grown big on bread. It is one of the oldest, most widely used and most nourishing foods of man.

Concerning the Stove.—The first stoves were simply hot stones. In using his flint knife, man evidently discovered that stone held heat, and soon we find him utilizing this discovery. Huge, round stones have been found which appear to have been used for purposes of cooking food. Some are flat, some concave. A large pot, of a later period, has been found containing several smooth round stones. It is believed that early man heated water by dropping hot stones into it.

In early times, the fire was built in the centre of the cave; and for a long time the cook fire occupied the centre of the home. But later the fire was moved to the side of the home, and in the 12th century chimneys to supply

draughts and to lead smoke and fumes out of the house were introduced.

Closed stoves of brick or porcelain tile have been in use in Holland, Russia, Germany, and other northern countries of Europe since the end of the Middle Ages. Prior to that period there was no way of leading the smoke out of the house, and the doors of cottages were made in two sections. The lower section was kept closed to prevent the chickens and pigs from entering; the upper section was swung open to let the smoke escape.

Cast-iron stoves were known in Alsace as early as 1490, but they did not come into general use until considerably later. For many generations the brick and tile stoves were in use.

The early colonists, we are told, did their cooking in open fireplaces. They had large swinging cranes on which to suspend their pots. For baking they used brick ovens. In 1744 Benjamin Franklin invented the portable fireplace of iron.

To-day we have gas ranges, electric toasters, grills, a wide and astonishing array of highly perfected stoves. But when the palate tires of the *camouflaged* foods of civilization, it can still taste the wholesome tang of foods cooked plainly and simply in the primitive way—over a roaring bonfire or buried in hot ashes. Campers will tell you they prefer such food to the highly seasoned and richly sauced foods of the modern table.

Cooking as an Art.—The ancients, though great eaters, had none of the subtle refinements of taste which we associate with food and with eating. They ate because they were hungry, and simple hunger does not produce the art of cookery. Food was not disguised to tempt the palate until man was sufficiently advanced to have acquired taste.

As we study the development of the culinary art throughout the centuries, we cannot fail to see how closely cookery is bound up with the physical possibilities of the various countries, and of course with its products. Where cater-

pillars were plentiful a taste was acquired for them. In China, for instance, even to-day dried caterpillars are sold at the market and they are prepared for eating in various ways. The Chinese have also a taste for eggs that have been so long buried that they are black, hard, and tasteless.

We who find it difficult to understand such grotesque tastes as the Chinese have must remember that they have been accustomed to eat such food from the very earliest times, and they would consider our taste for rich pastries and creamy sauces quite as grotesque.

In the United States, pig and chicken are eaten daily by great multitudes of people. But among the Samoans a pig or chicken is never killed unless there are important guests to be feasted. The difference is that in the United States pig and chicken are plentiful, while among the Samoans both are scarce.

With increasing culture man developed a pampered appetite. By the time of the Greek and Roman civilizations, man was eating not only to satisfy his hunger but to please his palate. We know the sumptuous character of the Greek banquets. Athenæus took pains to get whatever information he could concerning the manner in which delicacies for the table were prepared by various peoples. There appear to have been many food connoisseurs, prominent among them being Hegemon, Philogenes, Numenius, and in the third century before the Christian Era, the great Epicurus.

The Romans borrowed from the Greeks their ideas of food and food preparation. We have already seen how the Romans sent messengers far and wide to secure for their feasts choice fruits and rare viands (see p. 325). They added a note of luxury and extravagance to the table; but they did not add any notable subtleties to the art of cookery. They did, however, invent a baking pan with six spaces for baking batches of small cakes.

It is interesting to note how old cheese is. The early Greeks appear to have been familiar with cheese as a

foodstuff long before they knew how to make butter. The Romans evidently copied from the Greeks the method of cheese-making, for they too are known to have had cheese in their dietary. It was known also to the early Egyptians and is mentioned in the Bible.

The Beginning of Modern Cookery.—Cookery, as we know it to-day, cannot be said to have started before the Renaissance in Italy; and Italy was indeed its birthplace. Possibly because of the traditions surrounding Rome, possibly because of the geographical location and the natural products, possibly because of a natural skill in cookery, the Italians became highly advanced in the art. It is apparently to the Italians that the development of cooking in Europe was due.

According to Montaigne, Catherine de' Medici brought Italian cooks to Paris and introduced there a new kind of cookery. Abraham Hayward, in his "Art of Dining," tells us that the Italians were the first to introduce ices into France. As France was by this time the inspiration of social Europe it did not take long for Italian ideas to spread into foreign kitchens.

According to the records that have come down to us, the Italians not only developed the art of cookery but the art of dining. They were among the first to use forks. Coryate, writing his "Crudities" in the time of James I, says that his friends mocked him and called him "furcifer" because he used "those Italian neatnesses called forks."

One of the greatest advances in cookery took place in France during the reign of Louis XIV. Béchamel was the king's *maître d'hôtel*, and he is said to have created many new and tempting dishes. He is particularly famous for his sauce.

Madame de Sévigné relates a rather pathetic tale of Vatel, one of the most famous chefs of this period. So conscientious was he in the preparation of foods that, when a fish that he ordered for part of a dinner he was arranging failed to come in time, he committed suicide. He wel-

comed death rather than the disarrangement of his menu.

Another great advance took place under Louis XV, who was a glutton if there ever was one. He ate for the sheer pleasure of eating rather than to satisfy any hunger. His reign saw many new developments.

Mayonnaise, for instance, is credited to Richelieu. Originally it was known as *mahonnaise*. Various rich sauces of the time were named for la Pompadour. It appears to have been the custom to name new dishes for celebrities of the day, and we meet with such names as "*potage à la Condé*," "*poulets à la Villeroy*," "*chartreuses à la Mauconseil*," etc.

So did French cookery develop, until the Revolution. From the beginning of the Revolution until the early 19th century the art suffered a decadence. But it was revived about 1825 by the celebrated Carême who has been at different times chef to Tsar Alexander I, George IV, and Baron Rothschild. Carême appears to have been an artist in dinner-giving. An account of one of his dinners can be found in Lady Morgan's "France," vol II, p. 414. Carême was the author of the famous volume known as "Maitre d'hôtel français."

An important development of the Revolution was the appearance of many public restaurants in Paris. The first is said to have appeared in the rue des Poulies in 1770 under the name of "Champ d'oiseau." Twenty years later, in 1790, there were more than a hundred restaurants. In 1804, when the Revolution was over and Bonaparte sat at the head of France, there were about six hundred. By 1815 the restaurants had attracted the best culinary artists of Paris.

England appears to have had more authors of cook-books than famous chefs. "The Accomplisht Cook," by Robert May, appeared in 1665. May was the son of a cook and is said to have studied abroad under his father. In the preface of his book he criticizes the elaborate dishes

of the French which, he indicates, were created as much to amuse and astonish as to satisfy the appetite.

Dr. Pegge's "Forme of Cury" (1780) is a rare and delightful old English work. It has between its covers many interesting reflections concerning the historical background of food and eating. He says, in one instance,

We have some good families in England of the name Cook or Coke. Depend upon it, they all originally sprang from real professional cooks, and they need not be ashamed of their extraction any more than Porters, Butlers, &c.

Though the English became skilled in certain phases of cookery, they never quite equalled the French. We quote from the "Encyclopædia Britannica":

At the present time, whatever the local varieties of cooking, and the difference of national custom, French cooking is admittedly the ideal of the culinary art, directly we leave the plain roast and boiled. And the spread of cosmopolitan hotels and restaurants over England, America and the European continent, has largely accustomed the whole civilized world to the Parisian type. The improvements in the appliances and the appurtenances of the kitchen have made the whole world kin in the arts of dining, but the French chef remains the typical master of his craft.

Luncheon with primitive man—and a noonday meal at a modern restaurant. What a tremendous cultural stretch separates the two!

WHEN MAN BEGAN TO DINE

By no stretch of the imagination can we possibly call the eating of primitive man dining. True dining had its inception when man began to eat leisurely, when he began to use tables instead of the ground, when he had table implements, no matter how crude. When he thought not only of what he ate, but of how he ate it, man commenced to dine in the finer sense of the word.

Richard Duffy relates an interesting anecdote of the World War which we cannot resist quoting here. He says:

In the midst of the war, some French soldiers and some non-French of the Allied forces were receiving their rations in a village back of the lines. The non-French fighters belonged to an army that supplied rations plentifully. They grabbed their allotments and stood about while hastily eating, uninterrupted by conversation or other concern. The French soldiers took their very meagre portions of food, improvised a kind of table on the top of a flat rock, and having laid out the rations, including the small quantity of wine that formed part of the repast, sat down in comfort and began their meal amid a chatter of talk. One of the non-French soldiers, all of whom had finished their large supply of food before the French had begun eating, asked sardonically: "Why do you fellows make such a lot of fuss over the little bit of grub they give you to eat?" The Frenchman replied: "Well, we are making war for civilization, are we not? Very well, we are. Therefore, we eat in a civilized way."

The "civilized way" seems to be on tables, out of dishes, and with knives and forks instead of fingers. Let us see how these appointments were given to civilization.

Chairs and Tables.—Who knows what comfort-loving savage first sat upon one stone and used another for a "table"? The first chairs and tables will never be known. Primitive man, of course, had at first no furniture. The earth was his table, and the sky his ceiling. For eating implements he had his ten fingers and his great, strong teeth. But at about the time primitive man took to cave homes, the first crude forms of chairs and tables of which we have record made their appearance. The table was just a huge flat rock in the centre of the cave; the chairs, smaller fragments of rock (see p. 19).

Development of the chair and table, and of appointments for the table, followed very naturally in the wake of culinary development. Where food was eaten raw, in solitude, and without preparation of any sort, the fingers remained the only implements and the earth remained the table. But where cookery lent itself to subtler development, becoming an art, dining too took on all the lights and shadows of advancing taste.

For instance, in Rome, where every meal was a luxurious banquet for those who could afford it, we find rich and

beautiful tables, dining couches, and drinking vessels of magnificent artistry.

It was the ancient custom, among both the Romans and the Greeks, to recline on couches while eating. This custom undoubtedly originated with the Greeks who were wont to go first to the public baths, then to pass immediately from bath to couch. While resting on the couches they were usually served some light repast. From this, very possibly, grew the general custom of eating in careless, recumbent position, on dining couches.

The ancient tables were very beautiful, particularly those of the Romans. Most of them were square with four legs or oval with three connected legs. They resemble modern tables, except that they are lower. Necessarily so, for high tables would not have been convenient to reclining persons. It is to be noted that the ancients used tables chiefly, if not solely, for purposes of eating, and not for reading or writing. Writing tables came later, when writing itself was general.

The materials used for table-making were wood, at first—particularly maple wood—and later, bronze, precious metals, and ivory were introduced. From characteristic examples in the museums it would seem that the ancients were fond of imitating the legs of animals in making the legs of their tables. Most table legs were given claws at the end. Evidently we have not outgrown this peculiarity, for modern furniture is frequently made with clawed legs, usually around a ball.

Among the Romans there was usually a place of honour at the head of table. The highest in rank sat at the head, next in rank at the upper end, next at the lower end. Everyone washed his hands at the table before eating, and this ceremony began with the highest in rank and ended with the lowest. Foods were brought in and placed, as to-day, before the man at the head. Fruits were brought in baskets which were placed on the floor beside the table. According to records, the Romans sometimes used several

tables, one of them being the "honour table" reserved for the host, hostess, and special guests.

Ray S. Lineham, in "The Street of Human Habitation," tells us that the Egyptians, who feasted in long halls, sat on chairs and were served by the household slaves. The Egyptian host supplied one whole chair for each single guest, but married people got only one between them!

The development of the chair and the table was rapid, and by the opening of the Christian Era it was an established custom among European peoples to eat from the table. It had various forms, of course, and sometimes was simply a board running around the side of the house. The mantelpiece is said to have originated with this old dining board. Apparently the North American Indians used just such a board, for we read that the wife of the chief, Granganimeo, took the English explorers, Philip Amidas and Arthur Barlow, into the house, washed them, gave them every comfort, and served venison and roasted fish on a board that stood along the side of the house (see p. 335). But for the most part the earth served our Indian brothers as table.

Although the chair reached a high degree of development among most European peoples, becoming rich and elaborate in one generation, simple and crude in another, it failed entirely to gain a foothold among various other peoples. For instance, the Chinese and Japanese to this day have very little use for the chair. We speak now of the native Chinese or Japanese, in his original environment; not of the Americanized man who has adopted, to a great extent, the manners and customs of this country.

Tablecloths were used by the Romans during the period of the last Emperors. They were of linen, striped with purple and gold. They had napkins, too, which were used for a very different purpose than we use napkins to-day. The guest at a dinner would wrap delicacies from the table and fruit baskets in his napkin and so carry them home. It was a general custom to carry away food in this man-

ner; the guest who neglected to do so took the risk of hurting his host's feelings.

Origin of the Spoon.—The true origin of the spoon must be for ever lost in antiquity. We know, however, that it is of very remote origin, and that in its earliest forms it was crude, very much like a rough ladle.

There are in the museums spoons of wood, stone, and ivory which were found in ancient Egyptian tombs. Possibly the spoon goes back even farther; spoon-like implements belonging to the Palæolithic Age have been found. The photographs reproduced are of actual "finds" to be seen at the museums.

The Greeks and Romans used spoons of bronze and silver. Some examples are beautiful, exquisitely wrought by the hands of masters now long forgotten.

The spoons of the early Christian Era were of wood. During the Middle Ages the materials used for spoon-making were bone, wood, and tin, while the wealthy had elaborate spoons of beaten silver. The Chinese, in addition to their chopsticks, had little porcelain spoons which were usually painted.

"Chopstick" is so-called pidgin-English for the small, tapering stick used by the Chinese and Japanese in eating. The sticks are used in pairs. "Chop" is pidgin-English for "quick," the Chinese word for the sticks being *kwai-tsze* (the quick ones).

Held between the thumb and fingers of the right hand, the chopsticks are used as tongs to take up portions of food. Among the Chinese and Japanese, food is brought to table cut up into small and convenient pieces. The chopsticks are commonly made of wood, bone, or ivory.

There are complex rules of etiquette concerning the chopsticks, just as there are rules of etiquette concerning the use of the spoon or the fork. They are used also as a secret code of signalling. For instance, to place the chopsticks across the top of the bowl and leave them so is a sign that the guest wishes to leave the table. With us it

was one time the custom to indicate the same thing by turning the plate upside down.

The Chinese use chopsticks because they consider the knife and fork barbaric. "We sit at table to eat, not to cut up carcasses," they say.

The Knife and Fork.—The use of the knife and fork marks a great advance in the progress of dining. This advance, however, did not come until late; only 300 years ago knives and forks were curiosities. In England they were rare; in France everyone ate with his fingers until the 17th century. At the courts of Francis I and Henri II, and even at the magnificent court of Louis XIV, forks for eating purposes were unknown.

Nevertheless, both knives and forks have been in existence since very early times. It seems surprising that they did not come into general use until so late a time.

Most authorities are of the opinion that the primitive savage used a natural fork in the shape of a small pronged twig. Others believe that the fork originated with the arrow—that it was, at first, a sort of stick, or toothpick, which was used to remove food from between the teeth. This skewer would be easy to make by people who were already making arrows.

The first actual forks appear to have been long, two-pronged affairs which were used only in cooking and for holding the joint of meat while it was being carved. They were very much like our carving forks, but much cruder, of course. They were made of iron, bone, and hard wood.

We cannot be certain when the fork was first introduced to the table for eating purposes, but we can be reasonably sure that it was not until after the Christian Era. Leandro Alberti, in "*Urbis Venetæ Descriptio*" (Venice, 1626), mentions that the wife of the doge Domenico Silvio (sister of the Emperor Nicephorus Botaniates, 11th century) was too dainty to touch her food with her fingers. Therefore she used a small golden fork for eating. She is described as being "luxurious beyond belief"

and we are told that "instead of eating like other people, she had her food cut up into little pieces, and ate the pieces by means of a two-pronged fork."

A Milanese friar, known as Fra Bonvicino da Riva, wrote about 1290 and left us a curious, versified manual of fifty common courtesies for the table. Mention of the fork appears nowhere in the poem; but the use of a spoon as a fork is indicated: "Suck not with the mouth when thou eatest with a spoon." It appears that one spoon is given the guest at the beginning of the meal, and it must suffice throughout. It is also clearly indicated, in this rare old manual, that each guest is expected to bring his own knife.

The fork was not entirely unknown in mediæval France, but it was very rarely used at the table. It was used sometimes for serving; but it was not until the time of Henri III that the fork was used in the modern fashion. In England, however, the fork was used through the Middle Ages as an article of luxury for eating fruits and preserves.

Thomas Coryate is the first to mention forks in England (1611). He tells us that when he used a fork for eating in England he was ridiculed for his daintiness.

A 16th-century writer says:

At Venice each person is served, besides his knife and spoon, with a fork to hold the meat while he cuts it, for they deem it ill manners that one should touch it with his hand.

From the 17th century, after Coryate's fork caused so much excitement, the development of table accoutrements is rapid. We see silver forks being used in Italy. We see table appointments keeping step with the developing culinary art. And by the end of the 18th century, we find that table manners as a whole have reached a fairly high degree of cultivation.

As for the knife, we know that the original cutting implements used by the human race consisted of fragments of flint or other stone, rudely chipped to a cutting edge. There are many such cutting instruments in existence. It

Bringing in the boar's head at a Saxon feast. A dainty rarely lacking on the Saxon table of the 9th and 10th centuries.

seems that the knife, or rather the cutting tool, was one of the first implements to be devised by man.

Of course, the knife took many forms and was made of many materials during the course of its development. During the Stone Age knives were made of flint, very much similar to the arrowheads that the Indians were using when the white man "discovered" them. There were also knives of bone, and in the Bronze Age, knives of bronze.

At first the knife was made for general cutting purposes. There was no such thing as a table knife in early times. Even as late as 300 years ago the table knife was a rarity. It is quite a recent development. For a long time each person carried about with him, usually in his belt or shoe, a knife of his own for general purposes, much as modern man carries around a pocket knife. Whenever large portions of food were served him, he cut them up with his knife and returned it to his belt.

The greatest advance in the table knife took place after the 17th century. Silver knives for table use were introduced in England and became popular. Sheffield, England, became one of the greatest cutlery manufacturing centres in the world and has retained that proud title without challenge.

The Use of Dishes: Pottery.—If our earliest primitive ancestors used dishes of any kind, they were natural, not man-made. It is very likely that a broad leaf was used by the savage as we use a plate; that a gourd was used as we use a bowl; that a halved cocoanut shell was used as we use a cup. These "dishes" were created, no doubt, as needed. In tropical climates, even to-day, uncivilized people use such natural objects as the cocoanut, the gourd, and the calabash for drinking vessels.

The tribal chief probably had his drinking vessel decorated and ornamented to distinguish it from those everyone could have, from the simple cocoanut shells that his subjects were permitted to use. From this custom of

ornamenting the vessel for the chief it would seem that the idea for making separate vessels and jars evolved.

The making of pottery is one of the oldest arts of man. Even in early prehistory man knew of the uses of clay and made for himself jars, jugs, and drinking vessels.

Primitive man found clay on the surface of the ground and near the river beds. He spread it out upon a stone slab to remove the foreign substances. He beat it with stones and trod upon it with his feet to make it of a fairly uniform consistency, and then he fashioned it rudely with his hands, moulding it according to his whim. The rays of the sun made it hard.

Then came the great discovery of what fire would do. Man baked his pottery, made it hard and substantial. He began to make really beautiful jugs and vessels. A great deal of this early clay work has been preserved and gives us much of our knowledge concerning these ancient peoples.

The early Babylonians were skilled and clever in pottery-making. Clay was familiar to them, though for a long time they used it only in brick-making. When they perceived it to be suitable for other purposes, they began to mould it into lamps, pots, drinking vessels of all sizes and shapes. They used a rather coarse clay, mixing it with chopped straw to give it cohesion.

Some primitive genius invented the first crude potter's wheel, and the idea was copied by the Babylonians. They sought out and found a finer clay, and with the help of the potter's wheel they modelled vases, lamps, jugs.

Among the Greeks, Romans, Assyrians, and Egyptians, pottery developed as a fine art, and some of the examples that have come down to us are magnificent. The Grecian pottery is of surpassing beauty, and one marvels that it could have been created with such crude and simple materials as were available. The Mexicans and the Peruvians also made beautiful pottery.

Some writers accredit the Egyptians with the discovery of glass-blowing, for the Egyptians had glass drinking

vessels and vases 4000 years ago. But glass-blowing was not invented until shortly before the Christian Era, and the beautiful glass objects made by the early Egyptians and miraculously preserved were modelled by hand over a core.

With the invasion of the barbarians, the fine arts died in Rome and Greece. During the Middle Ages whatever pottery was made was crude and inartistic, except that of the Moors in Spain. Then came the great revival, led by Italy. The Italians made an exquisite decorated enamelled pottery known as majolica. A variety of this type of pottery, made in Faenze, Italy, is known as faience.

During the first half of the 9th century, the Chinese

began to make fine porcelain, for which they have since become famous. The poet Tu, living in that era, writes:

The porcelain of Ta-yi kilns is light and yet strong. It rings with a low jade note and is famed throughout the city.

Tu might have been an advertising writer had he lived in the 20th century!

Trading with China, the Dutch gained a knowledge of pottery. This they combined with the knowledge of glazing which they borrowed from Italy. Then they learned how to make a blue colour by using oxide of cobalt, and they began to manufacture a clean blue and white pottery known as Delft, from the Dutch city. This blue and white pottery they were able to produce at a much lower price than they could secure Chinese wares. Thus china-ware came to be distinguished from ordinary earthenware—a distinction it has held ever since.

Before leaving the subject of pottery we cannot refrain from mentioning the two men who have, in comparatively recent times, contributed greatly to the beauty and utility of pottery. The first of these is Bernard Palissy who lived in 16th-century France. The second is Josiah Wedgwood who lived two centuries later in England.

Palissy was a potter at Saintes, France. He devoted a lifetime to a vain attempt to create a certain kind of white enamel, but in his experiments he made other discoveries which made his name forever famous in the history of pottery. He discovered the process of making beautifully coloured enamels by colouring the glazes before putting them over the baked clay. The former process had been to use a white enamel and then paint it. He made some very remarkable vases and dishes decorated with this coloured enamel. Other minor discoveries of his contributed largely to the beauty and artistry of pottery.

Josiah Wedgwood (1730–95) was one of the greatest potters the world has ever known. Authorities believe his classic vases, ornamented by the sculptor Flaxman, to be

some of the finest specimens ever produced. Wedgwood was the originator of the famous dinnerware known as Queensware. He was the first to introduce cheap china in England, so making it possible for everyone to have clean, pretty tableware.

Although pottery was a highly developed art even in early times, and our ancestors had many pots, jugs, plates, and even cups and saucers, as modern excavations show, the use of separate dishes for each person is comparatively new. For a long time it was the general custom, among the high-bred as the low, for food to be brought in on large platters, divided by the steward, and placed on the bare table. The steward used the fork and knife to carve the meat; the diners used their fingers. Fruit and pastries were placed in baskets on the floor by the tables, and the guests helped themselves as they liked.

Concerning Table Manners.—Manners of any kind, but particularly table manners, belong to an advanced age. When food was simply food, and man ate to satisfy his hunger, there was no etiquette of the table. But when the culinary art developed and gave us jellies, custards, salads, ices, puddings, and when eating became something of a ceremony, table etiquette bowed itself into the social scheme. Foods have so disguised themselves that a recent writer on etiquette is moved to include an article headed "Attacking a Complicated Dish," in which she says:

When a dinner has been prepared by a chef who prides himself on being a decorative artist, the guest of honour and whoever else may be the first to be served have quite a problem to know which part of an intricate structure is to be eaten, and which part is scenic effect!

The main portion is generally clear enough; the uncertainty is in whether the flowers are eatable vegetables and whether the things that look like ducks are potatoes or trimming. If there are six or more, the chances are that they are edible, and that one or two of a kind are embellishments only. Rings around food are nearly always to be eaten; platforms under food seldom, if ever are. Aspics and desserts are, it may be said, occasionally Chinese puzzles, but if you do help yourself to part of the decoration, no great harm is done.

It was inevitable that, as foods changed, becoming more and more elaborate, more and more disguised, the eating manners of man should have changed also. When foods were quite plain and simple, man's eating manners were in accord. But when foods became elaborate, man's mode of eating those foods lost their simplicity and took on a wholly new social significance.

When forks and knives first made their appearance on the dinner table we can be certain that it was on the tables of the wealthy and the powerful. The humbler classes did not have knives and forks until considerably later.

We can understand how these first users of the knife and fork felt themselves quite fashionable and superior. They made of eating a certain ceremony. In their conscious importance they told one another what was correct and what was incorrect.

And later, when the use of knives and forks became general, the people patterned themselves after those who were accustomed to using the implements. They were clumsy at first. They did not know in which hand to hold the fork, in which the knife. They found it easier to eat in the primitive manner of their ancestors. Yet, as always, they wanted to be "with the crowd"—they wanted to do what everyone else, and particularly what the wealthy classes, were doing.

So the use of the knife and the fork, and the new custom of ceremony in dining, left the courts and found their way even into the humblest of homes. The new order of things seeped through the cities and into the smaller towns. Civilized man accepted table manners, but having them, he wondered how to use them. So originated the books on etiquette, manuals for the masses.

The Correct Use of Table Silver.—Table manners are still quite young, and man is by no means entirely at ease with them. In his own home and among his own kind of people he eats as he is accustomed, in the manner that seems most comfortable and natural to him. But let him

find himself among people of a different social caste, and he is conscious of a vague unease. He wonders if he is holding his fork correctly, if a spoon or a fork should be used for the melon, if olives may be taken with the fingers. Furtively he watches the others, and is unutterably pathetic in his embarrassment.

Books on etiquette lay particular stress upon correct table manners. The writers realize that nothing can reveal as quickly as one's table manners the environment and the habits of life to which one has been accustomed.

Spoons [says "The Book of Etiquette"] are used when eating grapefruit and fruits served with cream. Jellies, puddings, custards, porridges, preserves, and boiled eggs are always eaten with spoons. The spoon is used also with soup, bouillon, coffee and tea. In the case of the three latter beverages, however, the spoon is used only to stir them once or twice and to taste them to see that they are of the desired temperature. It is never allowed to stand in the cup. Nor is it permissible to draw up a spoon full of soup or coffee and blow upon it; one must wait until it is sufficiently cooled of itself.

Of course, rules such as these cannot possibly give exquisite table manners to one who has for a lifetime been accustomed to doing what is uncultivated and incorrect. Grace, poise, and ease come through practice and through association with cultured people. Etiquette is simply the master key that must be fitted to the lock and turned.

The greatest value of a book on etiquette is that it helps avoid conspicuous and embarrassing blunders. One cannot help being embarrassed if melon is served and one is not certain whether melon should be eaten with the fork or the spoon. It is not the most comfortable thing in the world to watch others for a clue. Books on etiquette tell what is correct according to the accepted standard.

Concerning knives and forks, "The Book of Etiquette" says:

The first rule to be remembered is that the knife is never used for any purpose other than cutting food. It is unforgivable to use a knife to convey food to the mouth.

The knife is held in the right hand and the fork in the left. When

the desired morsel of food is cut, the knife is laid aside temporarily and the fork is shifted to the right hand.

Custom has made this a rule in the United States; in most European countries the fork remains in the left hand and food is so conveyed to the mouth.

The foods eaten with the fork are meats, vegetables, fish, salads, oysters and clams, lobster, ices, frozen puddings, and melons. Hearts of lettuce and lettuce leaves are folded up with the fork and conveyed to the mouth. If the leaves are too large to be folded conveniently, they may be cut with the blunt edge of the fork—never with a knife.

Civilization has not entirely eliminated the use of the fingers in eating. We still have what are known as "finger foods." French artichokes, corn on the cob, lobster claws, celery, radishes and olives, raw fruits, bread, crackers, and some kinds of cake are taken in the fingers.

Origin and Use of the Finger Bowl.—Strangely enough, finger bowls, or their forerunners, have been in use from the time when infant civilizations were learning to enjoy the luxury of dinner-giving. Among the early Greeks it was considered ill-bred to sit down to table (or rather lie down to table!) at once; first there was a period of entertainment, then small ewers of water were brought in and the guests washed their hands. Not until they had done so were they ready to dine. The same custom seems to have prevailed among the Romans and Egyptians.

Among the Romans all guests washed their hands before and after dinner. Small basins were used for this purpose, and usually a flower or two was dropped into the water to make it fragrant. This is a custom which we seem to have borrowed from them, for modern writers on etiquette say, "A fragrant leaf may be added to the water" (in the finger bowl).

The Egyptian guest at a dinner party was welcomed by a special servant who anointed his head and washed his hands. Sometimes the process was repeated during the course of the dinner, which lasted several hours. Before leaving the table the hands were always washed, whether

for purposes of cleanliness or because of established custom we do not know.

The Hebrews made of hand-washing a sort of ceremony. Before eating the hands were washed; upon returning from a funeral the hands were washed before reëntering the home; before making burnt offering or sacrifice at the tabernacle the hands were washed. The Bible contains many laws concerning the ablutions required of the people of Israel.

And he set the laver between the tabernacle of the congregation and the altar, and put water there for washing. And Moses and Aaron and his sons washed therefrom their hands and their feet. (Exodus XL, 30, 31.)

The finger bowl, as we know it, probably made its first appearance in the 15th century. In 1455 at the Court of Anjou (third son of Louis II, King of Sicily) it was the custom to wash the hands just before leaving the dining room. It appears that during that year the custom became general and popular. For these ablutions, scented water—usually rose water—was brought into the dining room in ewers of precious and delicately wrought metals. Pages or squires handed the ewers to the ladies in silver basins to hold the water as it was poured over the hands.

From the Court the custom spread through the cities and was adopted by the wealthier and the fad-seeking classes. Finger bowls thenceforth appeared upon all fashionable tables. But instead of disappearing in the customary manner of the fad, the use of the finger bowl has remained and is to-day an accepted custom.

Whenever fruits are served the finger bowl should follow. It is always used at the completion of the dinner. The bowl is always filled with tepid water and set upon a plate. The fingers are dipped lightly in the bowl, one hand at a time, and then dried on the napkin. It is a mark of ill-breeding to splash the water about, to put both hands into the bowl at once, or to wet the entire palm of the hand. Only the finger tips should touch the water.

Setting the Table.—The ancient Greeks took great pride

in their table appointments. They used elaborate bowls and beautiful drinking vessels. From the *Odyssey* (IV, 614-18) we learn that the choicest gift that Menelaus could offer to Telemachus when he took his departure from his court was a richly wrought bowl such as the wealthier classes were then using on important occasions—as we use our choicest chinaware and finest silver on occasions of importance. We quote Homer's description:

Of all the chattels that my house contains,
The noblest and most beautiful, a bowl
Wrought deftly, all of silver, but with lips
Gold-sprinkled, by Hephæstus shaped and framed
Which Phædimus once gave me, Sidon's king.

The Greeks ate three meals daily, according to William Swinton. Their tables were uncovered, and they ate reclining on couches, using their fingers in primitive fashion. They had no knives or forks for table use, but spoons were fairly common.

Among the Egyptians the guests sat around a table and dipped bread into a common dish placed in the centre. This mode of eating from a common dish, widely prevalent among early peoples, still exists in Cairo and throughout the East.

A study of existing savage races reveals many peculiar contradictions, as, for instance, the case of the Niam-Niam. Here is a people hopelessly savage; the Niam-Niam are, or were until recently, cruel cannibals; they are known to desert their sick and their aged. Yet they have a strict etiquette regulating the reception of guests. And when several of them drink together "they are observed each to wipe the rim of the drinking vessel before passing it on."

One is impressed by the extremes of barbarity which are sometimes found among peoples who have some habits of culture and refinement. The Ahts are known occasionally to sacrifice one of their number to the gods; they desert the aged; they are cruel and savage. Yet after meals they invariably offer to the guest water and cedar bark for wash-

ing the hands and mouth! And they keep small mats of bark strips on which strangers can wipe their feet.

But as a rule early peoples, savage or semi-civilized, gave little thought to table appointments. They were more interested in the food than in the manner in which it was served. The Greeks and Romans were possibly an exception to this rule; but even they, gourmands that they were, looked to the contents of the dish before they concerned themselves with the dish itself.

As the centuries rolled by and the culinary art reached a high degree of development, table appointments began to show a new influence. Curious dishes, for holding spices and condiments, sauces and relishes, made their appearance. Even great artists, whose fame still rings in our ears, thought it not the least beneath their dignity to lend their genius to the painting of dishes and salt cellars. Tables became crowded not only with new kinds of foods—or rather, old foods served in different dress—but with new and elaborate appointments.

Only a quarter of a century ago it was still customary to load the table with all sorts of appointments—glasses, tiny dishes for olives and salted nuts, ornate silver bowls, napkin rings, hand-painted chinaware and enough forks, knives, and spoons at each place for at least a dozen courses! Scarcely a square inch of the white tablecloth showed through.

But to-day, good taste demands precisely the opposite. Nothing is placed on the table that is not actually needed. Services are of silver, and china is simple in design but of the finest quality. A centrepiece of glass, china, or silver is generally used, on top of which is placed the floral decoration. When adjusted, this floral centrepiece may be used as a mathematical base for all the rest of the table appointments.

The early colonists used tall, slender candlesticks on their dinner tables, because they had no other means of illumination. But we like to continue the old custom de-

spite electricity and its clever conveniences, because of the traditions that surround the mellow candle gleam, because of the romances and the memories that lurk in its ring of light.

And so we place four candlesticks equidistant around the centrepiece—stately guardians of the dinner table. And we light the candles just before the guests arrive. Between the candlesticks are located the salt and pepper dishes; and with this mathematical centre correctly arranged, we proceed to set the places for the guests.

The knives and spoons are placed at the right, in the order in which they are to be used. The proper number of forks is placed to the left. Not more than three forks should ever appear on the table at one place. This custom originated a century ago when the introduction of many new dishes threatened to swamp the table with forks. Etiquette writers then helped to establish the rule that no more than three forks appear on the table at one place, and that other forks be brought in as needed.

Saying Grace before Eating.—The custom of saying grace before eating did not originate as an expression of thankfulness. Early peoples offered prayer before eating, to avert any deleterious influence that the food might possess.

Primitive peoples sometimes made sacrifice to their gods before a feast to make sure that the foods upon which they intended feasting would not poison them or cause them injury. Probably out of this custom grew the later one of making prayer before every meal—a custom found among many savage races. The Mois of Cochin China always “ask for a blessing upon their food” before eating and drinking. The Tahitians and other South Sea Islanders offer a prayer before eating.

The Israelites appear to have been among the first to offer prayer before eating, *out of gratitude for having food to eat*. The Egyptians, a scrupulously religious people, apparently copied the notion from them. We find that

they rarely sat down to meals without saying grace; and, like the Israelites, they offered food to their gods before eating themselves.

Like the custom of saying grace, fasting has a primitive background. In primitive life, when a crisis of some sort was at hand, when it was necessary to coax food from an obdurate god or insure success in war, fasting was a means of magic persuasion. The savage did not fast because he liked to; we can be certain of that. He fasted to avoid danger to himself.

Out of this first custom of fasting to avoid danger and evil influences evidently grew the idea of fasting being good for body and nerves. Thus the early Christians referred to fasting as "a means to prevent evil spirits entering the body."

The religious element of fasting by no means began with the Christians. In India it was anciently the custom for fakirs to starve themselves and inflict upon themselves all sorts of bodily torture. This was a form of worship among them. The Eskimo are forbidden by their religion to make use of certain seals at certain times; and even though a community may be on the point of starvation, no one will kill one of the seals. One is amazed at the amount of self-control shown by these people whom we are inclined to think of as savages.

The Toast.—There are several different stories, all interesting, concerning the origin of the toast. Most authorities, however, are of the opinion that the custom of "drinking to the health" of a person originated with the practice of drinking first to show that the drink is not harmful. This little ceremony of drinking first would predispose the other to friendliness and good-will.

Among both the Romans and the Greeks healths were drunk to guests. Some writers say that the custom originated with the Greeks and was copied by the Romans, but of this we cannot be certain. We know that both drank healths, and that both had the custom of proving the wine

unpoisoned by having the host drink first. Neither a Greek nor a Roman would pass the cup to his friend without having first tasted of it to prove its safety. Thus drinking together came to be a sort of pledge to friendship and amity.

Roman gallants had a pretty drinking custom. Among them it was the custom to drink as many glasses of wine as there were letters in their sweethearts' names. For instance, Martial's bit of verse:

Six cups to Naevia's health go quickly round
And he with seven the fair Justina crowned.

A great many early peoples offered a goblet of wine to a guest the moment he entered the house, possibly as a sign of good-will. We have already seen how drinking together constituted a form of friendship among early races (see pp. 323-324). At the tables of the rich in early Egypt wines were offered to the guests before eating to excite the palate. The Chinese are said to have offered wine to guests before eating from the earliest times. Among the Romans, when a late comer was announced by the servants (yes, the early Romans and the early Egyptians both announced guests, even as we do!) he was immediately given a goblet of wine as a sign of welcome.

Before Volstead discovered America it was quite a general custom to offer a cocktail to a dinner guest before entering the dining room. The Greeks, the Romans, and the Egyptians set this happy precedent; Volstead destroyed it; but let us hope it won't affect our hospitality!

It was an ancient custom, not only to drink to healths, but to make oaths with food or drink. In Madagascar, for instance, parties taking oath drink together, each praying that the liquid turn to poison for him who breaks the vow. In Ceram it is customary to take oath by eating food in which a sword has been placed. The Timorese taking oath drink water which has been mixed with gunpowder and earth, saying, "May I die of sickness, by powder or the sword if I swear falsely." The Malays swear alliance,

truth, fidelity, etc., by drinking water in which daggers or spears have been dipped. Other savage peoples cut open a vein, mix the blood with water, and take oath with this horrid drink.

Doubt surrounds the true origin of the word "toast." One writer says that in the reign of Charles II a piece of toasted bread was dropped in the wine, and a wit, seeing that the wine had been quaffed, remarked, "If I cannot drink the wine, at least I can have the toast."

Others tell us that at Bath, during this reign, a celebrated beauty of the court of Charles was in the Cross Bath. One of the crowd took a glass of the water in which she stood and drank her health to the company. A gay fellow is said to have jumped up saying, "I like not the liquor, but I shall have the toast." Since then, we are told, it has been the custom to call this type of drinking a toast.

Still another theory concerning the origin of the word has been advanced. It was a general custom to drink by the fireside, bread being toasted while the men drank. Some writers believe that the word, in connection with drinking healths, originated in this way.

An entirely unrelated tale concerning the origin of drinking healths has been found, in which Edward the Martyr, who came to the throne of England in 975, figures. It appears that on the 18th of March, 978, the King was hunting in Dorset Forest, near the old Corfe Castle, where Elfrida lived. He decided to pay her a visit. Riding up to the castle unattended, he was greeted affectionately by the Queen and engaged in a conversation with her. She asked him to dismount, but he refused. Whereupon she handed him a cup of wine with her own hands, and while he was drinking caused him to be stabbed in the back. He died of his wounds.

This, we are led to believe, gave rise to a form of health drinking. It became customary throughout England when drinking at parties or dinners to pass around one large cup. Each person to receive the cup rose and drank from

it. The man beside him rose also, as his "pledge" to protect him from "being stabbed in the back as was the Martyr Edward." This was known as drinking health. The cup which went the round of the table came to be known as the "loving cup." Such cups came to be looked upon as the proper tribute of an inferior person to one of superior rank. The "loving cup" to-day is given to the winning team, to the individual or the club which proves itself superior.

Drinking toasts from a slipper dates back to the 18th century. In certain parts of Hungary it was the custom for a groom to drink a toast to the bride out of her slipper on the wedding night. The slipper was publicly removed, filled with wine and given to the groom. He made a toast to his bride, drank the wine and threw the slipper to the guests. The custom spread to other localities, and in the 19th century every gallant felt it his duty to drink a toast to some lady out of her shoe. To-day the custom is almost obsolete, having faded into the background with Elizabethan ruffs and Victorian "receptions."

Customs of Politeness.—"The hostess must see that all her guests are comfortable and well taken care of."

The early Romans and Greeks evidently followed this precept, voiced by a writer who came many generations later, when these twin civilizations were already dead, and forgotten by all save the student. The Romans rarely invited guests to their dinners, which were simple repasts; but they almost invariably had visitors at the most important meal of the day—the supper.

These early Roman suppers held from three to seven courses. The host gave each guest an exact list of the courses and all the dishes of which the feast was composed—a forerunner of the menu card. Each guest was presented with a wreath of flowers and was given a goblet of wine to drink.

The Roman host made every effort to please his guests and supply them with every comfort. At first chairs or

stools were used; but after their association with the Greeks and Asiatics, the Romans adopted the dining couch. Three of these beds, or couches, were placed at one table, the fourth side usually being left open to receive the service. Four people could dine comfortably from one couch. They were low, without backs and covered with rich fabrics. Some were in the shape of half-moons. The host sat at the head table with the guest of honour and his wife; the other guests took places at the other two tables according to rank.

The Greeks also provided carefully for the comfort of their guests. Servants brought in ewers of water as soon as the guests arrived so that they might freshen themselves. Like the Roman guests, they were given goblets of wine before the feast.

The Greeks ate reclining on couches, but usually one person to a couch and not several as among the Romans. They had no knives and forks, but water was provided several times during the course of the meal for washing the hands.

The Egyptians were fond of entertaining, and the Egyptian host delighted in pleasing and amusing his guests. Dinner was served at midday and supper at night. The food, the best that the host was able to afford, was placed in the centre of the table and the guests helped themselves. They were provided with comfortable couches on which they stretched for hours, eating, drinking, and enjoying the music and entertainments which the host provided.

When invited to a dinner, the ancient Egyptian brought his servants. One carried his stool, another his writing tablet, another his sandals. It was considered polite for the guest to bring with him whatever he would need during his stay.

Upon their arrival, guests gathered in the sitting room. The host and hostess sat side by side and each guest, as he arrived, approached them to receive their welcome and good wishes. Then he joined the others, was given a

goblet of wine, and enjoyed the music and dancing provided for his entertainment. Both the Egyptians and the Greeks considered it ill-bred to sit down to table immediately upon arrival. They felt that it was a form of politeness to assemble first for a period of chatting and entertainment. We still feel that it is somehow impolite to eat the moment we reach the house of a friend or acquaintance.

It is interesting to note that the host and hostess never entered the dining room until all their guests had preceded them. They considered it impolite to do so. With us,

The host leads with the lady who is to sit at his right; the hostess ends the "procession" with that lady's husband. If there is one more woman than men in the party, the customary thing is for the hostess to enter the dining-room alone after all her guests have entered.

The custom of "coupling" guests, that is, placing them at the table in couples, was introduced during the age of Chivalry. At about 1455 it became the custom to place a gentleman and a lady together, each couple having one cup and one plate, from whence comes our phrase "to eat from the same plate."

But the Egyptians, who invited ladies to their dinners, had a sort of double chair which followed the use of the dining couch. The single guest was permitted to occupy one of these chairs; but a married couple was obliged to share it. We see here a very early form of "coupling" guests.

Among the Egyptians it was a form of politeness to offer one another a flower from one's bouquet. The Greeks and Egyptians always had flowers at their parties, but it was the Egyptians who made the flowers tokens of friendship. Hostesses to-day like to have a small decorative bouquet at the place of each woman guest at their formal dinner parties.

In the United States and elsewhere, the guest is expected to taste of every dish served. Several writers suggest that this custom had its origin among the early Iroquois Indians.

Whether hungry or not, the Iroquois guest was obliged

to taste of every dish presented to him. He was also expected to say "*Hz-ně-a-weh*," which means "I thank you." To refuse a dish was to indicate enmity.

Similarly, among certain tribes of Siam—notably the Steins, a Shan tribe—a visitor was expected to eat whatever was set before him. He was expected to drink out of the common cup through his bamboo tube. If he neglected to do so he was usually killed, for the others suspected him of being an enemy. Even to-day the stranger who refuses to eat what is placed before him takes the risk of being knifed before he has gone very much farther.

Among civilized peoples it is considered ordinary politeness to taste of each dish served. "The Book of Etiquette" says,

It is better to accept a little of each course on one's plate and eat a bit of it although one does not particularly care for it, than to refuse it entirely.

Which brings to mind the old pressing hospitality of the French bourgeois which seemed to spread everywhere. The hostess heaped food upon the guest's plate, assuming that the guest was too timid to ask for it himself. This was a form of vanity, of course, induced by the selfish desire to see one's good things appreciated. Some hostesses carried this custom to such extremes that the guest was obliged to turn his plate upside down. It is still a custom to-day, when a course is completed, to place one's knife and fork on the plate to indicate that one has had sufficient.

But the old pressing hospitality is gone and is rarely, if ever, to be found among the fashionable and well-bred classes. Nevertheless, books on etiquette still find it necessary to admonish:

Ten-course dinners are quite out of fashion, and the "groaning board" belongs to the past. The correct hostess of to-day does not take the attitude that the guest has come to her home half-starved.

And again:

To insist, on the part of the host or hostess, after the guest has refused a second helping, is overdoing the bounds of hospitality, and perilously borders on the verge of incivility.

Whom to serve first is a problem of great concern to the modern hostess. In some homes the hostess is served first; in others the guests are served before the hostess. Both forms are correct, but it is interesting to note their origins.

It has always been the custom among savage peoples for the host to take the first bite or drink, to "take the fetish" from the food. In other words, he proves by taking the first bite that the food is safe and unpoisoned.

In the Banks Islands it has always been the custom for the host to take the first bite of any food, to take any risk of poisoning upon himself. In New Guinea it is a mark of courtesy and friendship to offer water to a stranger; but before presenting it the natives drink themselves to prove that the water is not dangerous in any way. Among the Basutos, when food or drink is offered to a guest and he is in no doubt as to whether or not it is safe, he may ask the host to eat first. The host, out of politeness, is obliged to do so. Similar customs are to be found in Central Africa, among the Damaras, among the Iddahs, among the Zulus. In Soudan the housewife always takes the first drink of any beverage to "take the fetish" off it. Throughout the Middle Ages, when it was a simple matter to dispose of one's unwelcome guests by poisoning, polite hostesses served themselves first to prove that *their* food at least was safe to eat!

But as civilization advanced, courtesy came to mean more than tradition, and gradually the custom of serving guests first came to be recognized as a form of politeness. Yet even to-day we find in many homes that the hostess is invariably served first. Custom lives on long after its original meaning or purpose has been forgotten. In fashionable homes, however, preference is usually given to the more polite form of guests first.

From a 17th-Century "Civilitee."—We have previously mentioned two rare old *Civilités* which are now in the hands of an English art collector (see p. 111). There are in one of these volumes, dated 1695, many rules of etiquette concerning manners at the table, and we are able to glean from them an interesting picture of table manners in the 17th century. We know you will find some of these rules amusing.

Here, for instance, is one bit of advice. "One ought sometimes to look off the meat, yet without looking on the meat which is before others." Dinners must have been most lively affairs in the 17th century!

The guest is further admonished that "he must not lick his fingers or wipe them on the bread." A later *Civilité* (1782) reminds the fashionable hostess that "viands are served with the fork and not with the hand."

We are led to wonder what sort of soup was served in the 17th century when we read, "Do not try to eat soup with a fork." Evidently table forks were so new that people did not know just how to use them.

According to the *Civilité*, when a lady drank at the table an attendant stood beside her and held a napkin under her chin. It was only at the tables of the wealthy that every guest had an individual glass. These glasses were not placed on the table but were ranged on a sideboard. Guests were obliged to call for the drink as they desired it. It was only about the middle of the 18th century that the glass found its way to the table and took its place at the right of the guest.

Our *Civilité* takes great pains in warning the guest not to criticize the host's viands. To do so, we are informed, would be both ill-bred and impolite. Modern books on etiquette voice the same thought.

Guests washed their hands before dining, and the *Civilité* naïvely suggests that "a dry corner be left [on the towel] for the person who is to use it afterwards."

Among other things, the guest is exhorted not to scratch

himself in company, not to snuff the candle with his fingers, not to blow in his soup, not to return the meat to the dish after smelling it. He must not pocket the fruit at dessert, and he must not put a second morsel into his mouth before the first has been swallowed.

Persons of good breeding never swallow before masticating [we are told]. If the plate before you is not quite clean do not scrape it with your fingers; ask for another. Make as little noise as possible in swallowing. Do not pile up your plate till it will hold no more. Do not on any account clutch your plate as though you feared that someone would snatch it from you.

We wonder how our etiquette books will seem to those who read in 2200!

Conversation at the Table.—Louis Étienne St. Denis, in his personal recollections, gives us some very interesting sidelights upon the personality and upon the social life of the great Bonaparte. In his book, "Napoleon, from the Tuileries to St. Helena," (translated from the French by Frank Hunter Potter) he tells us how important the Emperor's dinner hours were to him and how he liked to fill them with light, gay conversation. He always liked dinner served early, and he always invited as guests those whose conversation he enjoyed. Subjects of importance were rarely discussed at his dinner table; he was fond of gay witticism and jolly "drawing-room conversation." He found such conversation a great relaxation.

Most frequently when the Emperor came out of his room he would be accompanied by some important person—a Minister or someone—with whom he would continue his conversation till the Empress arrived, for when she was present all serious discussion was banished and playful chat took its place.

The Egyptians were among the first to realize the pleasures to be derived from dinner-hour conversation. The Egyptian host felt it his duty to keep the conversation interesting and animated, and the guests felt it their duty to respond.

But on the contrary, most early peoples ate in silence,

and there are even to-day certain peoples who never talk while at their meals. The Japanese, Chinese, and other Orientals eat in silence. The Ahts, Maoris, Siamese, and Hindus rarely talk when eating. The Arabs of Syria mutter a *Bismillah* before eating, then take their meals in absolute silence. The Buddhist priests say that "to eat and talk at the same time is sin."

Everything is relative, however, and social life is something like a moving picture. The scenes change as the story develops, but the plot remains the same. Thus, a quarter of a century ago any Southern gentleman would have told you that the carving of a chicken or a duck was an art, and an art which every gentleman must possess. Yet to-day in almost ninety-nine families out of one hundred the carving is done in the kitchen, simply because it has been found more convenient and expeditious. Fifty years ago a young woman was considered well bred when she knew how to enter a drawing room correctly. To-day, instead of carrying books on her head in practice to gain poise and haughty bearing, she opens the books to find out what is inside. And instead of sitting demurely near her chaperon until someone invites her to dance, she uses the information obtained from the books to ensnare the handsome young college professor and engage him in an animated conversation concerning Palæolithic fossils, or perhaps the theory of relativity!

And so, too, has it been with dinner conversation. Among some peoples it was, and is, customary to eat in silence. Among us it was at one time customary to bar all intellectual conversation at the dinner table and "engage in simple, pleasant, light talk that everyone can enjoy."

To-day the clever hostess chooses her guests carefully, with a regard for their tastes in talk as in other things, and she permits them to introduce whatever subjects they themselves enjoy talking about, whether it be the latest Parisian fad or the newest best-seller. She makes no attempt to "lead" the conversation unless she finds it lagging. And if

the talk veers to things intellectual and her guests discuss the possibility of life on Mars, or of Japan joining other lost lands for ever at the bottom of the Pacific, so much the better! It is a reflection upon her good sense in inviting guests; for only a well-selected group of people can begin, and carry on for any length of time, an interesting intellectual discussion.

The first rule, then, is to choose your guests well. The rest will follow.

CHAPTER XIV

HOLIDAYS AND THEIR CUSTOMS; HOW THEY ORIGINATED

Our harvest being gotten in, our governor sent four men on fowling so that we might after a special manner rejoice together after we had gathered the fruits of our labours. They four killed as much fowl as with a little help beside served the company about a week. At which times among other recreations we exercised our arms, many of the Indians coming amongst us, and among the rest their greatest king, Massaroyt, with some ninety men, whom for three days we entertained and feasted, and they went out and killed five deer which they brought and bestowed on our governor, and upon the captain and others.

—EDWARD WINSLOW (to a friend in England).
December 11, 1621

THE PLAYDAYS OF HUMANITY

MAN was once free as the birds. He jumped and danced and shouted as his instincts prompted. He slept when the sun made him drowsy and ate when he found his food. He laughed at the dancing moonbeams. He beat his breast in proud defiance of the rain. He jumped in glee from stone to stone, rocked wildly from the limb of a tree, gave animal vent to the instincts and impulses that crowded through him. So, short and happy, went the span of his life.

Then came civilization. Life was cut into slices and handed to some on a silver platter, to some on a wooden spoon. The powerful cut little squares from the heart of the universe and called them laws. Factories and offices grew where forests used to be. Days were divided into hours, each hour with its special duty. Man stifled his natural instincts, and walked silent with the masses.

But beneath the smoothness that is civilization there smoulders a great unrest. Man longs for the freedom that once was his. Sometimes, while civilization still was young,

that longing became intense and mass madness resulted. The many trampled upon the few. And the few, being wise, created holidays.

We are taught that these great playdays of humanity are really holy days, special days set aside in which to honour some person or some memory, which is, of course, partly true. But we cannot help seeing that these holidays—playdays—are brief periods during which the mass spirit frees itself from the shackles of life, and dances as it did when the world was young.

Festival days have been set aside and observed in all ages, and among practically all peoples. Writers tell us that such-and-such a holiday was established because of some event connected with the religious life of the people, or some great natural event such as the return of spring. But these are the excuses, not the causes. The one great cause is that man needs regular playdays, fun days. He has not yet learned to stifle his natural instincts without brief periods of freedom.

The ancient Druids celebrating May Day by building huge fires and dancing wildly around them; the joy-crazed Paris mobs celebrating the Festival of the Fools in the shadow of Notre Dame; the English peasantry kindling fires, roasting nuts, and making merry though ghosts walk abroad on Hallowe'en—are they not all but glorified forms of "mob relief"? Can't you almost hear the revelling masses take a deep breath as they throw off the grim realities of their daily life, and play?

We of a later and more artificial civilization have learned to control a little better than our forefathers the instincts and impulses that crowd through us. Therefore, our festival days have less madness, more dignity. But they are, nevertheless, playdays, no matter what religious or reverential significance we may choose to attach to them.

The earliest festivals appear to have been connected with the dead. Among primitive peoples, when a death occurred, fires were kindled and drums were beaten to

frighten away the evil spirits. Gifts were made to the dead man to carry with him to the next world, and offerings were made to the gods. Thus death was the occasion for a sort of festival. Often feasting and dancing accompanied other ceremonies.

Later festivals came to be connected with the sun and the moon. The moon particularly, because of its changing aspects, inspired many forms of worship and festivity in man. In some parts of New Britain it is even now the custom to bow to the new moon. In the Hervey Islands superstitious people plant their cocoanuts at the full of the moon, sometimes with festivity and celebration.

Then came the celebrations connected with seed-time and harvest-time, festivities for the changing seasons. The Romans celebrated Lupercalia in spring and Saturnalia in midwinter. These two holidays were marked by games, amusements, the exchange of gifts. The Greeks had feasts to celebrate the two most important seasons of the year—harvest-time and spring-time. These two seasons symbolized to them the time of plenty and the time of promise. In their festivals they honoured the god of the vineyard, Dionysus (Bacchus). To show their worship they danced, sang, and made sacrifice. At the winter festival, bands of revellers marched in high glee through the village, chanting rude choruses.

These early festivals were, in a sense, religious. Feasting was a part of the celebration and the good things were shared with the gods. But it was not a religious instinct that inspired the celebration in the first place; it was a natural instinct. We can understand how the sudden beautiful flowering of nature in the spring, how the rich bounties of harvest-time, would have created a certain joyousness in the multitudes. And this joyousness inspired the ancient festivals which survive in our May Day and Thanksgiving.

Holiday meant originally holy day, since the gods played a conspicuous part in the festivals. The holiness of the holiday has survived to a great extent, particularly in such

holidays as Easter and Christmas. But fundamentally the holiday is a day of merrymaking and celebration.

Political holidays, holidays celebrating a momentous victory, the beginning of a new period, or the birth of some great leader, are all of a later growth and belong to a more advanced stage of progress. With their advent we sense a new element entering into the holiday spirit—sentiment. Sometimes it is the sentiment of one person, or perhaps of one party or class; more frequently it is the sentiment of the nation, of the people.

Holidays Celebrated in the United States.—The manner in which a people observes its holidays is an excellent reflection upon the character of that people. The Japanese with their *O Hina Sama* (Dolls' Festival) show an inherent love of children. The French with their *Poisson d'avril* (April Fool) show an appreciation of the practical joke. The Chinese with their Festival of the Dragon Boats (at New Year) show a love of the grotesque, the unusual, the magical.

In the United States holidays have a certain dignity. There are no legal national holidays, although Congress does name special holidays, and it is the privilege of the various states to make them legal.

Practically all states make New Year's Day legal. Other holidays made legal by state action are:

Washington's Birthday	(Feb. 22)
Memorial Day	(May 30 in North, April 26, June 10 in Southern states)
Independence Day	(July 4)
Labour Day	(First Monday in Sept.)
Thanksgiving	(Last Thursday in Nov.)
Christmas	(Dec. 25)

State action sometimes makes these popular holidays legal:

Arbour Day	(Fixed by governor)
Lincoln's Birthday	(Feb. 12)
Flag Day	(June 14)
Columbus Day	(Oct. 12)
Armistice Day	(Nov. 11)

There is still another class of holidays, entirely different from those mentioned above. They have no legal recognition. But, with their customs, they are firmly rooted in the folklore and the traditions of the people, and they continue to be observed from one generation to another. These holidays are:

Valentine's Day	(Feb. 14)
St. Patrick's Day	(March 17)
April Fool's Day	(April 1)
Easter Day	(Usually in April)
May Day	(May 1)
Mother's Day	(Second Sunday in May)
Hallowe'en	(Oct. 31)

Let us see precisely how these holidays originated and what the customs connected with them—customs we still religiously observe—mean. We will start with New Year's Day and trace each holiday to its source. And we will concern ourselves not only with the origins of these holidays and their interesting customs, but with modern methods of entertainment and celebration.

NEW YEAR'S DAY

The custom of celebrating the New Year is very old. Some accredit it to the Chinese, some to the ancient Germans, some to the Romans.

The Chinese have always made of the New Year an extravagant and elaborate celebration. They have, at the New Year, their Feast of the Lanterns, their gay Festival of the Dragon Boats, their Fisherman's Festival. Their New Year begins several days later than ours, and the attendant celebrations last over a period of days.

The New Year of the ancient Germans was established as a result of the changing seasons. At first the German year was divided simply into summer and winter, one winter and one summer being counted a year.

It is important to remember that the German winter actually began about the middle of November, which was

the period when the ground began to freeze. About this time, which was the time of flock-gathering and harvesting, the people were inclined to celebrate with feasting and festivity. We can understand their joyousness at gathering together, after the separation and work of the summer months, building fires, enjoying the fruits of their harvest, enjoying above everything else their brief span of freedom from toil.

Thus the ancient Germans came to look upon this period as the beginning of the New Year—the putting aside of old troubles and old worries, the welcoming of new duties and the promise of new bounties. The change, very naturally, was one to be celebrated with feasting and merrymaking. This original New Year's festivity would have taken place about the end of November when winter was beginning to set in and the harvest was garnered.

Then came the invasion of the Romans. And though the old German division of the year with its quaint festivities is still observed in rustic localities, the New Year came to be celebrated on the first of January.

The early Romans made much of the New Year. To them it symbolized the putting aside of an old life, the taking up of a new. They presented one another with branches of trees as tokens of good luck for the coming year. Some authorities are of the opinion that the custom of decorating houses and churches with evergreens at this period of the year originated with the old Roman practice of presenting tree branches.

Savage peoples greet the beginning of a new year with great rejoicing. Among the Zulus the opening of the year is celebrated with the Feast of the First Fruits. The men are gorged with the flesh of the bull or ox, they are feasted and fêted, that they may be strong and prosperous during the coming year.

The Cherokees have an elaborate New Year's festival. On the day that the new year is supposed to begin they build huge fires and burn all the old clothes and utensils.

The cabins are made scrupulously clean. Old fires are extinguished, the dirt removed, and new fires built in their place.

The following day the festivities begin. Everyone wears new apparel; new corn is cooked; new beads and head-dresses are displayed. Everything old is cast aside, to symbolize the passing of the old year.

For three or four days there are music, feasting, and ceremonious dancing. Visits are made to neighbouring villages. Prisoners are pardoned. Everyone rejoices that a new year is to begin, and that he has been favoured by the gods and permitted to live on in this next year.

It is a most colourful and picturesque celebration and it gives us an excellent idea of the common notion concerning the New Year. The multitudes recognize the period as an auspicious one for beginning all over, starting a new lease on life, casting off the old and welcoming the new. That they celebrate with feasting and merrymaking is natural enough, knowing what we do of human instincts.

The New Year's Resolution.—The New Year's resolution undoubtedly had its origin in the notion that the coming year represented an entirely new period of life to the individual, with which he might do as he pleased. What was already passed he put out of his mind, for it was something over which he had no control. But on the coming year he concentrated in earnestness. It spread out like a golden vista before him. It was a period of promise. And he probably found himself making solemn avowals concerning what he would do with his next year of life.

In ancient England it was the custom to clean out the chimneys on New Year's Day so that luck could descend and, of course, remain all year. With us it is customary to speak of "cleaning the slate" (of life) and making good resolutions so that the "slate" will remain clean throughout the year.

The making of New Year's resolutions became quickly a common practice. We can understand why a custom such

as this would appeal to the popular fancy and remain throughout the generations. To a mass mind, no period of the year could be more timely for a change in one's mode of living than that period which represents the beginning of the year. A new year—a new life.

The New Year's Gift.—The exchange of gifts at New Year's probably had its origin in the desire to invite prosperity during the coming year. First the gifts would be to the gods, with a little prayer that one may be happy and prosperous during the year. Then the idea would expand, and gifts would be exchanged promiscuously.

The ancient Romans were accustomed, at New Year's time, to present small gifts to the senators under whose protection they were placed. Here again we see the desire to invite safety and protection during the coming year by making gifts. The Romans also gave one another branches of trees as tokens of good luck for the year, as we have already seen (see p. 394).

The Persians have a custom of presenting one another with eggs on New Year's Day. The egg, of course, typifies creation, the beginning of life, and hence, the beginning of a new period of life. The same thought is conveyed by our Easter egg, as we shall presently see.

In France and Spain, New Year's Day has always been the proper time for exchanging gifts. The people make calls upon one another, extend their good wishes for the coming year, and make small gifts. From the earliest times, and always throughout the ages, the exchange of gifts seems to have prevailed to a greater extent at New Year's than at any other time.

The kinds of gifts have varied at different times and among different peoples. For a long time the glove was considered the appropriate New Year's gift. In more recent times the box of candy has become popular. Calendars are peculiarly appropriate because a new calendar is needed at the beginning of a new year. The book, too, has become a popular New Year's gift; and lately there

appears to be a tendency to sign up a friend's name for a year's subscription to a magazine, as a New Year's remembrance.

The Round of Calls.—Since the days of the early Romans when it was customary to visit the senator under whose protection one was placed and carry him a New Year's gift, it has been customary to make a round of calls on this day—or at least, at this period of the year.

Among the Chinese, the New Year's call is carefully regulated by caste. The men receive calls from those who are acknowledged below them in the social scale, and they in turn make calls upon those above them. It is not necessary with them, as it is with us, to return calls.

The early English never failed to make calls on New Year's Day, for the purpose of expressing their good wishes for the next twelvemonth. It must have been curious, indeed, to see the villagers trooping from house to house, in one and out another, to pay their calls. We wonder how anyone found anyone else at home!

The custom of making a round of calls on New Year's Day was brought to us by the New Amsterdam Dutch. These people, whose hospitality, particularly on New Year's Day, was limitless, taught the New Yorkers the custom of calling upon one another to offer good wishes for the coming year. And for several centuries New York observed this social custom, discontinuing it only recently. To-day the New Year's call is not an absolute necessity, though some people like to observe it. The round of calls is quite out of fashion, however; it went out with the victoria and the bustle.

In an account of a New Year's Day in Colonial times, Marquis de Chastellux tells how a hundred or so young people assembled under his windows, fired several shots from their muskets, and knocked on the door. The landlord was obliged to give them some of the Marquis' wine and some money before they would leave. The account reads, in part:

I learnt from my landlord that it was the custom of the country for the young folks, the servants, and even the negroes to go from tavern to tavern, and to other houses, to wish a good New Year, and ask for a drink, so that there was no particular compliment to me in this affair. In the morning, when I went to take leave of General Clinton, I met nobody but drunken people in the streets.

The accepted method of "wishing a good New Year" is to clasp hands and say cordially, "A happy New Year!" Other peoples have different modes of expressing the same thought. The Chinese, for instance, say "*Sui-hi*," which means, "May joy be yours."

Waiting for the Chimes.—We all like to sit up on New Year's Eve and listen for the chimes that "ring out the old, ring in the new."

This custom of ringing bells on New Year's Eve originated in England long ago. It was customary to ring muffled bells just before twelve o'clock, and at twelve to remove the wrappings and permit the bells to ring out loudly. This symbolized the thought that the old year was weak and feeble, that the new was strong and powerful.

"Of all sounds of all bells," says Charles Lamb, "most solemn and touching is the peal which rings out the old year." We like to hear the bells peal out the news that the New Year has started. It seems a death knell to the old year—a welcome to the new. And while the echo of the chimes still lingers in our ears we are making our resolutions!

The ringing of a bell has been, from the very earliest times, a method of announcing death. Even early savages beat upon drums or rang bells to announce the fact that one of their number had died. The ancient Egyptians believed that bells tolled at the time of death kept spirits from wielding an evil influence—upon the dead and upon the living. The superstition found its way to Italy, to Scotland, to Ireland, to England. In Paris hundreds of years ago it was the custom to ring the bells of Notre Dame whenever a prisoner was led to execution. The ring-

ing of the bells on New Year's Eve was apparently intended to announce the death of the old year.

We sit up and wait for the chimes because of an inherent curiosity that has been bred in us for many generations. We don't want to miss anything. And we have a secret little superstitious feeling that something, anything, might happen on New Year's Eve. Our early Anglo-Saxon ancestors climbed to the roof on New Year's Eve, "to see what would happen when the New Year came in."

The New Year's Din.—In Petrograd it was at one time the custom to usher in the New Year with a cannonade of a hundred shots fired at midnight. Various Scandinavian cities still celebrate the advent of the New Year with the noise of firearms.

The early savages always had noise and din during their periods of celebration. In various sections of Australia the bullroarer is used (pp. 181-182). This is a peculiar instrument made usually of a bit of wood, and it makes a low, sharp, whirring noise that grows louder and louder as the instrument is twirled around rapidly on a string. The bullroarer was, and is, used as a sacred instrument in religious ceremonies, and its use has spread to New Mexico, New Zealand, and Africa. It was known to the ancient Greeks; it became the plaything of the peasant boy of early England.

The horn is the bullroarer in modern celebrations, particularly in the United States. On New Year's Eve the street revellers have horns of every size and description with which they make a great din—much to the satisfaction of their savage instincts.

How the World Celebrates the New Year.—Every country celebrates the New Year in its own way. In several countries, the New Year's celebration is the most important of the year, for instance, in France and in Scotland.

To the French the New Year is a more important holiday than Christmas. It is true that the peasant child places its *sabot* on the hearth for a gift at Christmas time; but it

is not until the New Year that the adults exchange gifts among one another. The first three days of the New Year represent one of the most important social seasons. There are parties and gay entertainments. People stop one another on the street to extend good wishes for the year. And there is a great deal of informal visiting.

Scotland still retains the custom of "open house" at New Year's. There is a quaint old superstition among the people that he who is the first to visit a family in the New Year will be lucky and prosperous throughout the year. Therefore, everyone visits everyone else on New Year's Eve, revellers usually making a scramble to be "first foot," as it is called, when the clocks strike twelve. The more dignified make their calls on New Year's Day.

The midnight revellers in Scotland always carry with them, as they go from house to house, boxes of cakes and spiced ale. At each house the host is regaled with a bit of the cake and a sip of the ale. No guest enters a friend's house empty-handed, for to do so would be to frighten away prosperity for the year.

The Chinese celebrate all their holidays for the year at once. At the beginning of their New Year, they shut down all industry and close their shops for a period of several days. During this period they parade the streets in brand-new clothes, exchanging good wishes with everyone they meet. Sometimes in rural sections they carry tiny ornamented boxes of tea, which is considered an ideal New Year's gift. The box of tea is supposed to invite prosperity not only to him who receives it but to the donor.

During their celebration the Chinese have fireworks and gay revelry. There are feasting and funmaking from dawn until long after dark.

The Japanese have very gay New Year's celebrations. Every gatepost is ornamented with pines and green bamboos, and red lobsters hang over the doorways. Scarlet tangerine-like fruits are also used for decoration. The pines, bamboos, and lobsters are symbolical of long life,

strength, and happiness; the fruits are symbolical of prosperity.

No matter how poor he may be, every Japanese on New Year's Day dons a new suit and visits his friends. They in turn visit him, and there are many parties and entertainments. Even strangers accost one another on the streets during the New Year's festivities to exchange good wishes for the year. The Japanese celebration generally lasts for three days.

In the United States, New Year's Day is celebrated in various ways. There are many who still observe the old custom of "open house" and make a round of calls on this day, although as a general custom this is now practically obsolete. Each rural district, each city, has its own peculiar customs, its own methods of celebration. On New Year's Eve there is usually a great deal of street revelry, dancing and theatre parties, private dinners and public banquets. Each church has its own New Year's "watch-night" services—a custom borrowed from the Hebrews whose great watch night, Passover, ushers in their New Year.

But in the United States, as everywhere, the New Year is a period of social activity. There are parties and entertainments of every nature. To entertain at a dinner or a dance seems the proper way to usher in the New Year.

Some Suggestions for Entertainment.—Many hostesses, particularly in Chicago, New York, and other big cities, plan jolly midnight supper parties for New Year's Eve. Sometimes the parties are held at hotels or restaurants, for the convenience of the hostess and the entertainment of out-of-town guests. Frequently they are held at home, the drawing room and dining room being decorated with bells and winter greens for the occasion.

If it is to be a midnight supper, the guests do not assemble until about nine o'clock. The hostess who is wise arranges some sort of entertainment so that interest will not begin to lag at ten o'clock or so. There are many appropriate New Year games from which she can select.

An amusing New Year's game is called "I Resolve." Each guest is provided with a sheet of paper and a pencil. On the paper he is required to write a list of ten New Year's resolutions—whatever silly, foolish things occur to him, such as:

"I resolve not to wear a high silk hat when I go to church."

"I resolve not to marry until I am twenty-one."

"I resolve, during the coming year, to live up to my ideal—Charlie Chaplin."

These lists are folded and placed in a hat or jar. Each person draws one out in turn, and in turn reads his list to the assemblage. There is much laughter, of course, as the resolutions always seem funnier when applied to the person who is reading them.

After all the resolutions have been read, a vote is taken and the cleverest list of resolutions passed upon. The person who wrote the list is then requested to step forward and receive his prize—a handsome calendar. To the one who read the list is awarded the booby prize—a tiny bisque "kewpie" doll with an inscription of the year across it.

An enjoyable game to play at about eleven o'clock is called "Ghost." One of the guests is blindfolded and he or she must sit in the centre of the room. One by one the guests pass before the blindfolded "King Ghost" and recite a bit of verse or sing a little tune. They may disguise the voice in any way they like. The "King Ghost" must call out the name of the person who is reciting or singing, and until he does, the reciting continues. All the guests are "ghosts" and continue to be "ghosts" until their names are guessed correctly.

The guests enter the dining room a little before midnight. Each guest finds at his place when he enters a horn, whistle, bell, or other "noise-maker" for use in ushering in the New Year. It is interesting to have place cards in the form of pasteboard bells, of the kind that can be purchased from most stationers. On the back one might inscribe this pertinent sentence:

Use *this* now; save the others until midnight!

A menu that is always appropriate for the New Year's supper is: Hot bouillon in cups, chicken or turkey salad, nut-bread sandwiches, fruits, cakes and candies. Of course there must be plenty of nuts—for nuts are an age-old symbol of bounty in connection with the New Year. During the Christmas and New Year's season magazines usually carry interesting entertainment and menu suggestions. They are recommended to the hostess who is in doubt.

A popular form of entertainment on New Year's Eve is the masquerade ball. Clever and opportune innovations are seen in such costumes as "Hard Times," a fool's gown covered with newspaper headlines, worthless stock, tape from the ticker, etc.; "Mr. Old Year," wearing a long gray beard and carrying a scythe and an hour-glass, to be discarded at the stroke of 12; "Good Resolutions," a "professor" wearing blue glasses, a loose black robe, and carrying a huge roll of manuscript from which dangles an enormous pencil. The guests usually unmask at midnight.

The theatre party is also popular, and is becoming more and more so, particularly among people who entertain out-of-town guests. It is interesting to have dinner at one of the hotels in town, attend the theatre, join the revelling mobs after the play for a half-hour taste of street celebration, and return home just in time to crack nuts and roast apples around the fireplace while the New Year announces its arrival.

LINCOLN'S BIRTHDAY

The custom of celebrating birthdays of individuals appears to have originated in Egypt. The birthdays of kings and queens, of important persons and of the gods were celebrated with feasting and merrymaking. According to the Old Testament, Pharaoh, king of Egypt, celebrated his birthday with a feast; according to the New Testament, Herod did likewise.

The early followers of Christ, however, did not favour

the celebrating of birthdays. They conceived it no benefit to be born, and they saw no reason for making a festivity of the occasion. To them, birth was the entrance to a hostile world, the beginning of a life of oppression and persecution; death was the release from that life and the beginning of eternal peace and glory. Later, when Christianity swept the world, there was a reversal in this as in other things.

America has always remembered the birthdays of its great men—to honour them. February, a red-letter month, has two such famous birthdays.

There is February 12th, made glamorous with the romance of Lincoln's life, tinged with memories of one of the most powerful and pathetic figures American history has known. We need not eulogize Lincoln; every school-child knows his glory.

Lincoln's birthday has been observed ever since the great man was martyred. He was born on February 12, 1809, and was killed by an assassin on April 14, 1865. We remember him best as the genius who guided the country through four years of Civil War, keeping the union together when dissolution seemed inevitable; and for his Emancipation Proclamation which freed every Negro slave in the United States.

State action sometimes makes Lincoln's birthday a legal holiday, but whether legal or not we like to observe February 12th. Of course, whatever celebrations we have on this day are of a dignified and solemn character. Gay frivolities do no justice to the memory of our Lincoln.

Celebrating Lincoln's Birthday.—A tea or a dance or a musicale will do for any day of the week, but bring out the best china and the best silver in honour of Lincoln!

The Lincoln Dinner offers endless opportunities for cleverness in menu and in decoration. For the table centrepiece one might use a bust of Lincoln draped in the flag. Or one might use a miniature reproduction of Lincoln's birthplace—a decoration which was very popular on dinner

Jazz in its native environment. African boys with native and European musical instruments.

tables toward the close of the last century. These miniatures can be purchased at stationery and novelty shops, or they can be made at home from cardboard, covered with brown crêpe paper and tinted with water colour to give the effect of logs.

Innovations in food, relevant to the occasion, may be introduced. There may be a cake, for instance, boasting twelve tiny silk flags, in honour of the twelfth. There may be ices shaped to simulate the forage caps of Civil War soldiers, the baskets used in cotton-picking. There may be little gingerbread cookies, baked and iced to look like pickaninnies.

When young people are entertained at a Lincoln Dinner, an interesting game with which to amuse them is called the "Emancipation Proclamation." It is nothing less than a glorified donkey game. A sketch of Lincoln is made with charcoal on a sheet and pinned against the wall. Several "proclamations" are made of paper, numbered, and distributed among the guests, who are then blindfolded and proceed, in the way of the game, to pin their "proclamations" all over Lincoln—every place but the right place. The person who pins the "proclamation" closest to Lincoln's outstretched hand receives a prize.

Readings from the boyhood of Lincoln are always interesting after a Lincoln Dinner. The early handicaps of poverty, the struggle for knowledge, the youth that will go down the vista of years as an inspiration to all generations of youth, the war-time trials, the murder at the theatre—all make fascinating reading.

VALENTINE'S DAY

Far back in folk and village customs the festival of February 14th originated. No one knows precisely how. No one knows its true significance. The Valentine festival appears to be a day of fun, dedicated to the little fellow with the bow and arrow whom we call Dan Cupid. To-day the

holiday is almost obsolete, but at one time it ranked with Christmas and the New Year in importance.

Most authorities are agreed that the festival is named for St. Valentine, known as "the lovers' saint." Some writers, however, are inclined to believe that no such person as St. Valentine ever existed, although there appears to be ample proof that he was a Christian Bishop in the 3rd century after the death of Christ, and that he suffered martyrdom under the Emperor Claudius on February 14, 271 (A.D.).

The story is that Emperor Claudius, at Rome, issued a decree forbidding marriage. Married men were loath to leave their families for war, and they did not make good soldiers, according to the Emperor's notion. Since good soldiers were needed in warfare, he decided that marriage must be abolished.

The good priest Valentine heard, and was sad. He invited young lovers to come to him and secretly married them. The Emperor learned of this and had Valentine dragged to prison. There the "friend of lovers" languished and died, a martyr to love.

The Church was busy at that era replacing heathen divinities by ecclesiastical saints, and it is not surprising that they made a saint of Valentine, and allotted the day of his death, February 14th, to him. Nor is it surprising that the Roman youths and maidens for whom he gave his life set apart the day in which to do him honour. St. Valentine's Day came to be known as "the day for all true lovers."

A pretty origin, and one which is very possibly true. But there does not seem to be any way of definitely authenticating the story. We must accept the tale tentatively until someone can come forward and offer a true, proved origin. Valentine, and the day named in honour of his memory, are both shrouded in obscurity.

Origin of the Valentine Favour.—There is a quaint old tradition, prevalent still in some rural sections, that "birds

choose their mates on St. Valentine's Day." Shakespeare alludes to this tradition in his "Midsummer Night's Dream."

In the Middle Ages it was customary in England, Scotland, and parts of France for the young people to assemble on the evening before Valentine's Day and draw names by chance. Each person drew a slip—a "valentine"—from an urn or bowl, on which was written the name of one of the young people present. The person whose name was on the slip became the holder's sweetheart for the year. Although this custom was at first confined solely to peasantry, it was later taken up by the upper classes and became very popular.

Bourne says:

It is a ceremony never omitted among the vulgar to draw lots which they term Valentines on the evening before St. Valentine's Day. The names of a select number of one sex are, with an equal number of the other, put into some vessel and after that every one draws a name which, for the present, is called his Valentine.

Bourne, who wrote a long time ago, was among those who refused to believe in an actual person by the name of Valentine.

Three Egyptian words will tell us more about the customs of Valentine's Day than all the falsehoods concerning the saint. *Va* (Egyptian) or *Fa* means "to bear." *Ren* is "the name" and "to name." *Ten* means "to determine." Thus the day of Va-len-tine is that of determining whose name shall be borne by each person in this mode of marriage by drawing lots. Valentine's Day is a day of coupling, and the custom points to the time when chance rather than choice was the law. Marriage is still said to be a lottery. The custom of sending caricatures on Valentine's Day is probably based on asserting the freedom of choice, and making a mock of chance.

Gradually the approach of Valentine's Day came to be heralded by the exchange of pretty sentiments, written with flourishes upon scented paper and profusely decorated with hearts, arrows, doves, and various other love tokens. Most of the valentines were written in verse. In 1797 a book

of verses appeared called "The Young Man's Valentine Writer." It contained many verses suited to men and women and a collection of pretty and elaborate valentine sentiments. These were copied with painstaking care upon cards or sheets of paper and presented to "My Valentine."

Valentine's Day has very little significance to us and the holiday is rapidly falling into desuetude. But a few generations ago the very name of Valentine carried with it the breath of lavender, the scent of musk. Our great-great-grandmothers received the scraps of ornamented paper with trembling hands. They blushed as they read, and crumpled the love missives tenderly to their hearts. For the pretty verses, written carefully by hand, were not mere sentiments to them; they were actual declarations of love.

But presently the manufactured valentine came into vogue and took the place of the individual sentiments. Because it was very much less trouble, men purchased their valentine favours instead of writing them by hand. Consequently the valentine lost much of its dignity and much of its true significance. The gaudy prints and postcards were a popular fad for a while, but they were quickly discarded by people of better taste.

Entertaining on Valentine's Day.—In England, in the 15th century, it was customary for the upper classes to entertain on Valentine's Day. The custom of drawing for a valentine was at its height at about 1480, and when the gentry came together for the purpose of valentine-drawing, they usually concluded the sport with a dinner or party.

Because it lends itself so admirably to decorative schemes, and because of the wealth of tradition surrounding the very name, hostesses like to entertain on Valentine's Day even now, though the holiday is practically obsolete. We quote from the February issue of a fashionable magazine:

Mixing history and allegory, George Washington, the Father of

His Country, is honoured in the same month as Dan Cupid, who it is claimed makes the world go round.

But with all due honour to the noblest figure in our history, it must be confessed that it is the spirit of St. Valentine's Day that permeates through all the merrymaking of the month.

Entertainment on Valentine's Day is usually of a gay and frivolous nature. The "Lover's Luncheon" is a favourite; "Hearts and Showers," a special valentine shower for the bride-to-be, is becoming very popular; the valentine masquerade dance is particularly appropriate; and, of course, there is always the valentine dinner. Recently the Valentine bridge party has come into favour. The pretty conceits and favours displayed by stationers at this period make excellent bridge prizes.

A brilliant masquerade ball was held in New York recently on Valentine's Eve. The invitations were for couples only, and each couple was requested to come to the "Lovers' Pageant" as a pair of famous lovers. There were Romeo and Juliet, Jack and Jill, Tristan and Isolde, Cinderella and the Prince. The clever hostess supplied each guest, on arrival, with a lacy Valentine, upon which was written the name of his or her partner for the evening. And so, Jack went in to dinner with Juliet, and Romeo with Cinderella!

If one decides to entertain at a supper or dinner on Valentine's Day the decorations, favours, and even the food should be in the spirit of the day. Invitations are usually heart-shaped—a custom that originated with the first manufactured Valentines which were usually in the shape of hearts darted through with arrows. Decoration is a simple matter, thanks to the genius of the novelty maker.

An appropriate centrepiece for the Valentine dinner table is a satin-covered, heart-shaped box from which extend as many streamers as there are guests. Each streamer terminates in a tiny Cupid doll or a red pasteboard heart. At the proper moment the guests are advised to pull their streamers; the top of the box is jerked away and each guest pulls forth a favour.

There are many appropriate Valentine dishes for the menu. Here are some suggestions:

Oysters on heart-shaped toast
Chicken soup with heart-shaped croutons
Creamed chicken in heart ramekins
Twin soles
Jellied chicken in heart mould
Heart-shaped sandwiches
Valentine salad, with hearts of lettuce
Chocolate kisses
Ices in heart mould
Heart tarts

If you wish to serve sandwiches, you can avoid cutting them into heart shape by wrapping them in waxed paper and sealing with tiny red hearts. These can be made at home, or purchased by the dozen at stationers' shops.

For Valentine games, frolics, and entertainments we suggest two very helpful books, which contain also many suggestions for other holidays. They are: "The Book of Entertainments," by Mary Dawson, and "The Complete Hostess," by Clara E. Laughlin.

WASHINGTON'S BIRTHDAY

February 22d is dedicated to the memory of the great George Washington, one of the most noble and inspiring figures of history—unquestionably the most important and conspicuous in American history.

When Washington was born in Virginia, in 1732, there were no states, no union. There were but a few struggling colonies belonging to England. Through Washington's genius those colonies cut loose from the shackles that bound them to a land across the sea, lifted their faces proudly to the sky, and shouted their freedom to the world.

England's answer was swift and cruel—War! But Washington carried his people safely through the crisis, and a new nation marched forth from the battlefield. A child nation that might have floundered on the rocks that

wrecked many another nation had not Washington sat at the helm. His example brought strength to the tottering nation.

It is but fitting that we, who gather the harvest, set aside one day a year to do reverence to the memory of the great man who planted the seeds. Washington was the first man so honoured by the new nation. His birthday is a legal holiday, made so by state action. On February 22d the wheels of industry cease while the nation pay homage to Washington—gentleman, soldier, statesman, writer, diplomat—America's pioneer president.

On Washington's Birthday.—Celebrations on February 22d are usually of a dignified character. The Colonial Ball was a favourite a century ago; it is still a favourite to-day. Its very nature seems to partake of the spirit of Washington and his times.

It is an old custom to issue the invitations on tiny paper flags. At a Colonial Ball given in Virginia nearly a hundred years ago in honour of Washington, the invitations were hand-painted flags, the message written in the white spaces, the flag rolled and tied with a bit of red-white-and-blue ribbon. These invitations were delivered personally by small boys dressed in the costume of Washington's boyhood.

That the hostess be Martha Washington and the host George Washington at a Colonial Ball is a long-established precedent. The guests may choose any other costumes they like.

Tradition has preserved the tale of the hatchet and the cherry tree. The story appeared for the first time in a book called "The Life of George Washington," a charming history written by M. L. Weems who was rector of the Mount Vernon Parish. The cherry-tree story, as related in his quaint little book, was communicated to him by "an aged lady who as a distant relative had spent a great deal of her time in the family when a girl."

The hatchet and the cherry tree, symbols of the boy

Washington's truthfulness, are invariably used in decoration. A new interpretation is to make a miniature tree of bare twigs, neatly peeled, upon which candied cherries have been impaled. This is used as a centrepiece, and after dinner the guests gather the fruit from the tree.

Another interpretation is to have a Colonial vase with a few sprays of Japanese cherry blossoms in the centre of the table, and at each cover a tiny pot with its own individual cherry tree. The guests keep the trees as souvenirs.

At a Colonial Ball, the Virginia Reel and old-fashioned waltz are favourite dance numbers. Prizes are sometimes offered for the best exhibitions of Colonial dancing, and also for the best songs or recitations concerning the life of George Washington. A decade or so ago it was customary to supply the men with long corn-cob pipes and good old Virginia tobacco, while the ladies were presented with small cherry-blossom vases as souvenirs.

A simple dinner in honour of Washington's birthday might consist of some such menu as this:

Old-fashioned Southern Chicken Pie
Maryland Biscuits, Candied Sweet Potatoes
Cherry Pie, Southern Fruit Cake
Eggnog or Coffee

At a large dinner Virginia fried chicken is usually served, as it was a favourite dish in Washington's day.

Here is a genuine old Virginia Colonial recipe for making "A Frickasie." It is quoted from a rare old book of Colonial recipes:

Take ye fowls, cut them in pieces and clean them. Season with pepper and salt, a little mace, nutmeg, cloves, some parsley, a little bit of onion. Let them lay two hours, then flour them well, fry in sweet butter hott before you put them in. Fry a fine brown. Wash ye pan and put them in again with a pint of gravy. Let them swimyer in ye gravy. Take the yolks of three eggs with a little grated nutmeg and a little juice of lemon, and two spoonfuls of wine. Shake it over the fire until it is as thick as cream, pour over ye frickasie, and so serve it to ye table hott.

Perhaps some modern hostess would like to try this recipe—without the “two spoonfuls of wine.”

ST. PATRICK'S DAY

St. Patrick, patron saint of Ireland, was not Irish himself, as many suppose. His birth is somewhat obscure. The French claim him, the Scotch and the Welsh claim him. His true birthplace is not known.

Jones (“Historical Account of the Welsh Bards”) says:

St. Patrick, the Apostle of Ireland, is said to be the son of Calphurnius and Concha. He was born in the Vale of Rhos, in Pembroke-shire, about the year 373.

But the very same writer later refers to St. Patrick as being of Caernarvonshire. Others say that France was his birthplace.

In 432 Pope Celestine sent St. Patrick to Ireland to convert the Irish to Christianity. Until then, his name had been Maewyn, but the Pope bestowed upon him the ecclesiastical name of Patricius.

St. Patrick landed near Wicklow, according to the tradition. The people were preparing to stone him for attempting to change the religion of their ancestors. But fearlessly he preached the gospel to the pagan Irish, and they listened to his eloquence. He illustrated the doctrine of the Trinity by showing them a trefoil—a three-leaved grass like the clover. The Irish were impressed, and they were solemnly baptized by St. Patrick.

It is because of this trefoil grass tradition that the Irish wear the shamrock and the green on St. Patrick's Day, which is simply an Irish jollification day in honour of the saint. There are usually parades and pageants on this day, and plenty of fun seasoned with feasting.

The hostess who entertains on March 17th carries out the old tradition by decorating her table in green and white and giving her guests souvenirs in the form of silk sham-

rocks, chocolate harps, or long clay pipes. Mary Dawson says:

The hostess who must squeeze her occasional hospitality out of a bill of small dimensions should appreciate in full the possibilities of St. Patrick's Day—that feast of fun pure and simple.

Here to her hand is a celebration where jokes and comic ingenuity take the place of expensive elaboration, and where anyone with some little knack of tricking out a table or making a special dish out of an everyday course can give a successful luncheon or dinner.

The stationers provide clever and attractive novelties with which to decorate the home and the table on St. Patrick's Day. It is a popular plan to carry out a green-and-yellow colour scheme in the menu—green and yellow being the colours of the Irish flag.

APRIL FOOLS' DAY

In nearly all parts of the earth there exists a day which corresponds to our April Fools' Day. It is a day consecrated to the playing of practical jokes on friends and neighbours, sending them on fools' errands, tricking them into doing ludicrous things.

The origin of this day of practical joking is much disputed. This rhyme, found in "Poor Robin's Almanac" for 1760, is as true to-day as it was then:

The first of April, some do say
Is set apart for All Fools' Day;
But why the people call it so
Nor I, nor they themselves, do know.

Among the many stories advanced concerning the origin of this "fools' festival" is one which goes back to Noah and the Ark. The London *Public Advertiser* of March 13, 1769, says that the April Fools' custom arose from

the mistake of Noah sending the dove out of the ark before the water had abated, on the first day of the month among the Hebrews which answers to our first of April, and to perpetuate the memory of this deliverance it was thought proper, whoever forgot so remarkable a

circumstance, to punish by sending upon some sleeveless errand similar to that ineffectual message upon which the bird was sent by the patriarch.

We cannot accept this story as authentic, however, and we are obliged to search for other origins. It has been plausibly suggested by several writers that Europe derived its custom of April-fooling from the French. In France, the person fooled is known as the *poisson d'avril* which means "an April fish"—in other words, a young fish and therefore a fish easily caught.

France was the first nation to adopt the reformed calendar; Charles IX decreed in 1564 that the year should begin with the 1st of January. Until then, New Year's visits and the exchange of New Year's gifts had been associated with the 1st of April. After Charles's decree they became associated with the 1st of January. There were some who objected to the change—as there always are—and these became the butts of the others. Mock gifts were sent them, pretended calls of ceremony were made at their homes, they were invited to mock New Year's celebrations—all on the 1st of April.

Many writers are of the opinion that the French *poisson d'avril* is the survival of the old spring offering to Aphrodite, "under whose auspices the constellation of the Fishes was then in ascendant influence." According to these same writers Friday is the *dies Veneris*, and fish, her own symbol, is regarded consequently as an appropriate food for the day. We are still of the opinion that fish is the food for Friday!

April Fools' Day has also been traced to an old nature feast. Maurice, in his "Indian Antiquities" speaks of the first of April as the "ancient feast of the Vernal Equinox." It is very possible that the day of fooling is a relic of the festivities that were once practically universal at the Vernal Equinox which began March 25th and ended on the 1st of April. What seems most plausible to this writer is that the custom of joking and fooling originated when the new

calendar changed the first of the year from April to January. Some would still have regarded the 1st of April as the first of the year, and according to the others, who celebrated the 1st of January, these April-firsters were being "fooled." Thence would arise the custom of deliberate fooling on that day.

In Great Britain, as in France, the 1st of April was anciently observed as a general festival. But it was not until the end of the 17th century that "April fooling" became a common custom. There is no doubt whatever that the English copied the custom from the French.

The Custom of Playing Jokes.—We have seen how the custom of tricking one's friends and neighbours, or playing practical jokes on them, seems to have originated. In some countries the April Fool idea became so strong that very few dared to start an enterprise on the 1st of April, and only the brave were married on that day. Napoleon evidently scoffed at the idea, for on the 1st of April, 1810, he married Maria Louisa. And promptly his Parisian friends called him "*un poisson d'avril*."

There is a popular French story concerning the 1st of April. It appears that a woman stole a gold watch from the home of an acquaintance and set the police a lively search all over the town. Finally they located it hidden in her home, and laughingly she cried, "*Poisson d'avril!*" Nevertheless, she was taken before the magistrate who, having just as great a sense of humour as she, informed her that she would have plenty of time to laugh over her good April Fools' joke, as she was going to jail until the ensuing April 1st. She had really attempted to steal the watch but had tried to pass it off as an April Fools' joke.

Another story, which has not been authenticated, concerns Francis, Duke of Lorraine, and his wife. They escaped from captivity at Nantes one April 1st, dressed as peasants. They started off boldly, but someone detected the disguise and ran ahead to warn the sentries. As it was the 1st of April, the sentries merely laughed and cried at

their informant, "*Poisson d'avril!*" and the pretended peasants escaped.

The custom of sending people on "sleeveless errands" appears to have been popular in England in the 18th century. We find many such "errands" recorded in "*Poor Robin's Almanac*" as early as 1728. Friends or neighbours were sent to the village store to purchase the "*History of Eve's Grandmother*"; to the grocer's to purchase a pint of pigeon's milk; to the cobbler for some strap oil. And it appears that there was always someone simple enough to go on the errand, to the delight of the crowd that followed discreetly behind.

In 1860 practical joking was carried to extremes in England. In March of this year many people of prominence received an invitation, in all appearances portending to be official, to witness the "Annual Ceremony of Washing the White Lions, on Sunday, April 1st, 1860. Admitted only at the White Gate." All that Sunday morning hundreds of cabs rattled about Tower Hill in vain search of the White Gate. The perpetrator of this April Fools' joke was, fortunately for himself, never discovered.

The custom of April-fooling has remained, and in the United States it is quite customary to play practical jokes on one's friends on this day. Children particularly are fond of the day and make of it a fun festival.

The April Fool Party.—It has long been the custom to open spring entertainment with an April Fool party. The English are fond of entertaining on this day, and the French usually celebrate the "festival of fun" by giving a dinner or party. With us, April 1st is a fairly popular time for entertaining informally, usually at jolly home parties.

An old custom is to pen the invitation on foolscap folded into the shape of a fool's cap. Invitations are usually bits of verse, a custom very popular fifty years ago. This is the type of verse used generally to invite friends to an April Fool party:

If for fun you've any thirst,
Come to my party on April 1st;
There'll be tea and fun galore—
So put on your best, and come at four!

Daffodils and daisies are popular for decorative purposes on April 1st. But it is an old custom to decorate the home in an absurd and foolish manner for this occasion. The English appear to have originated this custom. The home is decorated as it would be for Christmas, New Year's, or any other holidays but the one being celebrated. Imitation holly and mistletoe are used, and guests are greeted with "Merry Christmas" or "Happy New Year" upon arrival. This corresponds to the "Topsy Turvey" parties which are so popular here and which are found described in almost all books on social entertaining.

The "Fish Dinner" is always good fun on April 1st. Invitations are issued on small coloured pasteboard fish, of the kind that can be purchased at novelty or stationery shops. The table is decorated in green and white. In the centre is a bowl of goldfish from which rises a sheaf of miniature fishing rods. At the end of each rod is a narrow green ribbon line which extends across the table—one to each plate. At the end of the line is a souvenir for the guest, usually a tiny celluloid fish or a small fishing basket filled with candy. The dinner, of course, includes fish in several varieties.

Concerning the April Fool party, "The Book of Entertainments" says:

Begin the fun by passing among the company some delicious-looking bonbons and fruit. Most persons will decline, believing the goodies to be of the too-familiar April Fool class. In this they will be mistaken, as the dainties are genuine. No one who has previously declined is allowed to alter his decision when the goodies prove edible.

The custom of April Fool candy, which originated in France, gave rise to the custom of "camouflaging" food that is served at the April Fool party. Clara E. Laughlin gives a typical April Fool menu, made up entirely of "April Fools":

First, large green peppers, on lettuce leaves, looks like a salad, but when the top is lifted off an oyster cocktail is inside. Then baked potatoes, large and piled on a platter, are passed, and prove to be full of minced sweetbread and fresh mushrooms. Turnovers and deviled crabs turn out to be pieces of broiled or roasted chicken wrapped in pie crust. Tomato salad is found to be raspberry ice, moulded in tomato form, on leaves of paper lettuce. In each "tomato" lies a heaped spoonful of what appears to be mayonnaise, but is a soft custard. Pillboxes full of tiny candies, covered with cake batter, baked and iced like little pink and white cakes, are the last deception.

Miss Laughlin's book and that of Mary Dawson (see p. 410) both contain excellent suggestions for the April Fool party.

EASTER

Through religious, in a sense, and solemn in character rather than jolly and frivolous, Easter is a holiday that appeals to everyone. Somehow the whole world becomes more beautiful at Easter-time. Millions of buried seeds burst suddenly into bloom. Winter shivers—and is gone. And the earth makes its beautiful Easter offering of spring flowers.

Two theories are advanced concerning the origin of Easter. Wheatley says that Easter is in memory of the crucifixion and that the holiday is so called from the Saxon *oster*, "to rise." Easter, then, is in honour of Christ's resurrection. But he mentions also, as do various other authorities, that Easter may have been the name of an old Saxon goddess worshipped at the period which now corresponds with our Easter, usually in April.

One writer says:

The name *Easter* comes from an ancient Anglo-Saxon goddess of spring, *Eastre*, in whose honour a festival of spring is held in the month of April.

There appear to be many marked similarities between New Year and Easter festivities. Among the Persians, the New Year is looked upon as being the period of renewal

in all things—the triumph of the sun, of nature, of man. They present one another with eggs, as typifying the beginning of a new life (see p. 396). This “Feast of Eggs,” as it was called, was preserved in the Easter festivities of the Christians when they changed the New Year to January 1st. It is to be noted that the Jews, whose Passover is older than the Christian Easter, also use eggs in their feasting at this period.

Beginning of the Easter Festival.—As a time of feasting and celebration, Easter goes back into great antiquity. No one seems to know precisely when it began, although many are inclined to believe that it is a relic of the ancient celebration of the Vernal Equinox—the time of the original New Year.

The earliest Easter hymn of which we have record takes us back to the 4th century. It is a simple thing by St. Ambrose, and it was probably written about the year 340. About 500 years later Alfred the Great, King of England, decreed by law that the week following Easter be kept holy—a time of spiritual rejoicing. The people obeyed the decree, but rejoicing of any nature, spiritual or otherwise, ultimately assumes but one form—mass festivity.

A popular superstition in ancient England was that the sun danced on Easter Day. It became a common custom for the people to rise early to witness this dance of the sun. Wheatley says that there existed, at one time, an ingenious method of making an artificial sun-dance. A huge vessel of water was set out in the open and the rays of the sun permitted to play upon its trembling surface. The result, of course, was a dancing of the sun's reflection, which greatly impressed and delighted the masses.

The dancing of the sun, the blooming of the flowers, the beautiful awakening of the earth after the winter's slumber, seem to symbolize to the people the awakening of Christ and His Resurrection. Mr. Brand says that the people in the middle districts of Ireland still rise at about

Dancing girls, by Korb. American, 20th Century.

four o'clock on Easter morning to see the sun dance "in honour of Christ's rise from the darkness of the grave."

An ancient English custom was to put out all the fires and relight them on Easter Eve—typifying the beginning of a new life. We have seen how other peoples observed this very custom at the period of the New Year (pp. 393-394). In England it was customary to preserve consecrated flints in the churches for this special purpose. A popular superstition was that holy fire, obtained on Easter Eve with the consecrated flints, would afford protection from storms, draughts, famines, etc.

Concerning Easter Eggs.—Many peoples of antiquity regarded the egg as an emblem of life, of a beginning. The Egyptians, the Persians, the Greeks, Gauls, Romans, and others believed the secret of life to be within the egg, and they regarded it therefore as a token or symbol of creation. Easter was the time of the solar new year—as one writer calls it, the "incubation of nature." It was a time when all things were renewed, and the egg was regarded as a fitting emblem of the period.

The Christians borrowed the egg and made it part of their Easter festivities, but they made it emblematic of the Resurrection. To them the egg was regarded somewhat in the light of a prison or tomb, from which future life escaped. Thus, a writer in the *Gentleman's Magazine* for July, 1783, remarks that the egg at Easter is "an emblem of the rising up out of the grave, in the same manner as the chick, entombed, as it were in the egg, in due time is brought to life."

The custom of colouring eggs appears to be exceedingly ancient. The Jews boiled their eggs hard and decorated the shells. Le Brun says that the Persians always colour their eggs and have had the custom since ancient times. Father Carmeli, in his "History of Customs," tells us that coloured Easter eggs are to be found in Italy, Spain, and Provence, and that public sports with eggs are held during the Easter period.

It would seem that the original purpose in colouring eggs was to imitate the new colours of the earth, induced by the coming of spring and the blossoming of the flowers. But when the original custom was taken over by the Christian Church the eggs were decorated principally in red, to denote the blood of Christ.

In ancient England it was a popular custom to roll down Greenwich Hill at Easter—possibly to simulate ecstasy at the Resurrection, but more likely because of the natural ecstasy that the return of spring would incite. Later this custom was abandoned and eggs were rolled down the hill instead. This custom has survived, but now it is observed by children.

An old custom was to boil the eggs hard, paint them, and write mottoes on the shells. Boys and girls of the poorer classes sang in the streets and were given the coloured eggs. Then they gathered at the hill and rolled the eggs down to the base. One by one the eggs broke, and the child whose egg held out the longest won the "Egg Roll." He, or she, was entitled to all the eggs. The custom of rolling eggs down the green is observed at the White House in Washington at Easter-time—a quaint old custom in a modern setting.

The rabbit's part in Easter festivities originated with an old superstition that rabbits lay eggs on Easter Eve. This superstition is possibly Teutonic in origin, but no one knows precisely when it started or what was the original meaning or purpose behind it.

The Negroes of the South, through some quirk of fancy, believe that the "left hind foot of a graveyard rabbit killed in the dark of the moon" is a powerful talisman and will protect them from all evil. It is barely possible that this superstition grew out of the old Easter idea that rabbits are given supernatural powers on Easter Eve which enable them to lay eggs.

Dressing Up on Easter Day.—The Chinese, the Japanese, the North American Indians and many other peoples

cast off all their old apparel at the period of the New Year and don everything new and fresh. The house is cleaned out, new fires are built—everything must be new and clean for the beginning of the New Year.

One sees a semblance to this idea in the custom of “dressing up” at Easter-time. Each little girl must have her new frock and shoes, each little boy his nice new suit. Men and women like to wear their “best.” Just as the world dresses itself in its new spring flowers, mankind dresses itself in new, bright apparel. Psychologically, the custom originated solely in the desire to “spruce up” at the period in which all nature blooms with new life, at the period when Christ, it is said, rose from the earth and was resurrected. As a writer in the 18th century would have us believe, the flowers which we wear at Easter-time are simply emblems of the Resurrection.

But fundamentally, this custom of discarding old, worn clothes and appearing in attractive new apparel at Easter is part of our primitive instinct to place the old year behind and step forth, fresh and clean, into a new year (see p. 394).

Originally the ceremonies attending the observance of Easter were very simple. But a great change was brought about by Constantine in the early part of the 4th century. Constantine was fond of display, of gaudy ostentation. He caused Easter to be celebrated with pomp and extraordinary richness. He filled Easter Sunday with elaborate ceremonials.

It was during the time of Constantine that night watches lasting until midnight were instituted in churches. Finding the slender tapers which had been used until this time not sufficient to suit his pompous nature, he had huge pillars of wax made to be used instead. He found, in the Easter festivities, an excellent excuse to appear richly apparelled, wearing something so new and unusual that everyone else would seem poorly clad beside him.

But everyone else began to “dress up,” too, and so was

established the custom of wearing new and bright apparel on Easter Sunday. The Easter bonnet originated in the popular superstition that to wear a new bonnet for the first time on Easter Sunday was to be assured happiness in love during the year.

Entertaining at Easter-time.—Dr. Drake, writing of Shakespeare and his times, tells us that Easter was a season of great social festivity. The English appear to be particularly fond of entertaining at the Easter period, and there are many dinners, parties, and other festivities. The custom of the Easter breakfast at high noon, Easter Sunday, originated in England and is now quite popular in the United States.

But by far the most popular form of Easter entertaining is a luncheon on Easter Sunday. It is usually quite elaborate and the invitations are engraved. Green, yellow, and white should be the colour scheme, pale yellow marigolds tied with green ribbon making excellent souvenir bouquets for the guests. The menu is the usual luncheon menu, with eggs used in salad and in garnishing to carry out the Easter idea.

A pretty feature for an Easter-time dance provided coloured Easter bonnets for each lady of the company. The bonnets were home-made millinery in crepe paper of different colours on the order of the universally becoming "poke." The bonnets were displayed on an old-time millinery "tree" and each lady selected one. The men in an adjoining room selected each a pair of strings. The man whose strings proved to match in colour a bonnet presented them to the wearer of it and claimed her as his partner for the cotillion.

The above refers to the popular type of dance given at Easter-time about fifteen years ago. To-day the costume dance is popular. The hostess issues the conventional dance invitation, adding only the word "Costume" in the lower left-hand corner. For this occasion appropriate costumes would be: a Humpty-dumpty costume, a rabbit costume, a chicken costume, an Easter-lily costume, a butterfly costume, etc.

MAY DAY

The May-day festival is one of the oldest of which we have record. Although we have only the children's May parties in the parks to remind us of this festival in the United States, May Day was at one time a prominent and popular holiday, observed with great festivity.

Most authorities maintain that the May-day festival originated with the ancient Druids. In their worship of the god Bel, the Druids made immense fires upon the cairns on May 1st and celebrated the occasion with song and dance. But the Romans also welcomed the 1st of May with joyful celebration, and the true origin of the May-day festival is still somewhat in doubt. Maurice contends that it can be traced back very much farther than we suspect, that "the May-day festival is identical with the Phallic festivals of India and Egypt, which in those countries took place upon the sun entering Taurus to celebrate Nature's renewed fertility."

Whatever its origin may be, May Day is unquestionably a form of nature worship. We are inclined to believe that it grew out of the natural joy and ecstasy of the masses welcoming spring and its bounties after a long winter. The very nature of the festival suggests this origin. The dance around the Maypole, which was originally a mass of green branches decorated with May flowers; the joyous feasting; the choosing of a King and Queen of the May—all suggest a people in ecstasy at the passing of winter and the promise of spring. The fact that May Day has always been the favourite festival of European peasantry, who would be the people to suffer most the hardships of winter, seems to bear out our contention.

In England the May feast was one of the greatest and most important events of the year. It was a time of great revelry and rejoicing. Green, being regarded as the symbol of re-birth, was used for decoration. There were sports, games, gay peasant dances. A King and Queen of the

May were selected and elaborately decorated for the occasion.

Before long the English May Day became a popular institution, like our Thanksgiving, and even royalty observed it. It became customary in the 15th century for the royal family to have May-day dinner served in the woods. For a long time it was the custom to wish one's friends "A Merry May!" as it is now the custom to wish one's friends "A Merry Christmas."

The Maypole.—The ancients believed that May 1st was the boundary day between summer and winter and that on this day a war took place between the two seasons to determine which would prevail. It became customary to stage a mock war between two people, one to represent winter, the other, summer. Summer always managed to win and was promptly crowned King of the May. In triumph he held aloft green branches decorated with beautiful May flowers and sang an old folk song, the thought of which seems to have been, "I have won, I bring you summer!"

The branches and flowers later were interpreted as the Maypole. At first a young tree was cut down and decorated with ribbons and flowers. This was set up triumphantly in the village and everyone danced around it. The Druids, incidentally, worshipped the tree, and it is very possible that the Maypole originated with them. But long before the time of Charles I in England the tree had given way to the pole. Huge poles were planted in the ground and decorated gaily with green and flowers. Long streamers were attached to the top, and each dancer held on proudly to his or her end of the ribbon.

May Day in America.—In America the May Day was never popular. A Puritan preacher is quoted as saying, "If Moses was angry when he saw the people dance around a golden calf, well may we be angry to see people dancing about a post."

Governor William Bradford wrote, under date of 1628:

They allso set up a May-pole, drinking and dancing about it many

days together, inviting the Indian women for their consorts, dancing and frisking together. . . . Shortly after came over that worthy gentleman, Mr. John Indecott, who brought over a patent under the broad seal, for the governmente of Massachusetts, who visiting those parts caused that May-pole to be cutte downe, and rebuked them for their profannes, and admonished them to look there should be better walking.

It seems that an old English custom was to seize a girl's gloves on May Day and demand a kiss in forfeit. This custom was brought across the ocean by the colonists and preserved in their lore. We are told that on May Day, 1660, Jacob Murline seized Sarah Tuttle's gloves and demanded the forfeit. Despite the law prohibiting love-making of any kind without the consent of the parents, they sat down together and kissed for a half-hour—much to the amusement of a group of onlookers who had gathered about them.

Sarah's father had Jacob dragged to court "on the charge of inveigling his daughter's affections." But the young lady calmly informed the court that the inveigling had been all on her part and that she had wanted to be kissed! She was fined and warned to mend her ways.

There is very little to remind us of May Day in this country, except, as has already been mentioned, the children's May parties in the parks. These May parties are held throughout the month of May, usually under the auspices of the neighbourhood school. The children decorate a Maypole with gay-coloured papers and ribbons, dress themselves in bright paper costumes, and march in proud parade to the park or the field. Here they dance around the Maypole, play games, compete for prizes, and feast on ice cream, cake, and candy. The only adults who attend May parties to-day are the teachers or the parents of the children.

A curious May-day superstition is that to bathe one's face in dew just before sunrise on May morning is to have a complexion of exquisite beauty. In England every girl at one time believed this tradition, and we are told that

even Queen Catherine and her ladies-in-waiting "went out before sunrise to seek the Maydew bath."

An Irish superstition is that if you will go forth at sunrise on May Day and gaze down into a well, you will see the reflection of your lover; and if you make a wish at this well, the wish will come true. Scotland borrowed the superstition from Ireland and built miniature "wishing wells" to feature in their May Day festivities. These "wishing wells" are still to be found in rural sections.

MOTHER'S DAY

The second Sunday in May is set aside for honouring the nation's mothers. It is a day consecrated by suggestion of the late ex-President Wilson to the memory of mothers who are dead, to the thought of mothers who are alive.

It has become a general custom to send flowers to one's mother on this day, no matter where one may happen to be, and to wear a white carnation in her honour. Usually roses are sent, although other flowers are appropriate. Custom is making it a practice to send with the flowers a box of candy, an interesting book, a thoughtful remembrance.

While the holiday is not legal, it is observed almost universally in this country, and there has been some talk recently about establishing Mother's Day as a national legal holiday. There has also been some mention of a Father's Day, and it is very likely that both of these days will be set apart by the United States as official honour days for parents.

MEMORIAL DAY

During the Civil War a number of Southern women began the loving custom of decorating the soldiers' graves with flowers. They decorated not only the graves of their own soldiers, but also of the Northerners who had died in the South. For this noble work they were honoured by North and South alike.

Three years after the war, General A. Logan, then Commander-in-Chief of the Grand Army of the Republic, showed his admiration for what the Southern women were doing by issuing an order that the 30th day of May of that year (1868) be set apart for the purpose of strewing flowers on the graves of the soldiers. Various states in the Union took the cue, and soon Memorial Day, or as it is sometimes called, Decoration Day, was established and made legal by state action.

In the Northern states, Memorial Day is observed May 30th. In Southern states, however, the day is observed by some on April 26th, by some on June 10th. People visit the cemeteries with flowers and decorate the graves, usually the graves of their own loved ones. But wherever Civil War soldiers are buried, beautiful floral decorations from strangers are not uncommon.

Any entertainment on Memorial Day is of a solemn and dignified nature. Simple outdoor picnics are appropriate; the afternoon tea and the simple luncheon are acceptable. But anything of a gay frivolous nature is not in keeping with the spirit of the day.

ARBOUR DAY

One day a year is set aside for the purpose of tree-planting. The date varies in different localities, for spring comes to some parts much later than it does to others. Arbour Day is usually fixed by the governor.

The custom of tree-planting on a special day set apart for the purpose originated in 1872. A man by the name of Smith, governor of Nebraska, realized that for the future good of the country more trees would have to be planted. It occurred to him that if every child in school planted but one tree each year, there would always be plenty of trees.

Accordingly he set aside a certain day in April and called it Arbour Day. On this day the teachers took the children to the woods and taught them how to plant trees. Soon after Kansas copied the same idea, and set aside a

day for the planting of trees. Other states quickly followed, and even Canada caught the idea.

To-day Arbour Day is made legal by state action, and each school has its own particular little rules, plans, and regulations as to what shall actually be done on that day. In most cases, however, the children are simply taken into the woods in holiday fashion and each child is required to take part in the tree-planting ceremonies. In some states the authorities supply whatever materials are needed; in others the children are required to do so.

Before leaving the subject of tree-planting and Arbour Day, it would be interesting to glance at some of the famous trees in this country. There is, for instance, the "Charter Oak" which, until 1855, stood on the northern slope of Wylly's Hill in Hartford, Conn. In that year it was blown down during a storm, and now a white marble slab marks the spot. The tree derived its name from the fact that in 1687 a charter from the King of England was hidden in it. The charter gave the people of Connecticut certain rights, and they wished to preserve it from Governor Andros, who would have destroyed it and ruled as he liked.

"Washington Elm" is the famous old tree under which George Washington took command of the Continental army in 1775. It is no longer standing.

"Burgoyne Elm" a favourite old historic tree is still alive and still standing. Burgoyne was an English officer who came to this country during the Revolution with an army of eight hundred men. He was forced to surrender his army on October 17, 1777, and he himself was taken to New York as prisoner of war. The citizens of New York planted a tree in honour of the victory, and named it for their prisoner.

The "Treaty Elm" is the tree under which William Penn made his famous treaty of good faith and friendship with the Indians. It stood, in Philadelphia, for several generations; when it was blown down in 1810 it was said to be at least two hundred and forty years old.

FLAG DAY

When the American Colonies decided to become a separate people, they decided also to have a flag of their own. The Continental Congress, which met in Philadelphia, appointed Franklin, Harrison, and Lynch a committee to arrange a flag. This was in 1775.

The committee decided upon a flag with thirteen stripes of red and white, with the "Union" in the corner. But the "Union" appeared also on the English flag, and on June 14, 1777, this resolution was adopted in Congress:

Resolved, That the flag of the United States be thirteen stripes, alternate red and white, that the "Union" be thirteen stars, white, in a blue field, representing a new constellation.

Thus was originated the flag of the United States of America. A new star was added each time another state joined the union. The thirteen stripes, however, representing the thirteen original colonies, still remain.

Flag Day is a special day set aside by state action to honour the flag. June 14th is the day selected, because that was the day on which Congress adopted the resolution concerning the flag. The holiday is not legal in all states, but it is customary throughout the nation to display the flag on June 14th.

Any celebrations on this day are of a patriotic nature, with the flag very much in evidence.

INDEPENDENCE DAY

Independence Day, familiarly known as the Fourth of July, is in commemoration of the signing of the Declaration of Independence. It was on July 4th, 1776, that the old, cracked Liberty Bell rang for the first time for the independence of the new nation. This bell, made in Philadelphia, has hung in the building known as the "State House" since 1753.

State action has made of Independence Day a legal holi-

day, observed throughout the nation. On this day flags are hung from all the windows, industry temporarily ceases—and the nation celebrates all over again the triumph over oppression and the great note of freedom.

The custom of building huge bonfires, shooting off firecrackers, and making a great din, originated with the very first Fourth of July. In wild excitement at their victory, drunk with their new freedom, the people collected in the streets and celebrated as all mobs celebrate—with noise and fires and joyous shouting.

Since then it has been customary, on every recurring Independence Day, to commemorate the great occasion by shooting off firecrackers and making a great din, in the manner of those who first celebrated the triumph. Because of many accidents and disastrous fires, it has recently become customary for certain cities to forbid the sale of firecrackers on Independence Day, but as a general rule there is wild celebration throughout the country on that day.

A Fourth of July party may be as gay and jolly as one pleases. But the occasion should carry a note of patriotism. Of all the year's entertainments, the Independence Day celebration is undoubtedly the one most ideally spent in the country. Away from the noise and the heat and the madness of the city, one can reflect upon the hallowed memories of the day, and withal have a jolly good time.

The dinner table on Independence Day should carry a patriotic touch. The centrepiece might be blue and white flowers, in a red bowl. At each place there might be a Liberty Bell of hard chocolate, or perhaps of red-white-and-blue paper. Or the souvenir might take the form of a cracker, in the patriotic colours, containing a hat of tissue paper.

The menu sometimes carries out the patriotic colour scheme. The cakes are frosted with red-and-white striped icing and decorated with tiny silk flags. Bonbons are wrapped in red-white-and-blue tissue paper, as are also the

sandwiches at a luncheon or tea. Vanilla and raspberry ice, sprinkled with tiny blue candies, makes an appropriate dessert.

A costume ball on Independence Day would require costumes of the Colonial period. Usually at evening entertainments on this day the electric bulbs are of red, blue, and plain glass, or the ordinary bulbs are covered with red and blue paper to carry out the patriotic note.

LABOUR DAY

The first Monday in September honours the dignity of labour. In a land of commercialism and great industry, sentiment sets apart one special day in which to honour labour.

This holiday, known as Labour Day, is made legal by state action. It is particularly popular in the industrial states, but not in agricultural territories, where its observance is likely to interfere with the harvesting.

There are no particular ceremonies or celebrations in connection with Labour Day. It is usually observed as a day of rest.

COLUMBUS DAY

Some states make the 12th of October a legal holiday in celebration of the discovery of America. It is called Columbus Day in honour of the discoverer, Columbus.

A tea party is regarded as the most appropriate type of entertaining on Columbus Day. Columbus suppers and Columbian dances are popular also. The home should be decorated with flags for the occasion, and any entertainment—such as music or recitation—should carry a patriotic tone.

It is interesting to entertain for children on Columbus Day. It has for generations been customary to observe the day at school with pageants and pantomimes, which can be introduced very easily into the home. The children can come to the party dressed as Indians, as sailors of the 15th

century, as pirates, etc. There can be contests, prizes being offered for the best recitations or essays on Columbus and the discovery of America. The day lends itself more to the entertaining of children than of grown-ups.

HALLOWE'EN

There is probably no folk holiday which has taken a stronger hold upon the popular imagination than that celebrated on the eve of October 31st, the holiday known as Hallowe'en. The name means hallowed, or holy, evening.

Hallowe'en is really an Autumn festival, as May Day is a spring festival. But peasant superstition robbed the holiday of its original meaning and surrounded it with the delightful mystery of ghosts, witches, spirits, and hobgoblins. And because of these superstitious notions, Hallowe'en appeals to the public fancy and all its old customs and traditions have remained.

The ancient Druids had a great autumn festival which commenced at midnight, October 31st, and lasted throughout the following day, November 1st. Among other things, they believed that on this night the great lord of death, Saman, called together all the wicked souls that had been condemned, within the past twelve months, to inhabit the bodies of animals. Because of the wicked spirits that prowled about on this night, they lit huge bonfires and kept a sharp lookout. Thus it is unquestionably from the Druids that we derive the belief that witches and ghosts walk abroad on Hallowe'en—a belief still prevalent among rural peoples in Europe.

The Romans also had a festival about the 1st of November which was in honour of Pomona. Nuts and apples, as tokens of the winter store of fruits, were roasted before great bonfires. It appears that the Druidic ceremonies and the Roman ceremonies were grafted one upon the other, to become our Hallowe'en.

Originally the festival of Hallowe'en was simple and was

confined almost wholly to the church. But lower classes somehow took a peculiar interest in the festival, and weird tales of spirits and goblins were circulated among them. The tales took root. They spread. It became a general and widespread notion that ghosts and spirits walked abroad on Hallowe'en. Peasantry gathered together on the eve of October 31st, built great bonfires to keep the spooks away, and shudderingly told one another of queer noises, strange flutterings, trembling shadows.

And they tempered their fears with feasting. They brought out their winter stores of nuts and apples. In their hands the festival of Hallowe'en, meant to be simply a festival in honour of autumn, became perverted. Instead of being an evening hallowed to autumn and the winter stores, it became an evening hallowed to witches, to ghosts, to the supernatural. And young girls, suiting the holiday to their own hopes, decided that this was the one night of the year in which they were permitted to peer into the future and discover the names of their future husbands!

The roasting of nuts on Hallowe'en was very popular in mediæval England. Indeed, the roasting of nuts became so closely associated with this festival that it became known, in some localities, as "Nutcrack Night." The custom of "ducking" for apples is probably English in origin; it was widely prevalent among the English during the early period of mediævalism.

Customs and Superstitions of Hallowe'en.—It is customary for young people, throughout England, to dive or "duck" for apples. There are many superstitions connected with this custom. For instance, the maiden who is fortunate enough to win the apple is advised to sleep with it under her pillow, for she will surely dream of her lover. Another superstition is that if the young lady eats the apple while standing before her mirror, combing her hair, her future husband will look over her shoulder into the glass. She must under no circumstances turn around, or he will vanish.

One glimpses the almost childlike ingenuity of a superstition such as this. The apple is supposed to be eaten at midnight. The young lady, evidently very superstitious or she wouldn't be attempting the thing at all, peers into the mirror and actually imagines that she sees someone in the glass. She dares not turn around lest the vision disappear. She thinks of the person she would like to be her lover, stares wide-eyed and frightened into the mirror—and *sees him!* It is simply imagination tinged with fear and superstition, yet the next morning the young lady is quite positive that what happened at midnight was real, true. No one can convince her otherwise.

Most people avoid the churchyard and cemetery on Hallowe'en. The common notion is that the spirits of the dead walk abroad on that night. There is a superstition that if a man meet one of these spirits face to face, he will fall dead. Therefore, under no circumstances should one turn or look behind if one hears footsteps on Hallowe'en!

Young girls in England were for many generations in the habit of gathering milfoil on Hallowe'en and sleeping with it under their pillows. Like the apple, it caused them to dream of their future husbands.

Another old custom was to throw a skein or ball of yarn from the window, holding the end of the yarn in the hand. It was believed that an apparition of one's future husband would take the other end, rewind the ball, and leave it just beneath the window. Clever fellows, courting young ladies who would have none of them, watched for the ball of yarn to come hurtling through the window, and played at being "apparition." They knew that eager eyes watched behind the curtains!

The black cat, being the traditional companion of witches, is ever present at Hallowe'en. The pumpkin is simply a symbol of the harvest. Stealing gates, buggies, chairs, etc., a popular Hallowe'en prank until recently, was a relic of the time when gates and gate-posts disappeared and were said to have been stolen by the evil spirits. cording to tradition, everything connected with Hallowe'en smacks of the supernatural.

The white hare is more feared on Hallowe'en than any ghost. The superstition is that when a maiden, having loved not wisely but too well, dies of a broken heart, her spirit comes back in the shape of a white hare to haunt her deceiver. The phantom follows him everywhere, and is invisible to all but him. Ultimately it causes his death—on some dark Hallowe'en. We see the white hare as a symbol of conscience. It is usually conscience that gives rise to fear, and fear, to superstition.

Chalking on Hallowe'en.—An old Hallowe'en custom, practised by street ruffians, is to chalk the backs of passers-by, shout "Hallowe'en!" and scamper off. This appears to be a very old custom practised in parts of England, and particularly at Diss, Norfolk.

For generations it has been customary, in this locality, for the children to keep "Chalk-back Day" on the Thursday before the fair day, which was held on the third Friday in September. It is at this period that the sun (the whitener) is supposed to enter "the hinder part of the circle and the children chalk the people's backs to indicate that the rule of the White God has ended."

Somehow the custom became connected with Hallowe'en, and even now the children of our own country find keen joy in chalking one another's clothes at this period.

Hallowe'en Festivities.—Tradition calls for feasting on Hallowe'en. The quaint old festival with its queer superstitions and fancies is becoming more and more an occasion for social entertaining. What, for instance, could be better fun than a Ghost Party?

From beginning to end the party must carry an element of mystery. The invitations, reading somewhat like the following, should be penned on cards in the form of witches, ghosts, or black cats:

FELLOW-SPOOK!

You are hereby notified to attend a Ghost Convention on the 31st

of October, otherwise known as Hallowe'en. Come at eight o'clock and park your troubles at the door. The password is "Fun." Full ghostly regalia of sheet and pillow case will be given each ghost on arrival. Be sure to come and see what happens at the stroke of twelve.

(Name of Hostess)

High Ghost.

(Address)

The home, of course, must be decorated for the occasion. Candlelight should be used, and only a few candles at that, so that everything is dim. Or if you are afraid of fire omit the candles and shroud all the lights in lavender paper. Drape the furniture, the dress form, the broom with sheets—for ghosts must have a ghostly atmosphere.

Strangely enough, ghosts eat, and no Hallowe'en party is a success without a properly planned menu. A long, narrow table is the best, for when there are spirits and witches in the air, the nearer to one another the guests are the better they will like it! At each place have a small black pasteboard cat filled with candy.

Hot bouillon should be served, as it helps dispel the shivery feeling of Hallowe'en. Pumpkin pie is, of course, a tradition. And there should by all means be deviled eggs, devil's cake, and sand-*witches*.

Barn parties are particularly appropriate at Hallowe'en. The barn offers many opportunities for clever decoration. Pumpkins lighted with candles can be wired around the barn; bats made of brown cheesecloth and whalebone can be suspended by threads from the ceiling; ghosts and skeletons, made of brownsticks and sheets, can be hidden behind bales of hay. The very environment lends itself to Hallowe'en fun.

In the 18th century a very popular Hallowe'en frolic called "Fire o' Love" was practised outdoors. The frolic is very appropriate for the barn party if one wishes to carry out the old custom.

A large tub of water is brought into the barn. Each girl writes her name on a separate piece of paper, twists it to keep it closed, and throws it upon the water. A candle

end, attached to a flat cork, is placed on the water and floats this way and that among the slips. One by one it burns them up. In a few minutes the candle end sputters and dies, and there are always one or two slips left. These are taken out and opened. The unhappy young ladies whose names appear upon them will never marry, according to the old tradition. This method of divination was extremely popular about 1730 and was practised, and implicitly believed, by men and women alike.

Another time-honoured Hallowe'en custom is to bob or duck for apples. This, too, is appropriate at the barn party. The lucky person to win the apple pares it round and round in one piece and throws it over his or her head. It falls in some grotesque form, which the guests interpret as the letter it most closely resembles. This is regarded as the initial letter of the player's future mate.

The apple-paring method of divination appears to be American rather than English in origin. It was a favourite among Colonial maidens, who quoted this bit of old verse while casting the paring over the shoulder:

By this paring let me discover
The initial letter of my true lover.

The hostess who entertains at Hallowe'en should preserve all the old traditions and customs, no matter how silly and frivolous they may seem, for they add a certain quaintness which no one can fail to enjoy.

ARMISTICE DAY

On the eleventh day of the eleventh month at precisely eleven o'clock, 1918, America went mad. Armistice! The *New York Evening Sun*, dated Monday, November 11, 1918, carries this feature article:

HOLIDAY PROCLAIMED AS CITY WILDLY CELEBRATES ARMISTICE

Greater New York's millions, men, women, and children, went

wild with joy to-day over the news that Germany has been whipped to a frazzle, that the Kaiser has been chased out of Germany, and that the war is over. The delirious exultation that the city went through—and is still going through—would have been beyond all belief, if it had not actually been seen.

Early in the day the Mayor had proclaimed a public holiday, which was just a simple formality, for no one had the least intention of working anyway. Shops, factories, offices—all were deserted. The article continues:

Men and women, strangers, kissed each other in the streets. At twelve o'clock a huge parade of leaping, shouting, flag-waving men, women, and children surged northward from City Hall to encounter other riotous processions coming down Fifth Avenue, mingling one with another.

What was happening in New York was happening all over the country. Everyone went wild with rejoicing. The World War was over! Armistice!

And since that never-to-be-forgotten day in 1918 Armistice Day has been observed with celebration, and in some states with public ceremony. Though the day has not as yet been set aside legally as a holiday, everyone remembers Armistice Day and pauses, if but for a moment, to think kindly of the soldiers who lie buried "in Flanders fields," where "the poppies grow."

Poppies are worn on Armistice Day in memory of the soldiers and sailors who gave their lives in the World War. If a dinner, party, or celebration is given in honour of the signing of armistice, poppies should be the predominating note. Of course, any celebration on this day must carry with it a patriotic significance.

THANKSGIVING

Of all the holidays observed in this country, there is none so distinctively American as Thanksgiving. It is a legacy of the Puritans, cherished because of the romance and traditions that surrounded it.

Although Thanksgiving as we know it is an American institution, days of thanksgiving in recognition of special mercies or favours have been known since the earliest times, and have been common to almost all nations. We can only guess, but we can never know, what primitive people of a forgotten age first gave thanks in their crude way for rain after drought, for food after famine.

The Israelites appear to have been among the earliest people to observe a special day of thanksgiving. They observed faithfully, with great rejoicing and solemn ceremonies, their Feast of Tabernacles, a day of thanks not only for the bounties of the land, but for the escape from Egypt.

The feast of tabernacles shalt thou hold for thyself seven days, when thou hast gathered in the produce of thy threshing-floor and of thy wine press. (Deuteronomy XVI, 13.)

The ancient Greeks had also a day of thanksgiving known as the Feast of Demeter. This nine-day feast was in honour of Demeter, goddess of the cornfield and harvests, and was meant, very obviously, as a day of gratitude for the richness and bounties of the harvest. Sacrifices of fruit, wine, honey, and milk were made. The Romans appear to have had a similar festival at harvest-time called *Cerelia*, a time of rejoicing and thanksgiving.

In England, as in other countries, it was customary to hold special days of fasting and prayer in times of peril, of famine, of pestilence. When the danger was past—when there was plenty of food, plenty of water, no ravaging diseases—feasts and celebrations would be given by the people. These celebrations were fundamentally thanksgiving festivals. A special day of thanksgiving was proclaimed by Oliver Cromwell at the time of the defeat of the Spanish Armada. Another day of thanksgiving was declared on the day that the famous Gunpowder Plot was discovered.

The Siamese have an old festival known as the "Swing Festival," which is like our Thanksgiving. Its purpose is

to show gratitude for the richness of the land, the happiness of the people. It is in this festival that the much-quoted sacred white elephant of Siam takes conspicuous part.

But although there have been many days of thanksgiving and rejoicing, and although many festivals like our Thanksgiving exist in various parts of the world, America was the first nation definitely to set apart one day in each year for the sole purpose of rejoicing in the good things of life and "giving God thanks."

The First Thanksgiving.—We are all familiar with the appalling hardships that the first settlers in America were forced to endure. A handful of homesick men and women in a strange, bleak country, Indians everywhere, food scarce, and home across the ocean. No,—home here, for they could not return to the land from whose intolerance they had fled.

In the first year, forty-six of the one hundred and one white people who settled in Plymouth died and were buried on the bluff overlooking the landing. But in the Fall of 1621 the remaining men of Plymouth gathered in a wonderful crop from the twenty acres of corn and six acres of barley and peas they had planted. And the cold weather brought unexpectedly large quantities of game into the harbour. Plenty of food—and a great new hope in the hearts of the wanderers.

Governor Bradford gave directions that a day of thanksgiving be held on December 13, 1621, to give thanks for the great blessings that had been bestowed upon them. A feast was prepared including "as much fowle as with a little helpe beside, served the company almost a weeke." Friendly Massasoit with ninety of his Indian braves, was invited to the feast, and they came in all their holiday paint and feathers. Of white men and women there were only fifty-five at this First Thanksgiving.

Although Thanksgiving did not then become a regular yearly festival, our own Thanksgiving, which we observe every November, is a direct legacy of that historic feast

with the Indians. It has not been definitely established just when Thanksgiving became a fixed annual observance in New England.

A great public Thanksgiving was held in Boston on February 22, 1630, by the Bay Colony. It was a celebration in gratitude for the safe arrival of the ships bringing food and friends from across the ocean.

From 1630 to 1680 there were about twenty Thanksgivings—Days—one every two or three years. In 1675, when the Indians attacked the settlers and engaged them in various widely separated warfares, there was no Thanksgiving. In 1742 there were two such festivals.

It was not until after the Revolution, when Congress adopted the Constitution (1789), that Thanksgiving was definitely established as a yearly day of rejoicing and festivity. Just before the Congress adjourned, a man by the name of Boudinot moved that a day be recommended for universal thanksgiving. The motion was carried, and President Washington appointed Thursday, November 26th, as the "National Thanksgiving Day."

For a little while the holiday was observed faithfully, but somehow a break occurred, and one by one the states began to observe the day of Thanksgiving at different times. Just before the Civil War each state had a different day on which to observe Thanksgiving, but all these days were in November.

Carrying out Washington's first intention, Lincoln in 1860 appointed a national Thanksgiving Day to be observed by everyone alike. This day was the last Thursday in November, and so it has remained ever since.

The Puritan Distaste for Christmas Helped to Establish Thanksgiving.—The first Thanksgiving was unquestionably held in the winter of 1621 and was a simple, whole-souled expression of gratitude, voiced by a handful of people who found themselves suddenly saved from starvation. There are some writers, however, who attribute the establishing of Thanksgiving to an entirely different and unrelated cause.

It seems to be a common notion among writers on this subject that "To the mind of the Puritan, Christmas smelled to heaven of idolatry." They believe that the Puritans abolished Christmas as a hateful relic of popery, and that they established Thanksgiving as a purely Puritan festival to take its place.

Wanting a day to replace Christmas, says one writer, the Puritans "appointed every year some day in autumn, generally toward the end of November, as a day of solemn prayer and thanksgiving for the blessings of the year, and especially the bounties of the harvest."

According to this belief, Thanksgiving was simply a day of rejoicing and family reunion in November instead of December. The Puritans ate turkey, Indian pudding and pumpkin pie instead of the "superstitious meats and plum-pudding" of Christmas-time. But, we are told, the influx of Roman Catholics and Episcopalians brought Christmas and its customs into vogue again, and both holidays were accepted.

The distaste for Christmas among the Puritans may very possibly have helped to establish Thanksgiving as a national festival. There are even to-day certain people who regard Christmas as a strictly heathen holiday. But we can be absolutely certain that Thanksgiving had its true inception in 1621 when fifty-five grateful men and women, surrounded by ninety painted Indians, gave thanks for the corn and the fowl upon which they feasted.

Thanksgiving Customs.—On Thanksgiving Day children dress themselves in grotesque fashion, paint their faces, wear masks, and go about the streets singing or blowing on horns. This custom commemorates the presence of the Indians, in their gay paint and feathers, at the first Thanksgiving. The children preserve it because of the joy it affords them, little savages that they are. It delights the primitive personality to dress up in gay costume, paint the face, and parade around the streets.

The practice of disguise at times of festivity is very old.

In an ancient Argive festival held yearly like our Thanksgiving, the women dressed in men's garments and the men donned women's robes and veils. In the old Roman Saturnalia the slaves exchanged position and dress with their masters, and the men and women exchanged dress.

The custom of singing in the streets and of going from house to house begging for pennies is English in origin. It was an old custom for children, and even grown people, to sing carols in the street at Christmas-time, passersby throwing coins to them. A similar custom was for poor women to go from house to house, carrying images of the Virgin and Child or of Christ on the cross, receiving dole at each house visited. To-day the youngsters in the street at Thanksgiving-time shout, "Anything for Thanksgiving!" to all passersby, and even parade from one house to another.

Pumpkin pie and turkey are associated with the Thanksgiving feast because both appeared on the table of the first Thanksgiving. Corn, having played a large part in inspiring the Puritans to give thanks, usually appears in some form or other on the Thanksgiving table.

Cranberries have no definite significance. The fruit happens to ripen at the end of October, which makes it an opportune Thanksgiving "fixin'."

Thanksgiving is a time of great social activity, because the spirit of hospitality is woven eternally into this festival. The Puritans invited Massasoit and ninety of his men to their feast. The hostess to-day invites more friends and acquaintances to her dinner or party at Thanksgiving than she does ordinarily. Somehow one feels more strongly at this time of the year than any other the urge to give, to share, to be hospitable.

Before the Civil War it was a popular custom for families to hold great reunions on Thanksgiving. The children came home from school; the married sons and daughters came with their families; aunts, uncles, cousins, everyone came to the great Thanksgiving feast. During the war,

and for a while afterward, this custom of family reunion at Thanksgiving ceased but was later revived. Many families still observe this old custom of reunion on Thanksgiving Day.

The custom of making up baskets of food for needy families originated in the early 18th century and was commenced by a group of young women who determined to set aside one period of each year to be devoted entirely to purposes of charity. They selected Thanksgiving as the most opportune time.

Accordingly, at Thanksgiving-time they packed baskets to brimming with all good things to eat and took them personally to the home of the needy. Word of what they were doing spread, and soon there were many people observing this worthy custom. Organizations were founded for the purpose of supplying food and clothing to the needy at Thanksgiving. The custom has survived, as good things do, and the charity-basket is one of our most gratifying Thanksgiving observances.

Thanksgiving Entertaining.—Thanksgiving and hospitality go hand-in-hand. There is probably no better time of the year to entertain.

Every hostess knows the old tradition that at Thanksgiving good food is as important as good fun, and that the games played hold but second place to the food served. Turkey, of course, is inevitable; and there is nothing like a great pumpkin pie for Thanksgiving atmosphere!

But remembering the background upon which this first of our purely American holidays is built, the hostess plans to have as much good cheer as good cooking. She starts off right by having the proper kind of setting. The table decorations, for instance, are simple fruits and vegetables, instead of the customary flowers. For the centrepiece a huge pumpkin may be used, banked around with polished apples, golden corn, autumn leaves, and nuts. At each place there may be a scooped-out apple filled with shelled nuts, or perhaps just slightly scooped out to hold a candle.

Sometimes a great yellow paper pumpkin is used for the centrepiece, and it is filled with favours for the guests. Green and orange ribbons attached to the favours reach out across the table and end under the service plate. Thanksgiving candles are usually shaded with yellow shades upon which tiny black turkeys have been pasted. The shades can be made of crêpe-paper; the turkeys can be purchased at any stationery shop.

True to the traditions of the day, the hostess uses all her finest and most cherished silver and chinaware. But she brings forth also her rare old pieces of Colonial chinaware, her curious pewter heirlooms; and if there is an old family spinning-wheel in the attic, it is tenderly carried downstairs, dusted, and given place of honour in the reception room.

The Thanksgiving dinner, by custom, is a jolly old-fashioned affair with no hint of formality. On any other occasion, the hostess may whisk her guests through several courses of dinner and hurry them into the drawing room, but not on Thanksgiving! It is the one time of the year when everyone likes to linger at the table, browsing in mellow lanes of memory, reminiscing fondly until the last candle has sputtered and died.

According to that delightful old authority, Mr. E. H. Arr, Thanksgiving is not Thanksgiving at all if the pie is lacking. It need not be pumpkin pie, says Mr. Arr, as he naïvely suggests his own favourite—mince pie. And he proceeds to inform us that:

The true Thanksgiving mince pie should be an inch thick, with a thin flaky crust tinted by its imprisoned juices which threaten to break through. Around its edges must be a slight crinkle made by the tines of a fork, and in its top a hole here and there from the stroke of a knife to let the steam out. This steam, once known, can never be forgotten.

It typifies the joyous, generous Thanksgiving spirit, that steaming mince pie!

Some Popular Thanksgiving Games.—Memories of

wonderful games are entangled in our recollections of childhood Thanksgivings. Most of these old favourites have survived and are still a part of modern Thanksgiving festivity.

At the first Thanksgiving, the Indians entertained with weird dancing, pantomime, feats of skill. The others, according to Edward Winslow, "among other recreations . . . exercised our arms." For three days, they feasted and made merry, and somehow the spirit of jollity has hovered about the holiday ever since.

An old Thanksgiving game is called the Cranberry Contest. A large bowl of cranberries is placed on the floor and around it are seated from four to ten contestants. Each one is supplied with a spool of thread and a needle. At a given signal they thread the needle and begin to string the cranberries into a necklace. At the end of three minutes the one with the longest necklace receives the prize. A booby prize is usually awarded the person with the shortest necklace.

The Corn Game is very old but is always popular because it is in memory of the five grains of corn which tradition tells us were allotted to the Puritans. Five ears of corn are hidden in the room, and the guests begin a search for them. The five to find the ears of corn are the contestants in the game; the others are interested on-lookers.

At a given signal, the five contestants begin to remove the kernels from the corn and drop them into a bowl which has been placed on the floor for the purpose. The one who removes all the kernels in the shortest time receives a prize.

Now all those who have not competed, gather around the bowl and guess how many kernels there are in it. A large box of popcorn is presented to the person whose guess comes closest.

In the old-fashioned Pumpkin Race, always a favourite, small pumpkins are rolled over a certain distance with small

wooden spoons. The smaller the spoons the greater the fun! The pumpkins roll this way and that out of line, and must be coaxed back into line again, but the hands may not be used. The tiny spoons must do all the coaxing. Of course, there is a great deal of fun for the onlookers. The person whose pumpkin reaches the goal first receives a prize.

Games such as these help preserve the old Thanksgiving traditions and add a certain jolly informality to the occasion, whether it be a Pumpkin party, a Mayflower luncheon, a Puritan tea, or just a good, old-fashioned Thanksgiving dinner.

CHRISTMAS

Out of the distant past comes a whispered greeting that warms the heart of humanity. Merry Christmas! It echoes and reëchoes back across the long ages. It throbs through the generations of life, while kingdoms rise and fall, while men and nations move like checkers on a checker-board.

Merry Christmas! It stirs the heart like some beautiful old memory. It quickens the pulse like a passionate violin. We forget to play at being grown-up, and in a moment we are all children again.

Of all the old festivals [says Washington Irving], that of Christmas awakens the strongest and most heartfelt associations. There is a tone of solemn and sacred feeling that blends with our conviviality, and lifts the spirit to a state of hallowed and elevated enjoyment.

All yesterday is strewn with the embers of old Christmas fires. It is the festival of the nativity. From the early centuries of Christianity the anniversary of the birth of Christ has been celebrated. It is called "Christmas" because in early England the festival was called "Christes messe" which means "Christ's mass."

At first the time of the festival varied in different places.

Some churches observed it in December, others in January, April, May. There was no historical record as to the exact birth date of Christ. It seems possible that December 25th was established as the festival day—as Christmas—because it marked the beginning of the great winter festival when Britons, Germans, and Gauls made merry in pagan fashion. Christmas replaced these old pagan festivals, the customs and symbols of the one blending into the customs and the symbols of the other.

The celebration of December 25th, as Christmas, spread to various parts of the Christian world. By the 5th century it had become fairly well established. Later, as the festival spread, differences in date occurred owing to differences in calendar. But the general belief prevailed that Christ was born “at the hour of midnight on Christmas Eve.”

Tracing the Christmas Festival.—Many of our popular holidays appear to have been nature festivals at one time. Easter and May Day were very likely spring festivals; Hallowe’en, an autumn festival.

Christmas was originally a festival of the winter solstice. At this period of the year it was customary to hold great feasts in honour of the heathen gods, to dance and make merry. But the early teachers of Christianity prohibited these primitive festivities as unsuited to the character of Christ.

Yet the old festival was not discarded entirely. Its symbols and customs were adapted to the new festival in celebration of the anniversary of Christ’s nativity. And so we find Christmas patterned with many curious customs that are of pagan origin. The Yule log, the holly, and the mistletoe go much farther back into antiquity than we suspect.

It is said that the first Christmas-day festival held in Britain was celebrated by King Arthur in the city of York, A.D. 521. It lasted several days. The new customs were grafted upon the old, and the new symbols were adapta-

tions of old ones. The festival appealed instantly to the masses; a tiny spark was fanned into flame and it has burned brightly throughout all these generations.

By the early Middle Ages, Christmas had become the greatest of popular festivals. Beggar and king observed the day. Churches were decorated and quaint plays concerning the nativity were enacted. Carols were sung in the streets and images of the Virgin and of Christ were carried about from house to house. And of course there were feasting and merrymaking, as there always are at a festival time.

In Shakespeare's time the Christmas festivities were extremely elaborate. Sometimes they lasted until Twelfth Day, or Epiphany—twelve days after Christmas. During this period there was no work of any kind. The people gave themselves over to feasting and gay celebration.

Then there was a reaction, as there generally is. The Puritans developed a keen distaste for the Christmas festivities, and prevailed upon Parliament to prohibit them. Christmas was declared a day of fast, and festivities were prohibited by law. After the Restoration, however, the old observances came back—somewhat subdued, but gay and festive as ever.

The observance of the Christmas festival spread all over the Christian world. The date is not everywhere the same, nor are the customs identical. January 6th is the date observed in the Armenian church. The Dutch watch for St. Nicholas on the eve of December 6th. The French have their own particular Christmas observances; the Germans have theirs. But wherever and whenever Christmas is celebrated, it is a day of rejoicing and good cheer.

CHRISTMAS CUSTOMS

At one time the customs and observances that we associate with Christmas had a very definite significance. Today they survive as part of our social scheme.

In America we have made of Christmas a period of great social activity. The old customs of other lands, combined with tender memories of the first Christmases in this country, make of the holiday a rare interval of joy and cheer which find expression in a semi-social, semi-religious celebration. Everybody wishes everybody else a merry Christmas, and even the echoes are glad!

The first Christmases in America were not the gay festivities to which we are accustomed. They were days like all the rest, devoted to work and prayer. Governor Bradford wrote, "Ye 25th day begane to erect ye first house for comone use to receive them and their goods." A few years after this was written the Church of England established Christmas services in Boston.

Our Christmas celebration carries threads from many lands. People coming here from France, England, Germany, Norway, Italy—all brought their own customs with them. Our Christmas tree and Santa Claus are imported. Our carols and our stocking superstition came from across the ocean. Even our "Merry Christmas" belongs to England.

Yet our Christmas festivities are individual, American. They are like those of no one country, but like a tapestry that has been patterned with many beautiful threads, our festivities reflect the customs, beliefs, and superstitions of many and widely separated lands.

Santa Claus.—Jolly old Santa Claus with his tinkling sleigh bells and pack of toys is very closely associated with the American Christmas. Our children hang up their stockings in high glee, fully believing that Santa will come down the chimney and fill them with good things, until, of course, they are old enough to separate fact from fancy, or until some cruel person shatters the beautiful belief.

Santa came to America by way of Holland. The old Dutch settlers of New York brought with them all the joyous and hospitable observances of their fatherland. They introduced to their neighbours in the New World St.

Reproduction of Seshesh-Sistrum, a favourite musical instrument of other days.

Nicholas, or San Nicolaas, patron saint of children. And San Nicolaas promptly grew a long white beard, belted his jovial stoutness in a red coat, and made his bow to America as Santa Claus!

England, too, has its Santa Claus. The name appears to be derived in slurred interpretation from San Nicolaas, the English for which would be St. Nicholas. According to the popular myth, both here and in England, Santa Claus is supposed to sweep down from the north in a sleigh drawn by reindeer, come down the chimney, and fill the stockings hanging before the fireplace with gifts.

We have already seen how this myth might have originated. It seems to have developed from the custom, in old England, of cleaning out the chimney at the beginning of the New Year to enable good luck to enter the household (see p. 280).

An old myth, according to Hone's "Ancient Mysteries," accredits St. Nicholas with being the Bishop of Myra, a person of great virtue and piety. The old legend says that

the sons of a rich Asiatic, on their way to Athens for education, were slain by a robber innkeeper, dismembered, and their parts hidden in a brine tub. In the morning came the Saint, whose visions had warned him of the crime, whose authority forced confession, and whose prayers restored the boys to life. . . .

Ever since, St. Nicholas has been the special saint of the school-boy, and certain of the customs of the montem day at Eton College are said to have originated in old festivals in his honour. ("The Book of Christmas.")

St. Nicholas became everywhere the child's saint, though his personality underwent some striking changes as he travelled from country to country. In Holland he remained St. Nicholas, but his personality was modified by memories of Woden, god of the elements and the harvest. He became the patron saint of the children of France, although it is Bonhomme Noël (Father Christmas, sometimes called Père Noël) who brings the good things for the children. In Germany the Christkindlein is the patron saint of the children. From this German phrase for Christ

Child comes our synonym for Santa Claus—Kriss Kringle.

Among the Norwegians, the toys are hidden away in unexpected places and the children search for them. In Italy the gifts are drawn from what is known as "The Urn of Fate." This custom originated with the ancient Romans who had also an "Urn of Fate" from which gifts were drawn. In Spain there are elaborate street festivals at which the children receive gifts.

This age-old custom of presenting the children with gifts makes Christmas one of our most enjoyable festivals. In "Elizabeth and her German Garden" the thought is beautifully expressed.

For days beforehand, every time the three babies go into the garden they expect to meet the Christ Child with His arms full of gifts. They firmly believe that it is thus their presents are brought, and it is such a charming idea that Christmas would be worth celebrating for its sake alone.

Hanging up the Stocking.—There is an ancient tradition in Holland that St. Nicholas makes his rounds upon Woden's horse, Sleipner. This famous old horse of Dutch mythology is represented by the reindeer whose hoofs our children are supposed to hear on Christmas Eve.

According to the old tale, the children of Amsterdam set their little wooden shoes in the chimney corners because they believed Sleipner would pass by unless he saw them there. And St. Nicholas would leave no gifts unless he saw the little shoes all in a row by the chimneyplace and so knew that the children were tucked away in bed. Evidently some parents of long ago created the myth for their own convenience; it spread quickly, as such things do, and gradually became an established custom.

From Holland the custom spread to France, and children were taught to place their wooden shoes upon the hearth to receive the gifts of Bonhomme Noël. In Germany and Scandinavia the gifts are not placed in the shoe, but hidden in out-of-the-way places about the house.

The stockings that the children of England and the

United States hang up on Christmas Eve developed from the shoe. Shoes won't stretch, you know, and stockings are so much more roomy! Thus the shoe of Amsterdam became the stocking of New Amsterdam, and the custom was established.

There existed in the east of Russia, among the peasantry, an old custom whereby the young girl discovered through divination whom she would have as husband. The traditional formula, still prevalent, is, "Come and take my stockings off." Among the professional classes, and sometimes in the lesser nobility, parents placed money in the stockings of their child—boy or girl—at marriage as a gift for the other partner in the ceremony. Some writers, prominently among them Havelock Ellis, believe that the custom of hanging up the stocking at Christmas is a relic of these two customs from Russia.

The Christmas Tree.—The origin of the Christmas tree is much disputed. Many countries claim the honour of having given the custom to the world. There are scores of popular legends concerning its origin.

One popular tale describes Martin Luther as

attempting to explain to his wife and children the beauty of a snow-covered forest under the glittering star-besprinkled sky. Suddenly an idea suggested itself. He went into the garden, cut off a little fir tree, dragged it into the nursery, put some candles on its branches and lighted them.

It appears that this happened on Christmas Eve, and the tale seeks to explain not only the origin of the tree, but the origin of the Christmas candles. One of the most popular of German engravings represents Luther and his family grouped about this first Christmas tree.

There is still an older German legend which makes St. Winfrid the originator of the idea. According to this legend the Saint, in the midst of a great crowd of converts, hewed down a giant oak which had been used in Druidic worship. When the tree was half hewn, a great wind passed over the forest and gripped the tree, sending it in

a crashing heap backward. Everything in its path was ruined except a slender fir tree, which remained standing, its green spire pointing toward the sky. Because of the seeming miracle, Saint Winfrid decreed that the fir be known as the holy tree, the tree of the Christ Child.

An ancient Scandinavian myth speaks of a "service tree" which is supposed to have sprung

from the blood-drenched soil where two lovers had been killed by violence. At certain nights in the Christmas season mysterious lights were seen flaming in its branches, that no wind could extinguish.

These "mysterious lights" seem to point to a possible origin for our bright-coloured globes which decorate the Christmas tree.

It has been explained [says one authority of the tree] as being derived from the ancient Egyptian practice of decking houses at the time of the winter solstice with branches of the date palm—the symbol of life triumphant over death, and therefore of perennial life in the renewal of each bounteous year.

Among the Egyptians the date palm is also an emblem of the starlit firmament.

At about the time that the Egyptians were decking their houses with date-palm branches, the Jews were celebrating their Feast of Chanuckah, in which lighted candles are a feature. Some writers regard this as significant. It is equally interesting to note that the Greek festival at about this season is called the "Feast of Lights"; and the Chinese festival of a corresponding period is called "The Feast of the Lanterns."

The French also have a legend concerning the Christmas tree. They say that in the 13th century a gigantic tree was found, the branches of which were covered with candles, of which some stood erect, some upside down. On the top appeared a vision of a child with a halo around its head. The Pope was asked to explain this extraordinary tree. He said that the tree represented mankind, the child was the Saviour, and the candles were meant to indicate

the good and bad human beings. Thenceforth, according to this myth, the Christmas tree was used at every Christmas-time to bring happiness and good cheer into the home.

Several writers trace the tree back to the Roman festival of Saturnalia. In this ancient festival the pine trees were decorated with images of Bacchus, and the Christmas tree is believed by some to be a survival or relic of this old custom.

All these vague traditions appear to have blended together, resulting finally in the permanent establishment of the Christmas tree. The development was most marked in Germany. An authentic German manuscript of 1608 refers to the tree as a regular feature of the Christmas season. For about two hundred years the custom of the tree was confined to the regions along the Rhine, then suddenly it spread all over Germany.

From Germany the custom of decorating the fir tree with candles and covering it with gifts spread everywhere. The marriage of Queen Victoria to the German prince introduced the custom into England as a regular Christmas institution. But the tree was known in England even before that period, for in the memoirs of Greville, under date of December 29, 1829, we read that at a Christmas fête given in honour of Henry VIII, "three trees, in great pots, were put upon a long table covered with pink linen." It was only with the marriage of Queen Victoria, however, that the Christmas tree became a regular English institution.

The French borrowed the custom of the Christmas tree from the Germans in 1870. It was during this year that the German Army celebrated Christmas in Notre Dame. The tree idea appealed to the French, and they adopted it. They usually plant the entire tree, root and all, in a tub.

The German emigrant brought the Christmas tree to America, and we borrowed it along with our other Christmas customs. With us, however, it is intended for the children; in Germany, gifts for all members of the family, from the youngest to the oldest, are on the tree.

The Exchange of Gifts.—Christmas gifts, according to most authorities, were invented to take the place of the pagan custom of exchanging gifts at the New Year. St. Augustine is reputed to have called New Year's gifts "diabolical" and Chrysostom preached that the customs of the New Year made it a "Satanic extravagance." These early divines suggested Christmas gifts as a substitute, for good will, generosity, and kindness are part of the Christmas spirit. The new custom was adopted, but the old one survived in various places. We are unfortunate in having survivals of both!

In old England [says one writer], St. Stephen's Day was chiefly celebrated under the name of Boxing Day—not for pugilistic reasons, but because on that day it was the custom for persons in the humbler walks of life to go the rounds with a Christmas box and solicit money from patrons and employers. Hence the phrase Christmas box came to signify gifts made at this season to children or inferiors, even after the boxes themselves had gone out of use. This custom was of heathen origin and carries us back to the Roman Paganalia when earthen boxes in which money was slipped through a hole were hung up to receive contributions at these rural festivals.

The Romans had also what was known as the Priests' Box. This was placed upon all outgoing ships and the people were required to put money or gifts in it. At Christmas the box was opened, mass said, and the gifts distributed among the poor. The box received the name Priest's Box because the gifts were originally intended for the priest; but later it became known as the Christmas box, and the contents were distributed among the people. The custom was very popular.

The exchange of gifts, and particularly the presenting of gifts to children, became associated with Christmas at a very early period; and it has not only survived through all the generations, but has become more and more pronounced. Here in the United States Christmas is the great gift time of the year.

Origin of the Christmas Card.—The custom of calling "A Merry Christmas" to one's friends and neighbours

originated with the English long ago. An old English custom was to shout this greeting from the window on Christmas morning.

Later it became the custom for the people to write one another congratulatory letters on religious and festival days. Bernard Picart mentions this custom in his "Ceremonies and Religious Customs" (vol. II, p. 4). The Christmas greeting was penned along with others.

W. S. Walsh, in his "Curiosities of Popular Customs," sums up the true origin and development of the Christmas card in an interesting fashion. He says:

The Christmas card is the legitimate descendant of the "school pieces" or "Christmas pieces" which were popular from the beginning to the middle of the 19th century. These were sheets of writing-paper sometimes surrounded with those hideous and elaborate pen flourishes forming birds, scrolls, etc., so unnaturally dear to the hearts of writing masters, and sometimes headed with copper-plate engravings, plain or coloured. These were used by schoolboys at the approach of holidays for carefully written letters exploiting the progress they had made in composition and chirography. Charity boys were large purchasers of these pieces, says one writer, and at Christmas time used to take them around their parish to show and at the same time solicit a trifle.

The Christmas card proper had its tentative origin in 1846. Mr. Joseph Cundall, a London artist, claims to have issued the first in that year. It was printed in lithography, coloured by hand, and was of the usual size of a lady's card.

Not until 1862, however, did the custom obtain any foothold. Then experiments were made with cards of the size of an ordinary *carte de visite*, inscribed simply "A Merry Christmas" and "A Happy New Year." After that came to be added robins and holly branches, embossed figures and landscapes.

To-day of course, the exchange of greeting cards at Christmas-time is an established custom. Stock cards are printed and sold in the stationery shops. Some people have individual cards engraved. Millions of these greeting cards are mailed every year.

The Holly and the Mistletoe.—A century ago, William Hone, in his "Every-Day Book," wrote, "Girls, although they be ladies, are kissed under the mistletoe." This old

Druidic custom has survived many generations and is still popular.

Among the ancient Druids, the mistletoe was regarded with the utmost veneration. They cut sacred mistletoe with a golden knife and hung it over their doors to propitiate the woodland spirits. According to myth, only happiness could enter under the mistletoe. Hence our tradition of the kiss.

At the period of the winter solstice the Druids celebrated with a great festival. Ceremonies took place in the forest dedicated to the gods—so dedicated because of the mistletoe that grew there. Many of the rites and ceremonies observed at these ancient Druidic festivals were in connection with the mistletoe.

In ancient Scandinavian mythology it is noted that the mistletoe was gathered at the time of the winter festival and distributed in small quantities among the people. Each person hung up a bit of the mistletoe above the entrance to his or her dwelling-place, the purpose being to keep out the evil spirits. This corresponds with the custom of the ancient Druids, and similar rites in connection with the mistletoe are noted among other Celtic nations.

The ancient Romans used laurel as an emblem of peace, joy, and victory. Later the laurel was adopted by Christian people and used as decoration in the windows of the houses, to indicate that Christ had entered there. Ivy and holly replaced the laurel in old England, the reasons being given by this old English song:

The Holly and the Ivy,
Now both are full well grown;
Of all the trees that spring in wood,
The Holly bears the crown.
The Holly bears a blossom,
As white as lily flow'r;
And Mary bore sweet Jesus Christ,
To be our sweet Saviour,
To be our sweet Saviour.

The Holly bears a berry,
 As red as any blood;
 And Mary bore sweet Jesus Christ,
 To do poor sinners good.
 The Holly bears a prickle,
 As sharp as any thorn;
 And Mary bore sweet Jesus Christ,
 On Christmas Day in the morn,
 On Christmas Day in the morn.

The Holly bears a bark,
 As bitter as any gall;
 And Mary bore sweet Jesus Christ,
 For to redeem us all.
 The Holly and the Ivy,
 Now both are full well grown;
 Of all the trees that spring in wood,
 The Holly bears the crown,
 The Holly bears the crown.

The holly wreath appears to represent the crown of thorns which Christ wore on the cross, the little red berries symbolizing the drops of blood.

Some Popular Christmas Customs.—Burning the Yule log is an ancient Christmas custom which originated with the Scandinavians. At their feast of Juul, during the winter solstice, they kindled huge bonfires in honour of the god Thor. The ancient Goths and Saxons had winter festivals which they called Jul. Christmas is still frequently referred to as Yuletide.

In feudal times, the bringing in of the great yule log to the wide hearth in the baronial hall was one of the most joyous ceremonies connected with the festival. The men hewed down the greatest log—or clog, as it was called—singing merry yule songs while they dressed it and dragged it to the hearth.

Speaking of the clog, Hervey says:

This huge block, which, in ancient times, and consistently with the capacity of its vast receptacle, was frequently the root of a large tree, it was the practice to introduce into the house with great ceremony, and to the sound of music.

According to Herrick, the yule clog "was to be lighted with the brand of the last year's log, which had been carefully laid aside for the purpose, and music was to be played during the ceremony of lighting." The burning of the yule log is now practically obsolete, although it is still a beloved and picturesque custom in various rural districts.

In this country it is a practice at Christmas-time to plant a great community tree, decorating it with coloured electric

Dragging the Yule-log to the castle-hearth—a joyous occasion during the feudal Christmas festivities.

bulbs and with a great star at the top. Huge crowds gather about the illuminated evergreen and sing Christmas songs. This custom had its origin in the elaborate street festivals of Italy and Spain. In these two countries there are fires and fireworks, and a great deal of street celebration. Some trace the origin to the old Scandinavian custom of placing a sheaf of grain on a tall pole in the dooryard "for the birds on Christmas morning."

The Christmas cakes, the iced cookies and gingerbread figures which are a part of our Christmas goodies are survivals of the confectionery gifts presented to the senators of Rome in early times. The cakes were in the form of figures of animals and people. Later the cakes became more elaborate, and were adopted as Christmas cakes. In early England these cakes were very popular. They were given to the poor women who sang carols in the street, or who went from house to house with images of the Virgin and of Christ.

The singing of carols originated in England. The word carol itself is said to be derived from *cantare*, to sing, and *rola*, an interjection of joy. The word was first applied to the bishops who carolled, or sang joyful hymns, at Christmas-time. Later it became more general.

We quote from Compton's "Pictured Encyclopedia" this paragraph concerning Christmas carols:

Almost every land of Christendom has its own Christmas carols. In England "waits" sing under windows on Christmas Eve, as they have done for countless Christmases. In Russia the ancient Kolyada songs, once sung to pagan gods, now dedicated to Christian saints, are sung about the streets. The French Noël songs, and the famous German *Kristlieder* are heard wherever there is Christmas music. In our own land, choirboys and schoolchildren hold carol parties and go about singing these old-time songs for "shut-ins" and other unfortunates.

According to tradition, this is the very first Christmas carol ever sung:

Fear not: for, behold I bring you good tidings of great joy, which shall be to all people. For unto you is born this day in the city of David a Saviour, which is Christ the Lord.

And this shall be a sign unto you; ye shall find the babe wrapped in swaddling clothes lying in a manger.

Chorus

Glory to God in the highest, and on
earth peace, good will toward men.

The giving of charity and gifts to the poor at the Christmas season originated with the belief that the Christ Child

sometimes came to the door in the guise of a beggar. Elise Traut relates the old legend that on Christmas Eve the Christ Child wanders all over the world, going from castle to hovel, up hills and down valleys, in search of the good and the deserving. He pleads for succour at the various homes he enters, usually appearing as a beggar or humble wanderer. Because of this legend beggars were rarely turned away on Christmas Eve, and aid rendered the beggar was, and is still, looked upon as hospitality shown to Christ. Following close upon this custom came the now universal one of bestowing charity to the poor at Christmas-time.

Christmas Entertaining.—That Christmas is a time of gaiety and feasting is traditional. This account, by some forgotten writer of long ago, brings to mind the Christmas of yesterday and how it was celebrated:

Now capons and hens, besides turkeys, geese and ducks, with beef and mutton—must all die; for in twelve days a multitude of people will not be fed with little. Now plums and spice, sugar and honey, square it among pies and broth. Now or never must music be in tune, for the young must dance and sing to get them a heat, while the aged sit by the fire.

To put the “merry” into “Merry Christmas” to-day, the hostess must borrow a bit of old-fashioned foolishness, add to it the flavour of steaming plum pudding and popcorn, sprinkle it well with a measure of good cheer, and serve with a sprig of mistletoe! Whether the entertainment takes the form of an intimate family reunion, or a great jolly party, it must be imbued with the proper Christmas spirit.

Not so very long ago it was customary to have huge wreaths and laurel ropes drooping from every corner. Now a sprig of mistletoe and a bit of holly with “its berries like reddened pearls” are used for the Christmas decoration. A custom delightfully old-fashioned is to have an untrimmed evergreen flanking each side of the front door outside the house.

Another old-fashioned custom, which is said to have been originated in Colonial days, is to include a tiny bit of the mistletoe in the invitation. It is slipped into the envelope with the card "to carry the season's good tidings." It is really meant as a wish or omen for happiness and prosperity throughout the coming year.

Decorations for the Christmas table are not difficult to achieve. One may have a flat bowl of coloured glass piled high with fruit. Or one may have a slender silver vase with a cluster of holly in it, or perhaps a lower vase with cut winter flowers. An old custom is to have a miniature tree in the centre of the table bearing gifts or favours for the guests. Of course, candles are used for illumination at the Christmas dinner, whether it be formal or informal, because they carry out an old Christmas tradition.

There are many old superstitions that cling to the popular Christmas foods. To refuse a piece of mince pie at a Christmas dinner, for instance, means ill luck for the year. To eat apples at midnight on Christmas Eve is to enjoy great health during the year. If a loaf of bread is allowed to remain on the table after the Christmas Eve celebrations, there will be no lack of bread in the house for the next twelve months. According to the old tradition, "by all means you must have a plum pudding—a plum pudding grown rich and black and solid." Otherwise, it seems, you will lose a friend between this Christmas and next!

It is interesting to have an English Christmas party, observing all the many English customs which have contributed to our own Christmas observances. The invitations are printed in Old English text. The home is decorated with mistletoe, holly, ivy. Wax tapers, in brass, iron, or pewter candlesticks add the proper touch in illumination. For the centrepiece a boar's head, made of dough, should be used. If it is made large enough, it can be used to cover the little roast pig with the traditional apple in its mouth which constitutes one of the main courses of the dinner.

At an English dinner the wassail cup must be passed around. Drinking the wassail is an old English custom.

They sat down by the huge fire of blazing logs to a substantial supper [says Charles Dickens], and a mighty bowl of wassail, something smaller than an ordinary wash-house copper, in which the hot apples were hissing and bubbling with a rich look, and a jolly sound that were perfectly irresistible.

Instead of containing the brew, ale, or steaming punch of the old-time wassail bowl, the cup at our modern English dinner may contain any mild punch or soft drink that the hostess likes. It is passed around just to carry out the old custom, and to "wish cheer with the brimming cup."

After dinner the guests repair to the drawing room, which is illumined solely with candles and is decorated with mistletoe suspended from unexpected places. The famous old English games are played, old Christmas carols are sung, and old Christmas traditions related. If possible there should be a glowing yule log in the fireplace.

Mary Dawson gives some interesting old English games appropriate for Christmas-time in her "Book of Entertainments."

Perhaps you would prefer a German dinner with all its pretty customs. Use as a centrepiece for the table a diminutive representation of the Nativity, and have a tiny Kriss Kringle or small, decorative Christmas tree at each place. Have gifts packed and marked with the names of the persons for whom they are intended, hidden everywhere throughout the house. After dinner the guests search for the gifts, which are exchanged among them as each new one is found, until every guest has his or her own gift. This is an old German custom, and is always good fun if the guests are young people.

The Druidic Christmas dinner would carry out all the traditions of the Druids. There would be a great fire crackling merrily in the fireplace. There would be mistletoe hanging everywhere. There would be a jolly feast,

with nuts and apples and all good things to eat. And after the dinner there would be music, dancing, entertainment.

The Scandinavian Christmas dinner could be made most delightful. The menu may be the same as one would select for any ordinary Christmas dinner—turkey, roast meats, mince pie, fritters, nuts, raisins, apples, whatever one likes. But there would be a huge tree in the drawing room hung with coloured balls and made beautiful with tiny lighted candles. There would be gifts on the tree for each guest, and in each gift package a card bearing some delightful bit of wisdom or cheer from the old Scandinavian writings. And of course there would be a yule log, a great roaring fire, and perhaps the host, in the part of Thor, would quote interesting bits of Scandinavian mythology.

Whatever form the Christmas entertainment takes, it must be free from formality. There must be plenty of good cheer and fun; the day is one of rejoicing. For generations it has been customary to play favourite old games on this day and to make merry with one's family and friends. As Dickens has Mr. Wardle say to Mr. Pickwick:

Everybody sits down with us on Christmas Eve, as you see them now—servants and all; and here we wait till the clock strikes twelve, to usher Christmas in, and while away the time with forfeits and old stories. Trundle, my boy, rake up the fire!

CHAPTER XV

THE DANCE

Civilization is a process of making life more complex and subtle. We have the piano, the violin, the orchestra. Yet we have also ragtime, which is a reaction from the nervous tension of American commercial life, a swinging back to the old days when man, though a brute, was free. There is a release and exhilaration in the barbaric, syncopated songs and in the animal-like motion of the jazz dances with their wild and passionate attitudes, their unrestrained rhythms, and their direct appeal to sex. These ragtime melodies, coming straight from the jungles of Africa through the Negro, call to impulses in man that are stifled in big cities, in factory and slum and the nerve-wearing struggle of business.

—FREDERICK O'BRIEN.

LIFE'S DANCE

LIFE is a clown, hiding a million hurts. A dancing, happy clown, born with the gift of laughter. This clown came to earth, one day, and danced naked through empty lands. Civilization clothed him, but he is dancing still.

On with this dance—of life!

The first is a shadowy dance while man emerges from the dawn of prehistory to rise with reason above the brute. A dance that is light and almost unreal, like sunlight dancing in patches through a tree. We have watched children dance so.

And now a weird dance, passionate, cruel. Black puppets with arms and legs jumping fiercely in circles, bathed in moonlight, clothed in beads. The savage beat of the drum. The pat-pat of naked feet on the ground. Faster! Faster!

But the moonlight fades, and man dances to the tune of progress. We see a classic dance, stately and beautiful, while infant civilizations lift their faces to the sky. Egypt—Greece—Rome—

(Courtesy of Metropolitan Museum of Art)

Spinnet or virginet—Italian, 1500.

*The clavichord—Italy,
about 1600.*

(Courtesy of Metropolitan Museum of Art)

It does not last. The music changes. It becomes harsh, many-toned, like a hurdy-gurdy in narrow streets. And the dance is like a merry-go-round when the music stops. One does not walk when the clown called life cracks his whip.

The dance is solemn now, and one seems to hear, ever so faintly, the echo of cathedral bells. Religion, the church — It makes a difference in the steps of the dance. They seem more sure, more skillful. And there is a subtleness that is new.

But the dance is mad again, frenzied! Man is jumping now about a burning witch, screaming curses with every step. He is whirling dizzily through wars and revolutions. With hysterical freedom he is chopping off heads, destroying those who led the band with their little batons. And the clown with his cap and bells laughs.

So has the whole world been a ballroom, and we the dancers. King and beggar, prince and peasant, artist and merchant, poet and politician—all dance in endless pageant through the ages.

The Early History of Dancing.—Long ago Lucian wrote :

We are not to believe that saltation [dancing] is of modern invention, born recently, or even that our ancestors saw its beginning. Those who have spoken with truth of the origin of this art affirm that it takes its birth from the time of the creation of all things, and that it is as old as Love, the most ancient of the gods.

Pantomime was the first language of man, and pantomime is just a step removed from dancing. Undoubtedly the primitive peoples danced for pleasure, like children, as the Veddahs and many other savage races do to-day. These primitive dances would have been mere jumpings up and down, perhaps the first vague appearance of cadenced swinging. There was no music other than that in the dancer's heart.

The word dance itself is from the French *danse*, which is of obscure origin. It appears to be connected in some

way with the old High German *danson*, meaning "to stretch."

Most authorities are of the opinion that dancing as an expressive art had its inception in Egypt. There are fragments of Egyptian frescoes on exhibition in the British Museum that show dancing figures. Hieratic dances have been traced as far back as 2545 B.C.

According to the old tradition, David danced before the Ark. The Hebrews have always held the dance in high honour, and they have an imposing dance at their Feast of the Tabernacles.

In Greece dancing became a veritable language, beautiful, expressive, interpreting the sentiments and the passions. The Greeks knew it as *Nomas* or *Orchesis*, the art of expressive gesture. They danced everywhere, in the temples, the woods, the fields. Every birth, marriage, and death was the occasion for dancing. According to Plato, relatives and friends took part in the funeral dances, although professionals were engaged for the occasion.

The virginal dances of early Greece were of great simplicity and beauty. The dancers decorated themselves with oak leaves and garlands of flowers. On the famous Borghese Vase in the Louvre are some graceful dancing figures like those of early Greece. But the Vase itself dates about 350 B.C.

It is interesting to note that in early Greece military dancing formed part of the education of youth. As an art it was held in high esteem, and it seems also to have been regarded as an excellent means of moulding the body into ways of strength and suppleness.

The Romans borrowed the art of dancing from Greece, adding a new kind of pantomimic dancing. It was among the Romans that theatrical dancing had its origin. We are told that the Gaditanas, famous dancing girls of Cadiz, created a great furore among the ancient Romans.

The Religious Aspect.—In primitive life, dancing is closely connected with prayer. As a natural expression of

joy, of thankfulness for sun or shower, of gratitude for food, dancing came to be looked upon as a means to be used for the attainment of a desire. Thus sacred pageants and ceremonies, in which dancing makes a vague appearance, date back to the earliest times.

For a long time the only form of worship among the Indians was dancing, accompanied by singing and chanting. The Hopi Indians perform an extraordinary dance, with poisonous snakes held between their teeth, in appeal to the gods for rain. This is very possibly the strangest and most spectacular dance ceremony to be found in any part of the world. It would require a volume to do justice to the many religious ceremonies of the Indians in which dancing holds a conspicuous place.

The Devil Dance is one of the greatest festivals of the Lama Church (China). It takes place every spring, and its purpose is "to chase out the Spirit of Evil that hides in the land." Men and boys attired in rich costumes and wearing hideous animal masks go through the imposing steps and postures of the Devil Dance. It is purely a religious ceremony.

In India dancing is a religion. The Nautch dancers are connected with the temples in India and are known as the servants of god because they sing and dance before the idols. They dance also at banquets, weddings, and large public entertainments. These Nautch dancers are usually very graceful, and beautiful according to the standards of their people. When dancing they wear a jewel in the right nostril.

Christianity favoured religious dancing at the beginning. In the Church of St. Pancras at Rome there still exists a sort of stage, separated from the altar, on which priests and worshippers are said to have joined in dance measures led by their Bishop.

This secular dancing was extremely popular for a while, but the extremists gradually came to regard it as unsuited to the solemnity of the church. In 744 a papal decree abolished all dancing in churches and in cemeteries.

Mahomet, imitating the early Christian practice, instituted a sect of dancers known as the Dervishes. These Dervishes are religious dancers who twirl round and round with astonishing swiftness, sometimes continuing until they fall down in a swoon. This dance is said to be in honour of Menelaus who is supposed to have danced for four days to the sound of the flute and was rewarded by a divine ecstasy. (G. Vuillier.)

So did dancing find its way into the religious ceremonies of early peoples. The Indians danced to the sun and the moon, at their rising and setting. The Greeks danced to Pan, to Apollo, to Diana, to the harvest and to the vintage. The early Egyptians and Hebrews had dancing ceremonies. In old England, dances at May-time were in honour of Spring. As it found its way into religion, so did dancing find its way into the popular festivals and celebrations of the people, weaving itself eternally into the pattern of life.

Imitative Dancing.—There is a form of dancing which corresponds to the imitative magic which we studied in an earlier chapter (see p. 34). It is both ceremonious and religious in aspect.

It has been definitely established by authorities that savage peoples had definite dances for definite purposes. As in imitative magic water is poured from a treetop to make rain come, so in dancing there is a phase in which the thing desired is imitated to bring about its happening. To this type of dancing we have applied the term imitative dancing.

An old Motu-Motu man once said, "No drums are beaten uselessly, there are no dances that are merely useless." Every savage dance has its significance. It is no mere amusement, but rather a ceremony. As Robertson expresses it:

The dance [among savages] is a serious and important occupation which mingles in every occurrence of private or public life. If war is announced against an enemy, it is by a dance, expressive of the resentment which they feel. If the wrath of their gods is to be appeased, or their beneficence celebrated; if they rejoice at the birth of a child or mourn the death of a friend, they have dances appro-

priate for each of these situations. If a person is indisposed, a dance is prescribed as the most effectual means to restore him to health. If he cannot stand the fatigue, a physician or conjurer performs it in his name.

The war dance is an excellent example of this imitative, or sympathetic, dancing. The Indians believe that by imitating or pantomiming the warfare and their success, imitating also the complete destruction of their enemy, they are assured of victory. They believe that the war dance weakens the enemy through magic influence.

The war dance of the Chippewa Indians imitates the actions of surprising the enemy, tomahawking and scalping the foe, drinking his blood. In the Algonquin war dance, each man in turn brandishes his tomahawk and furiously strikes the post around which they are dancing. Each blow is supposed to weaken one of the enemy warriors. The dancers then fictitiously scalp the enemy in characteristic mimic action. The war dance of the Navajos of New Mexico is very picturesque and ceremonious. Of course, besides being a mode of inviting victory by imitating it, the war dance is also a sort of training for the actual wars.

Among the Indians in Mexico the dance has always been ceremonious, and regarded not only as a favourite amusement but as a serious occupation. Robertson says:

If an Indian came with an emblem of peace, he had to approach with a solemn dance, while the caciques [chiefs] received him in the same manner. If war was denounced against an enemy, a dance expressed their resentment.

Imitative dancing is used by savages in preparation for the hunt. In Africa, for instance, on the eve of a gorilla hunt there is a gorilla dance. The natives dance to a drum, and closely imitate all the attitudes and movements of the gorilla. Those who are to hunt imitate the act of stealing unseen upon the gorilla, capturing and killing it. All present join in the chorus, which imitates the triumphant march home.

For several days before starting on a bear hunt, the Sioux Indians used to hold their bear dance. The whole tribe joined in a song or chant to the Bear Spirit. Here again the dance imitated the capture and killing of the beast.

At one time every Mandan Indian was compelled to keep his buffalo mask in his lodge, ready to put on and wear at the Buffalo Dance whenever necessary. This mask was made of the skin and horns of the buffalo's head. Whenever a long absence of the buffalo from the prairies made meat scarce, the Mandans had a great Buffalo Dance "for the purpose of inducing the herds to change the direction of their wanderings and bend their course towards the Mandan villages." In the dance one or two of the men, dressed to imitate buffalo, are slain in pantomime, skinned, cut up and eaten.

In Vancouver there is a seal dance for which the natives, stripping naked, enter the water and imitate the manners and motions of the seal. The dancers enter the water regardless of the cold or the night, and emerge dragging their bodies along the sand as a seal does. They enter the houses and crawl about the fires, finally jumping up and dancing in mad ecstasy. The dance is partly religious, partly imitative for purposes of inviting the seal to come to the locality.

The imitative dance undoubtedly grew out of the primitive belief in imitative magic, but we are inclined to believe that the love of pantomime had something to do with it. Pantomime is a form of play, of make-believe, and it is one of man's oldest instincts. The warrior likes to play at being chief; the chief likes to play at being king; the king likes to play at being god. It is inevitable that this instinct for make-believe should have found its way into the dance, which is a free and unrestrained expression of desires.

We find this love of pantomime, of make-believe, interwoven with all manifestations of popular life in early times.

In South Australia, for instance, boys upon reaching puberty undergo the ceremony of having their front teeth knocked out. At the same time they join in what is known as the Kangaroo Dance. A kangaroo of grass is deposited at the feet of the boys who are being initiated. The actors, adults of the tribe, fit themselves with long tails of grass and set off "as a herd of kangaroos, now jumping, now basking in the sun." Two armed men follow to steal upon and spear them. This Kangaroo Dance serves two purposes: it *pretends* that the boys are present at a kangaroo hunt and thus admits them to the state of manhood; and it imitates the various stages of the hunt, thus showing the boys how it should be done.

Even in modern Europe we find instances of make-believe practised in popular ceremonies. In Servia, to mention one example, the peasants cover a girl with grass and flowers and pour water over her, in pantomimic petition for rain. This is followed by a dance in which the falling of the rain and its blessings to the earth are imitated.

DEVELOPMENT OF THE SOCIAL DANCE

It is interesting to note what famous men of other days thought of dancing. Aristotle says that the dance is valuable because it mirrors the manners and actions of the men of various periods. Homer held the dance in high esteem and mentions it as a favourite form of social entertainment. But evidently Cicero had little use for dancing of any kind, religious or social, for he says:

No man who is sober dances, unless he is out of his mind, either when alone or in any decent society; for dancing is the companion of wanton conviviality, dissoluteness and luxury.

We wonder what Cicero would say if he glimpsed our modern ballroom!

It was in Greece that dancing had its greatest development as a social amusement. In the time of Aristophanes there was dancing at all the banquets and festivities.

From the eighth book of the *Odyssey* we learn that dancing lent its charms to all the important banquets of ancient Greece. Both Socrates and Plato mention the art with apparent esteem.

As a social art, dancing existed in Egypt at least four thousand years ago. We know that dinner guests were entertained with dancing; for there are in existence Egyptian dinner scenes of 2000 B.C., showing dancing figures. Most of them are on fragments of old Egyptian frescoes which are now in the British Museum.

Dancing has existed as a social art in India for many generations. Since the earliest times it has been customary in certain sections of India to entertain callers with elaborate dancing festivities, although these dances are more or less religious in import.

Spanish dancing is of great antiquity, and has always been associated with social life. Many of the steps familiarized to us through Spanish dancing are of old Arab origin.

In Italy, Ireland, Scotland, England, Germany, France, Russia—everywhere we find the dance making its social appearance.

Development of Popular Dances.—France may be said to be the nursery of the social dance. Although the dances were born or originated in other countries, they were invariably brought to France to be nurtured and developed.

At the court of France, the origin of social dancing is associated with the rise of chivalry. This old proverb would seem to indicate that it was customary to dance after a feast or banquet: "*Après la panse, vient la danse*" (After good cheer comes dancing).

Catherine de' Medici brought to France not only new splendour in court functions, but a taste for social dancing. The taste spread and found its way into private homes. Catherine was particularly fond of the masked ball and did much to encourage its development.

In the rural districts of France there were many popular

festivals which were celebrated with feasting and dancing. These festivals came to take on the nature of neighbourhood dances, and they became extremely popular as a form of entertainment. The dancing was gay, unrestrained, wild.

But at the Court the dance was dignified and ceremonious. Masquerade dancing was in particular favour. At Versailles, under Louis XIV, ballets were organized with great magnificence of costume and of decoration. Lulli, famous composer of the period, devoted a large part of his time to composing music expressly for the dances at the court.

The dances in vogue at the court of France in the 16th century were the *pavane* and the *courante*. The *pavane* was a grave, solemn dance and was in high favour until about 1530. Louis XIV preferred the *courante*, a livelier dance. Some refer the origin of this dance to Spain, others to Padua. Because it was the popular dance at the court of Louis XIV it became well known throughout Europe. But for a long time the *pavane* was the popular dance of all Europe's princely caste.

The Minuet.—Perhaps the dance for which France is best known is the beautiful and graceful minuet. Although the minuet is not French in origin, the dance was brought to its highest point of perfection at the French court. Most people regard it as a French dance.

The minuet is of unknown origin and very antique. It came to France in 1650 and was first set to music by Lulli for Louis XIV. Beauchamps, who flourished in the reign of Louis XIV, and who is sometimes called the father of dancing masters, mentions the minuet affectionately. But it was not until the time of Louis XV that the minuet became the special court dance.

Louis XV was delighted with the minuet and he preferred it to any other dance. At first it was gay and lively, but upon being made the special dance of the court it became grave and dignified, and it was developed to a high

degree of grace and beauty. The minuet is always closely associated with chivalry, courtesy, grace.

During the reigns of Louis XV and XVI the gavotte was almost as popular as the minuet. A coquettish and

Our grandfathers danced a graceful waltz to the tune of "The Beautiful Blue Danube." Though danced now to livelier melodies, the waltz is still a ballroom favourite.

lively dance, it quickly became a favourite with the people outside of the court, and for a long time it was almost the French national dance. But it gradually disappeared, while the minuet remained and became more and more elaborate, more and more beautiful.

In Colonial days the minuet was brought to America and became a favourite here. It was danced in every ballroom, at every festive occasion in the home. To-day it is a favourite on the stage but has disappeared entirely from the ballroom.

The Waltz.—The volte, known later as the valse or waltz, is regarded by some authorities as being of French origin. Henry III is said to have danced the waltz "*à trois temps*" under the name of volte, but whether it was originated in France or borrowed from the national dance of another country is not definitely known.

The first German waltz tune is dated 1770 and is known as "*Ach! du lieber Augustin.*" It was danced for the first time at the Paris opera in 1793. In 1812 it was introduced to English ballrooms and instantly aroused a storm of protest. But in 1816 Emperor Alexander danced it at Almack's (a famous old dancing place) and it became popular.

From France, where it was developed to exquisite perfection, the waltz spread everywhere. It found its way across the ocean and ranked second to the minuet in Colonial America. As the minuet slowly faded into the background, the waltz became the most popular dance in this country, and although newer and livelier dances have replaced it, the waltz is still an old favourite.

A dance of great antiquity is the quadrille. It was brought from Normandy to England by William the Conqueror, and was slowly developed from its original simple form to a dance measure of great beauty and charm. It was popular all over Europe in the 16th and 17th centuries.

The dances of the 18th century, as we have seen, were the minuet, the gavotte, the waltz. The cotillion also was danced in the 18th century—a dance which derives its name from the short skirts worn by the ladies who danced it. It is French in origin and was at one time extremely fashionable.

At the end of the 18th century there came the spark

that set France ablaze—the Revolution. Yet the dancing went on, but it was the mad dancing of red-capped Carmagnoles to the tune of “*Ça ira*.” With bloodstained feet the liberty-crazed men and women danced around the guillotine.

The first social dance to become popular after the Revolution was the cotillion. Waltzing and galoping (a dance introduced from Hungary) were favourite also. Until about 1830 balls had been confined almost entirely to the aristocracy, but now the middle classes were beginning to

*In the shadow of the guillotine Paris danced in frenzied madness to the tune of *Ça ira*. The dress and the dance reflect the trend of the times.*

make of the dance a social institution. By 1840 the passion for dancing was general.

The Polka and Mazurka.—Authorities are agreed that the polka came originally from Bohemia. It appeared first at Vienna, then at Baden. It was adopted by society at Prague in 1835.

Cellarius, the famous dancing-master, introduced the polka to Paris. He achieved what is frequently referred to as a social *coup d'état*. He opened a school for the purpose of teaching dancing, and social dances took place at this school several evenings a week. He gave great danc-

ing fêtes, and he inaugurated artists' balls to which admission could be obtained only by means of invitation.

So popular did the polka become that it invaded the very saloons and shops. It was danced on street corners,

During the latter half of the 19th century the polka was so popular that it was danced on street corners, in private homes, at balls—everywhere.

in private homes, everywhere. Boots, frocks, hats, materials were named after the dance. Our "polka dot" is a relic of this period.

The schottische, also Bohemian in origin, was introduced to France in 1844 by Markowski, the originator. Mar-

kowski is sometimes credited with having originated the quadrille, but he merely improved it. The quadrille in its original form was introduced, as we have seen, by William the Conqueror. It was popular for a while, was forgotten, was revived during the 16th and 17th centuries, and again in the 19th century.

But Markowski is best remembered for his mazurka. This lively and graceful dance he introduced to Paris about 1840. It became popular instantly and was danced by everyone. It spread even to England, where it was fashionable for a little while.

It was at the Austrian Embassy that the famous *déjeuners dansants* were inaugurated in the 18th century. These delightful dinner dances are still a popular form of social entertaining. There is dancing between the courses and after the dinner. The popular dances at that time were the polka, mazurka, and waltz.

The Lancers, a novelty dance, is said to have been originated by Laborde in Paris in 1836. In 1850 it was introduced to England and became very fashionable there.

Concerning Jazz.—It would be fascinating to tread our way through the various countries, searching out the farthestmost corners of the globe, studying the types of dancing we find among the people. We would see the brisk jigs of Ireland and Scotland; the slow, melancholy dances of the South Seas. We would see the lively dances of Russia, and the formal dances of old England. We would see how climatic conditions and conditions within the country influenced the dance and made it slow or brisk, solemn or impassioned.

But the history of dancing is worthy of a volume in itself, and we can barely touch upon it here. We must resist the temptation to wander with fancy in faraway lands, and concern ourselves solely with dancing as it applies to the modern ballroom.

Jazz, for instance, though it belongs to a savage race on the other side of the globe, concerns us vitally—for it

is to be found in our own polished ballroom. Beneath syncopation and ragtime we catch the faint echo of tomtoms, of bare feet pat-patting against the ground, of naked bodies swaying in wild exaltation.

There is no doubt whatever that jazz comes to us direct from the jungles of Africa. The jazz rhythms quicken the blood, wake wild and primitive instincts, stir barbaric memories sleeping in our souls for ages. The band plays; we dance. Faster! Wilder! We are savages dancing in the moonlight. We are primitives throwing our spears. We are free, unrestrained. Jazz!

As O'Brien says, rag-time melodies and jazz "call to impulses in man that are stifled in big cities, in factory and slum and the nerve-wearing struggle of business." Jazz is a reaction from civilization, a stripping off of the veneer of culture and cultivation. It is a temporary freedom, "a swinging back to the old days when man, though a brute, was free."

The Negro, of course, brought jazz to America. Popular tradition has it that a Southern ducky, performing the wild dance of his native land to the clapping and chanting of his fellows, was quickly surrounded by a fascinated audience. After the dance a theatrical man approached the ducky and said:

"What kind of a dance was that, my good fellow?"

"Jes' jazz, sah—jes' jazz!" the ducky answered. And "jazz" that type of dancing has remained ever since.

There is a direct sex appeal in jazz which is found also in the dances of South Sea Islanders. The Marquesans, for instance, have a sexual dance known as the *haka*—more formal and melancholy than jazz, but with the same rhythmic motion and the same unrestrained attitudes. O'Brien tells us of the dance:

A gruesome cannibal chant followed, accompanied by the booming of the drum, and then, warmed by the liquor that fired their brains, the dancers began the *haka*, the sexual dance. Inflamed by the rum, they flung themselves into it with such abandon as I have never seen,

and I saw a *kamaaina* in Hawaii and have seen Caroline, Miri, and Mamoe, most skilled dancers of the Hawaiian Islands. With the continued passing of the cup, the *hurahura* soon became general. The men and women who had begun dancing in rows, in an organized way, now broke ranks and danced freely all over the lawn. Men sought out the women they liked, and women the men, challenging each other in frenzied and startling exposition of the ancient ways.

Origin of the Public Dance Hall.—The first public dance hall was opened in 1788 by an Englishman called Tinkson. A little rare old book describes how Tinkson raised thatched sheds near the Observatory and organized periodic balls and dances. The novelty and originality of this rustic idea drew the crowd; on occasions of dancing, the little thatched sheds were filled to capacity.

Later, when his sheds proved inadequate and his dances became more and more popular, Tinkson built a large and ostentatious hall known as the Grande Chaumière. It was the first large and public dance hall opened to the public. So popular did the idea become that scores of similar dance halls were opened. There are thousands of such halls now in existence.

The idea for the Winter Garden is said to have originated with a Frenchman by the name of Victor Bohan. M. Bohan, who died at Batignolles in 1856, was a great lover of flowers. He despised winter because the flowers died, and the great desire of his life was to build a great winter garden where flowers would bloom all year through.

And so M. Bohan built a great glass conservatory which he heated and in which flowers were able to blossom no matter how cold it might be outside. He cultivated the most exquisite and delicate flowers, and his conservatory was a place of consummate beauty.

To earn the money to keep his conservatory, M. Bohan gave concerts and masquerades in his "Winter Garden." It became very popular, and people of the better classes came regularly to the "fairy palace" to be entertained. The entertainment was invariably in the form of dancing and singing.

The Winter Garden in New York seems to be a modern interpretation of this old idea. We are able to step out of the winter into a theatre of great beauty, and be entertained with singing and dancing.

The Masquerade Ball.—The custom of masking is very old. We have already commented upon the love of make-believe, of pantomime. Associated with this, of course, is the love of "dressing up" of wearing masks and strange or beautiful costumes.

Primitive peoples disguised themselves as a protection from the evil spirits. Savages even to-day wear masks to scare away their enemies and the evil spirits that are supposed to cause all their trouble and misfortune. In imitative dances, masks are worn and the dancers disguised.

The New Caledonians, before murdering a man or committing an act of violence, always put on grotesque masks so as not to be recognized. Our burglar and highwayman wear black masks for the same reason.

In Tonga the natives change their war costume at every battle, by way of disguise. In Zanzibar parents "paint the faces of their children to look like little devils so as to preserve them from the evil eye." In many savage tribes the medicine man or the wizard—he who is supposed to have communication with the god or gods of the people—wears a terrifying mask during tribal ceremonies, to show his kinship with the god. Since gods are fearful creatures to the primitive mind, the medicine man who conveys messages from the god must, perforce, be fearful too. Thus he dons the grotesque mask.

The ancient Greeks wore masks at the feast of Bacchus, and later on the stage to represent different ages and types of characters. The Romans always used masks in their theatrical dances. One writer says, "The custom of wearing the mask had its origin in the classical theatre and formed an essential part of the ballet from the Renaissance onwards."

In the 16th century Italy used masks for comedy, and

it was during this century that masks were worn on the street. Frank A. Parsons says:

All great ladies wore masks "à la Venise" in the streets and in public places. People carried mirrors in their hands, and sometimes hung two or three about their persons, while other toilet articles were found in bags suspended from the waist.

From Italy the mask was introduced to England and took entertainment form. Catherine de' Medici was very fond of masked balls and introduced them in France. The custom of mask disguise became popular everywhere.

Coryat, the English traveller in the 17th century, records that until he went to Venice he had never seen a woman on the stage. And even in Venice most of the female parts were taken by men and there were few women in the audience. The women in the audience, he records, were courtesans, who wore masks and never permitted their features to be seen.

For generations it was customary for men to take women's parts in plays and theatrical dances, wearing masks and costumes for the purpose. Even as late as the 17th century there were no women actors. To act before an audience on a stage was regarded as degrading and immoral for a woman.

But even after women had appeared on the stage and established themselves as excellent actors, the mask remained. In 1772 Rameau's opera, "Castor and Pollux," was given in Paris. The part of Apollo was taken by Gaetano Vestris, who appeared, in accordance with the fashion of the time, in a mask with an enormous full black wig. One night Vestris was unable to perform, and Gardel, who was one of the leading dancers of the day, was asked to substitute. He agreed, on the condition that he be permitted to discard the mask and wig and appear precisely as he was. At the last minute permission was granted him, and he appeared in the character of Apollo without the customary mask. This innovation so pleased the public that the fashion of masking was doomed.

Its disappearance from the stage made mask disguise more popular than ever at social functions. The court balls during the 17th and 18th centuries were almost invariably masquerade affairs, gorgeous costumes and masks being worn by men and women alike. So popular, indeed, did the mask become that an elaborate and complicated etiquette grew up around it. For instance, in France no woman, whatever her rank, might wear a mask in the presence of a distinguished person. Men and women both were required to remove masks when bowing to royalty.

During the reign of Charles VI, Duchesse de Berri gave an elaborate ball to which the whole court was invited. This ball has since become celebrated under the name of "Ballet des Ardents." At the time the court was passionately fond of masks and of masquerading and everyone came disguised. The King came disguised as a savage, wearing a costume of tow held together by pitch. The Duke of Orleans, coming close to examine the costume, touched it with his torch and it flamed instantly into fire. The King was saved but became insane, and two of his companions, who were attired as he, caught fire and lost their lives when they attempted to save him.

Despite this, and many other similar misfortunes, like the assassination of Gustavus III, King of Sweden, at a masquerade ball in 1792, the masquerade ball flourished and became increasingly popular. To-day it is known as the costume ball and is a popular form of entertainment at New Year's and Thanksgiving. We quote from "The Book of Etiquette":

The costume ball is conducted very much on the same order as the formal ball. The invitations are issued two or three weeks before the date set for the dance. The words "Costumes of the Twelfth Century" or "Shakespearean Costumes," or whatever may be decided upon, are printed in the lower left-hand corner of usual "at home" cards.

In selecting a fancy costume, one must be careful to choose only what is *individually* becoming. It must be in perfect harmony with one's personality. A sedate, quiet young miss should not choose a Folly Costume. Nor should a jolly, vivacious young lady elect to

emulate Martha Washington. And furthermore, a character must not be merely dressed—it must be *lived*. The successful costume ball must be realistic.

And from another book on etiquette:

Vouchers or tickets of admission like those sent with invitations to assembly or public balls should be enclosed in invitations to a masquerade; it would be too easy otherwise for dishonest or other undesirable persons to gain admittance. If vouchers are not sent with the invitations, or better yet, mailed afterwards to all those who have accepted, it is necessary that the hostess receive her guests singly in a small private room and request each to unmask before her.

ETIQUETTE OF THE BALLROOM

We have by no means, in the pages preceding, made a thorough study of dancing. We have merely touched upon, in a rudimentary way, the dances with which we in this country are familiar. We have not even mentioned the fandango, the Sir Roger de Coverley, the morris dance, the cakewalk, the bolero, the hornpipe, the rigadon, the shindig—the dozens of dances that had their moment of popularity and faded for ever into oblivion.

Nor have we mentioned the barn dance, the Virginia reel, the delightful old country dances “where partners separated, by the length of high-held arms, for several steps and then joined together again.” These were the dances that were enjoyed by young and old alike, and that are even to-day popular in rural sections. They are gay, picturesque old dances and will never entirely be forgotten.

Following the period of barn and country dances, there were waltzes, two-steps, one-steps. Then came the period of the tango and maxixe, and elaborate variations of the waltz and one-step. The fox-trot replaced the tango, but now—“even the fox-trot is no more, and people totter and toddle, and jig and jazz, each according to the manner of his liking.”

The manners of the ballroom have not changed as have the dances. Although there is a greater freedom and a

lesser restraint in the modern ballroom, the old courtesies are observed and the old politenesses prevail.

The programme, or as it is more familiarly known, the "dance card," and its companion, the chaperon, have disappeared from the modern ballroom. The "dance card" is still in vogue, however, at large public balls and at college and Army and Navy dances.

"A lady never asks a gentleman to dance" the books on etiquette assure us. Why? Because in an age of mistaken chivalry the lady was simply a beautiful flower to be plucked by him who admired her fragrance and colouring best. So came the expression "wallflower," referring to those who were perhaps withered a little, or, like the daisy and marigold, unable to compete with the rose and the lily.

The dancing position introduced by the German waltz still prevails.

In guiding a lady across the polished floor to the tune of a simple waltz or a gay fox-trot, the gentleman encircles her waist halfway with his right arm, placing the palm of his hand lightly just above the waistline. With his left hand he holds her right at arm's length in the position most comfortable for both of them. His face is always turned slightly to the left, while hers usually faces front or slightly to the right. The girl should place her left arm on her partner's right arm. She must follow him and not try to lead the dance herself.

There was a time when, to enter a room correctly, was regarded as the greatest test of good breeding. Emily Post still finds it necessary to write on "How to Walk Across a Ballroom." She says:

When the late Ward McAllister classified New York society as having four hundred people who were "at ease in a ballroom," he indicated that the ballroom was the test of the best manners. He also said at a dinner—after his book was published and the country had already made New York's "Four Hundred" a theme for cartoons and jests—that among the "Four hundred who were at ease" not more than ten could gracefully cross a ballroom floor alone. If his ghost is haunting the ballrooms of our time, it is certain that the number is still further reduced. The athletic young woman of to-day strides across the ballroom floor as though she were on the

golf course; the happy-go-lucky one ambles—shoulders stooped, arms swinging, hips and head in advance of chest; others trot, others shuffle, others make a rush for it. The young girl who could walk across a room with the consummate grace of Mrs. Oldname (who as a girl of eighteen was one of Mr. McAllister's ten) would have to be very assiduously sought for.

How does Mrs. Oldname walk? One might answer by describing how Pavlova dances. Her body is perfectly balanced, she holds herself straight, and yet in nothing suggests a ramrod. She takes steps of medium length, and, like all people who move and dance well, walks from the hip, not the knee. On no account does she swing her arms, nor does she rest a hand on her hip. Nor when walking, does she wave her hands about in gesticulation.

The custom of "cutting in" originated in crowded ballrooms and somehow found its way even into polite society, where it is even to-day regarded as good form. Through this custom, established by general usage, while a dance is in progress, a young man may "cut in" and ask the lady to finish the dance with him. Although quite generally accepted here in America, it is regarded as far from polite behaviour in Europe.

Perhaps this custom of "cutting in" carries with it the merest suggestion of discourtesy [says "The Book of Etiquette"], but when we consider the informal gaiety of the ballroom, the keen and whole-hearted love of dancing, we can understand why the privilege is extended. But like many another privilege, it becomes distasteful when it is abused.

The dinner dance originated in the 18th century, being introduced by the Austrian Embassy as an excellent mode of social entertainment. At the dinner dance to-day,

the hostess issues two sets of invitations, one for those whom she wishes to invite for dinner and dance both, and one for those whom she wishes to invite to the dance only. . . . Often the hostess has a buffet supper instead of a dinner, and all guests partake of this refreshment. On a long table, decorated with flowers, are salads, sandwiches, ices, jellies, and fruits of which the guests may partake throughout the evening.

The *débutante* dance, or *début* dance as it is frequently

called, originated in savage life long ago, as we have already seen (pp. 167-168). The "coming out" of the fashionable young lady of to-day is reminiscent of the "coming out" of the savage young lady from her hut where she was confined for years.

At the *début* dance

the hostess receives and welcomes each guest. She may be assisted by several of her friends who are well-known in society. Her daughter stands beside her and is introduced to those of her mother's guests whom she has not already met. The *débutante* has her first partner selected for her by her mother. She may not dance with one man more than once on the occasion of her introduction to society. But she is expected to dance every dance, returning to receive guests during the intervals.

So does custom dictate what one must and must not do!

Originally dancing was confined to the courts and to the palaces of aristocracy. It was not until about 1840 that dancing had become at all general. After the Revolution in France the middle classes developed a passion for social dancing, and the custom of the social dance spread quickly among the masses everywhere. But because of the original courtly significance of the dance, it became customary to wear always at these social functions one's most elaborate gowns and costly jewels.

Our "Book of Etiquette" says:

Of course one wears one's most important jewels to the ball, and indulges in a headdress that is a trifle more elaborate than usual. The event is a brilliant one, and if gaudiness and ostentation are avoided, one may dress as elaborately as one pleases.

And again:

Hats are never worn to the ball. A shawl or scarf of fine lace may be thrown over the hair and shoulders.

One recalls that hats were not worn to the old court functions, but that elaborate headdresses, like those seen at fashionable balls to-day, were the vogue.

MUSIC AND MUSICAL INSTRUMENTS

Music is as old as man. It was one of the very first languages of man. To the primitive it was a spontaneous means of expression, like the dance. We can imagine him squatting under the stars, singing his happiness to the moon. Perhaps there is no music in his song—as there is no music in the howling of a dog at night—but it is song, nevertheless.

Taken in its fullest and truest sense, music is even older than man. What music is more beautiful than a tiny stream singing its way to the open sea? What music more subtle than the whisper of breezes playing in the treetops? What music more mournful than rain pit-patting on a sodden earth; more gentle than waves that lap softly against a beach?

When man came to earth he found music already here. Birds sang for him, and the sea moaned an endless dirge. His heart caught the tuneful echoes, to hold them imprisoned for ever.

We can be reasonably certain that man felt music long before he was able to express it. A sudden happiness surging through his heart and clutching at his throat. An irrepressible urge to shout and jump and sing, as children do. The miracle of a sunset behind a purple mountain; the thrill of sexual awakening; the discovery of a clear, sparkling cascade of water after a sun-parched day—all these would have brought to primitive man the feeling of music.

The first man-made music was song. There can be little doubt that the first songs ever sung were those of love and of fear. In other words, the first songs were love songs and dirges. We can see a brutish cave fellow pencilled sharply against the gray of dawn, his head thrown back, his muscles tense as he makes music of the madness that pounds through his veins. Inside a bright-eyed woman, frightened, awed. He is singing partly to impress her with the greatness of his voice, partly to keep pace with the

Delighted with the minuet, Louis XV made it the special dance of the court—and it was at court that the dance acquired its exquisite grace and beauty.

sexual excitement that pulses through him. Crude music, toneless and guttural, but bred in the heart and born of the voice. And therefore—song.

Now we cross to another corner of the world, in a latter era, and come upon a handful of savages grouped about the body of their dead chief. They are chanting "magic music," performing curious ceremonies to keep the evil spirits away. These savage chants, intended as magic to ward off the evil influences of the dead and so protect the living, were the original funeral dirges.

It is interesting to meditate upon the preponderance of love and grief songs in modern life. The primitive personality expresses itself subtly and in unexpected ways.

The love songs and dirges of primitive life developed into the folksongs with which we are even yet familiar. Then came the songs of secular life, like the carols of old England. And finally the song entered social life and took on a wholly new significance.

But we are here concerned more with music as it concerns the dance than we are with song and its development. Dancing rarely takes place without accompaniment of some sort. In savage life the accompaniment is a rude chant emphasized by the drum beat or the cymbal. In Tonga there is cracking of the fingers; in Tahiti stamping of the earth with bare feet. In New Caledonia the savages whistle, in Altuona they clap their hands. In modern life we have the piano, the violin, the orchestra.

The First Musical Instruments.—

Since Neolithic man had the bow [says Wells], he probably also had stringed instruments, for the rhythmic twanging of a bow-string seems almost inevitably to lead to that. He also had earthenware drums across which skins were stretched; perhaps also he made drums by stretching skins over hollow tree stems.

The drum is unquestionably one of the oldest man-made instruments intended to produce sound. No one knows precisely how the drum originated or when it first was used,

but drums of many different kinds have been found all over the world—relics of primitive races long forgotten.

It would appear that the drum was first intended as a means whereby the scattered members of the tribe could be called together for warfare. The boom-boom of the war drum is profound, ominous, like the roar of a jungle lion before it springs. It quickens the blood, stirs memories as old as mankind, calls to the primitive instincts. A writer who has lived long in the South Sea Islands heard the savage beat of the drums, and he says:

The air thrummed with the resonance of the drums. The sound carried one back to the days when men first tied the skins of animals about hollow tree trunks and thumped them to call the naked tribes together under the oaks of England. They made one want to be a savage, to throw a spear, to dance in the moonlight.

We can see how the drum would quickly have found its way into the magic music that primitive peoples used to charm away the evil spirits. And from that it would be just a step to the use of the drum as an accompaniment to the savage dances. The rhythmic boom of the drum inspires a rhythmic swaying and stamping and stepping—such as we know in our jazz—such as the savage knows in his dancing.

Frederick O'Brien says:

We who have become refined and diverse in our musical expression, using a dozen or scores of instruments to interpret our subtle emotions, cannot know the primitive and savage exaltation that surges through the veins when the war-drum beats. . . . It has ever been a summons to action, the call of the war-gods, the frenzy of the dance. Born of the thunder, speaking with the voice of the storm and the cataract, it rouses in man the beast with quivering nostrils and lashing tail who was part of the forest and the night.

The primitives used drums of various kinds. Some were hollow tree trunks over which animal skins had been stretched. Others were bamboo drums, long sections of the hollow reed, slit and beaten with sticks, like the drum which is used by the Marquesans to-day. Some primitive people

beat their own bodies to produce the rhythmic sound; others beat the ground.

Both the Egyptians and the Hebrews are known to have used drums in ancient times. The Egyptians were extremely fond of music, as is indicated by the paintings in their tombs, and in addition to the drum they had small bells, harps, tambourines, lyres. The Egyptian drum was small and carried in the hand. The Hebrew drum seems to have been a sort of tambourine which was beaten sometimes with the hand, sometimes with a stick.

The Chinese and Japanese have had drums since early times. The Chinese drum was always, even in antiquity, large and powerful in sound, like our bass drum. The Japanese drum was smaller, though no less powerful in sound.

Cymbals are also extremely old, having been used by the ancient Assyrians. They had cymbals that were plate-shaped, but there have also been found recently Assyrian cymbals that are distinctly cup-shaped. The ancient Egyptians used cymbals that closely resembled our own, as also the Japanese. Of course, many savage peoples knew and used cymbals.

The castanets of modern Spain were the *crotalia* of the ancient Romans. In ancient Rome, as in modern Spain, the popular dances were cadenced by the clink of castanets (Spanish, *castanuelas*). These are twin hollow portions which give out sharp resonant sounds. The Romans generally used bronze for their *crotalia*.

Reed pipes and whistles are of great antiquity. Bone whistles, belonging to the Palæolithic age are in existence. The ancient Maoris had a reed-pipe instrument which they called *vivo*. In ancient Greece the *aulos* were a class of woodwind instruments with double or single reed mouth-piece, and with conical or cylindrical bore. Most authorities regard the *aulos* as the earliest prototype of the organ. The bagpipe, which is of great antiquity, is a complex reed instrument.

Wind Instruments.—The whistle and reed pipe represent, or course, the earliest wind instruments. There must have been many variations of the reed pipe, traces of which have been lost for ever. And there certainly must have been many kinds of whistles—bone, wood and clay.

Among the remains of the old Inca civilization, destroyed by Pizarro, have been found many bone and clay flutes, and some trumpets of shells. The Incas evidently made great progress in music, for they had also bells of many different tones, some of bronze and some of pure copper. The flute was known not only to the Incas, but to the ancient Egyptians and to others.

The first horns used in music, it seems, were ram's horns. These natural hollow tubes were the pattern from which tubes of brass were later made. In time these hollow brass tubes were improved by the addition of valves, worked by keys, and so were our popular brass instruments originated.

There is an interesting story behind each instrument. The saxophone, for instance, is named for a Belgian by the name of Adolphe Sax who devoted a lifetime to the perfection of saxhorns—a new kind of wind instrument named for him. This volume is not big enough to hold the story of each instrument; but you can read here the origin of each type.

Stringed Instruments.—Tradition tells us that the first stringed instrument was a shell across which a string had been stretched to give forth sound. However true this may be, we know that stringed instruments are very old, for the Bible mentions them:

And his brother's name was Jubal; he was the father of all such as play on the harp and guitar. (Genesis IV, 21.)

The ancient Africans had many crude stringed instruments, most of them either made of or decorated with, human skulls. The Phœnicians and Egyptians both had stringed instruments, the lyre being among the best known. The harp, of course, is very old and was known and used by many of the ancients.

The Japanese are credited with having given us about a dozen stringed instruments, besides many wind and cymbal instruments. The traditions of the Japanese give to music a divine origin. They believed that the sun goddess, to show her resentment of the violence directed against her by her brother, hid in a cave and left the world in darkness. In order to lure her from the cave and give light to the world again, the gods invented music.

The first stringed instrument played with a bow, like our violin, is said to have been invented by a king of Ceylon about 5000 B.C. We do not know how true this tradition is, but we know that there are in India to this day wandering minstrels who play a strange, two-stringed instrument which they call the *rebek*. This instrument found its way to Europe about the 9th century A.D. and became popular in Italy. It was in Italy that the violin was perfected, and in the 16th century it took approximately the form we know to-day. Antonio Stradivari (1644-1737) is regarded as having been the finest violin-maker of all times.

The ukulele, a small guitar-shaped instrument, is not of Hawaiian origin as is generally supposed. A white man in Hawaii designed the instrument, using the Portuguese taro-patch violin as his model. He simply made the instrument one half the size and gave it one half as many strings as the Portuguese instrument, and the result was a twanging, tuneful sound that offered an excellent accompaniment to singing. The Hawaiians adopted the instrument and used it at their festivities, as an accompaniment to their weird songs. Travellers who saw the Hawaiians use the ukulele associated it with them, and gradually it came to be looked upon as a Hawaiian instrument. They have been using it now for more than a century.

The stringed instrument which is most familiar to all of us is the piano. The cithara, an ancient stringed instrument which has been traced back to 1700 B.C. and which was used by the Semitic races in Egypt, Assyria, Asia Minor, Greece, and Rome, is regarded by some as being

a primitive prototype of what was later to be the piano. But most authorities are of the opinion that the mediæval clavichord was the true forerunner of the piano.

The clavichord was simply a box-shaped instrument made sometimes with legs, sometimes without. It had many interesting variations. The strings of this instrument were set in vibration by a blow from a brass tangent, instead of a hammer as in the modern instrument.

After the clavichord there were the harpsichord and the spinet. The first genuine piano was built in the city of Florence, 1709, by an Italian named Bartolomeo Cristofori. He gave his instrument the name pianoforte because it could be played with either a soft or a loud tone. The word for soft in Italian is *piano*; the word for loud is *forte*. Thus by combining the two words for soft and loud, Cristofori had the name for his new instrument—pianoforte.

In 1760 the square piano was invented. In 1800 the first upright piano made its appearance. The accordion was invented in 1820 by Damian in Vienna. The accordion is a small, portable reed instrument with a keyboard, and is the smallest representative of the organ family. The barrel organ made its appearance about 1860, and for the first time in that year there appeared in the streets the spectacle of a travelling organ with children dancing after it.

In a recent article on the "Evolution of the Piano" Mr. Henry T. Finck says:

Even William Jennings Bryan could be persuaded of the truth of the evolutionary doctrine if he spent an hour or two looking at the collections of primitive and obsolete musical instruments in the Metropolitan Museum. Here are the ancestors of the instruments we now hear at home and in concert halls and some of them look as funny and "preliminary" when compared with ours as monkeys do compared with humans.

We have looked over this collection of primitive and obsolete musical instruments, and as it is impossible to tell

you about them all in a book limited to origins of the things that intimately concern us, we have selected those which seem most interesting and most closely associated with our own instruments, and have pictured them here for you to see.

CHAPTER XVI

DRESS THROUGH THE CENTURIES

More snow fell on the mountains, snow and again snow, and in the valleys it rained unceasingly. The Ice Age was coming on in earnest. . . . One frosty night when he [Carl, myth man of the Ice Age] felt he would never see another morning, as he lay naked and worn out under an ice-clad rock, he got up half delirious and made for the warm lair of a bear that he had scented near by. . . . He killed the bear and slobbered up its blood; afterwards he made a hole in its body and crept into the dead beast. He slept until the bear's carcass was cold, but did not leave the place until he had got the skin flayed off. The next night he slept under a rock with the skin on, and afterwards he always dragged it with him on his wanderings. Now he could stand the nights fairly well, and it was not long before he learned to wrap himself in the bearskin in the daytime too.

—JOHANNES V. JENSEN (in "The Long Journey")

THE HABIT OF DRESS

MAN originally came into the world fully clothed. He had all that nature ever intended him to have—a coat of coarse hair from head to feet. It was never planned that he have any other "dress" than this.

Cradled in the tropical regions of the earth, man, for the first long age of his existence, was quite comfortable in his hairy coat. But as he wandered slowly toward the poles, and the temperature became lower, his natural clothing seemed inadequate protection against the cold, the rain, the wind.

And so man stood upon the brink of a cold prehistory, and shivered. Other creatures, dressed like man in natural coats of fur or hair, shivered too. Some died of the cold, became extinct. Some migrated to warmer regions. Some grew heavier coats of hair, became hardened, acclimated, like the polar bear.

Though he was the last creature to come to earth, man was the first creature to reason. Finding himself in a cold and uncomfortable world, this thinking creature called man ripped the warm skins from lesser animals and wrapped them about his own body. Here were warmth and comfort! Here was protection from wind and rain! So man in the very earliest times acquired the habit of dress.

Many elements entered into the cultivation of dress as a custom, as we shall presently see. But principally and fundamentally dress was intended as an added protection against climatic conditions. Man found his natural coat of hair inadequate. Reason taught him to add another coat of his own making.

In the cold regions, where man wrapped himself continuously, day and night, in warm skins, the need for hair on the body gradually diminished. Instead of man's natural hairy coat becoming thicker and heavier, as is the case of animals in cold regions, it became thinner, finer. The more man wrapped himself in skins and furs, the less of a protection his own coat became. Civilization, with its custom of dress, refined the hairy coat to a thin down on the surface of the skin.

In the tropical regions the sun and the air gradually made the body of man smooth, refining the useless hair and causing it to disappear. Among these people the habit of dress assumed another form. The skin was tattooed, the body painted and mutilated, for purposes of self-adornment. This we will discuss later.

Dress, then, is a custom. In savage life it is a custom imposed by climate, by vanity—and by missionaries. In civilized life it is a custom so closely woven into the fabric of modesty and man-made standards of decency, that it is accepted as the only natural and proper state of man.

The popular notion that hairy men are strong is simply an association of hair with the great brute men who roamed the earth unclothed in primitive days. The modern man with his carefully tailored clothes, and his body

covered only with a fine down, is a comparative weakling; while the ape-like men of primitive times, unclothed except for the hair that covered their bodies, were veritable giants in strength.

What Is Modesty?—Man alone of all earthly creatures clothes himself. The bear never knows other dress than his shaggy coat. The leopard wears from birth to death his spotted mantle. The gorilla, closer to man than any other animal, finds sufficient warmth and comfort in the hairy coat provided by nature.

Though man comes into the world fully clothed, according to nature's original intentions, he takes the wool from sheep, the flax and hemp from the fields, the silk from the silkworm, and makes for himself garments of great usefulness and beauty. Why?

We have seen how climate conditions inspired man, in his ingenuity, to form the habit of dress. But what about those regions where even man's natural dress was a burden? Why did the habit of dress follow man everywhere, keeping pace with his progress through the ages, until with civilization the original order of things is reversed, dress rather than undress being regarded as the only natural and proper state of man?

Many writers advance the theory of modesty. Man, they say, clothes himself to conceal his nakedness. But we agree with M. Wiener ("Le Pérou") who says:

Clothing does not result from modesty. On the contrary, modesty appears as a result of clothing; that is to say, the clothing which conceals any part of the human body makes the nakedness of the parts which we are accustomed to see covered, appear indecent.

The element of shame does, of course, enter into dress. But the feeling of shame came comparatively late, when civilization had already reached a fairly advanced stage. We must regard it as a result, rather than a cause, of dress.

Modesty is, after all, highly conventional. The standards of modesty vary among different people. Mohammedan women, surprised in bathing, will cover their faces; Chinese

women will hide their artificially compressed feet. In Sumatra and Celebes the wild tribes regard exposure of the knee as highly immodest; in Central Asia the fingertips are concealed. Nudity is not regarded as immodest among the Tahitians and Tongans if the body is tattooed.

Tacitus relates that chastity was "a controlling virtue among the Teutons, ranking among women as bravery among men; yet all Teutons bathed in the streams together." The Japanese also bathe together, men and women, in natural hot pools. While they regard nudity with indifference, they wear loose garments to conceal the contour of the figure. It is interesting to notice by contrast that we who consider nakedness among the sexes horrifying, nevertheless emphasize the difference of form in our dress. Clothing in civilized life tends to accentuate rather than to conceal the difference between the sexes.

In his "Studies in the Psychology of Sex" Havelock Ellis cites many instances of savage or uncivilized people in various parts of the world who wear only short loincloths or aprons, yet among whom "the feeling of modesty is greatly developed." There are, indeed, some people so accustomed to nudity that when made to wear clothing for the first time, they exhibit great confusion and embarrassment. O' Brien relates, for instance:

Missionaries bewilder the savage mind by imposing their standards of the moment and calling them modesty. The African Negro, struggling to harmonize these two ideas, wore a tall silk hat and a pair of slippers as his only garments when he obeyed Livingstone's exhortations to clothe himself in the presence of white women.

According to the sacred narrative, clothing was introduced through sin. Adam and Eve partook of the forbidden fruit and

the eyes of both of them were opened, and they felt that they were naked; and they sewed fig-leaves together and made themselves aprons. (Genesis III, 7.)

Many writers, like Swedenborg, taught that in heaven all would be naked, for clothing was a punishment for the sin

of man. But others, like Erasmus, the devout theologian, taught that "angels abhor nakedness" and that in heaven men and women both would wear clothes of great richness and beauty.

So from age to age, from country to country, have the standards of dress and of modesty varied, always according with the customs of the people. It is a custom of civilized life to dress, therefore the state of undress is regarded as immodest. In matters of dress, as in all other matters concerning man, everything is relative.

Primitive Dress.—Man made himself a covering because he was cold. In regions of low temperature, therefore, the development of dress was rapid. But in the tropical latitudes the development of dress was slow, and for a long age it was interpreted only in terms of beads, shells, paint, and tattooing.

The first dress of man, in the colder regions, was the skin of some beast. We can be reasonably certain that animal skins were used for dress as early as the Palæolithic Age, for the intelligence, the reason, that enabled man to kill a beast many times his own size and strength would also have taught the value of the warm, furry skins. These skins were probably separated from the flesh with flint knives or sharpened bits of stone, and either pounded or rubbed until all adhering flesh had been removed.

And so was created man's first dress—a raw, ugly, blood-stained skin.

Neolithic man dressed chiefly in skins. But we know that he had also a rough cloth of flax, for fragments of flaxen cloth have been found with other Neolithic relics and are still in existence. Neolithic man is also credited with pins and ornaments of bronze.

According to the biblical story the first dress of man was the fig leaf. "And they sewed fig-leaves together, and made themselves aprons." But evidently this dress displeased the Lord, for the Bible tells us, "And the Lord God made unto Adam and to his wife coats of skins, and clothed them."

Superstition, like climate, exerted a powerful influence upon dress. Primitive man wore all sorts of trophies to protect and benefit him. He strung the claws and teeth of the animals he killed and wore them around his neck, partly as decoration, partly to protect him from other beasts. His body was a mystery to him, and he pampered it with his treasures—his shells and claws, his curious bits of stone, his trophies. These were the first talismans, the first "good luck" charms. The Africans and Australians, both highly superstitious, covered their bodies with talismans of every description. An African of the central regions even to-day will pick up a curiously shaped stone and wear it around his neck for years, fully confident that it protects him from harm.

The simplest of all clothing or coverings is the loincloth. It is characteristic of the warmer climates where dress developed slowly. In ancient Egypt the loincloth was a plain, short linen cloth which was wrapped around the loins and tied in front. In the early dynasties it was worn by everyone, even men of rank. Later, the men of importance wore loincloths of matting or leather, and later still the fringed girdle became the mark of distinction.

The Semites who visited Egypt wore larger loincloths, usually of coloured cloth. They were ornamented with parallel strips of the cloth, and sometimes bordered with fringe. Apparently the Semites wore close-fitting tunics, or skirts, also, for on the famous Beni-Hasan tombs (20th century B.C.) the Semites wear richly decorated cloth tunics "while the leader is arrayed in a magnificent wrapper in blue, red and white and fringed edges and a neck-ribbon to keep it in position." (*Encyclopædia Britannica*.)

The Savage Love of Ornament.

The desire for self-decoration, although a specifically human quality, is exceedingly old. There are peoples destitute of almost everything which we regard as necessities of life, but there is no people so rude as not to take pleasure in ornaments.

The ancient barbarians who inhabited the south of Europe at the same time as the reindeer and the mammoth, brought to their caves

brilliant and ornamental objects. The women of the utterly wretched Veddahs in Ceylon decorate themselves with necklaces of brass beads. The Australians, without taking the slightest pride in their appearance so far as neatness or cleanliness is concerned, are yet very vain of their own rude decorations. The Tasmanians are never eager to obtain useful articles but always wish the ornamental.

Writers who tell us of savage races never fail to impress upon us this love of ornament and decoration. To the savage mind nothing is more fascinating than a bright and colourful bauble to hang upon his body. Feathers, beads, bone, rings, flowers, anklets, bracelets, shells—all are used by savage man to adorn and decorate his body.

Among many savage races the women are strangely unadorned, while the men are laden with ornaments of every conceivable kind. The reason for this is, simply, that the men are so passionately fond of self-adornment that they monopolize all the beads and shells and decorations for themselves. Thus, for instance, among the aborigines of the New Hebrides, New Hanover, New Ireland, and Australia, the men and boys appropriate all the ornaments. But as a general rule, men and women alike are gaily decorated in savage life.

There are some savage races who leave much or all of their skin uncovered, yet delight in painting themselves with brilliant colours. This love of bright colours is one of the prime characteristics of the savage. Children, little savages that they are, love the coloured cartoons in the newspapers because the colours attract and fascinate them.

Throughout the entire Australian continent we find natives staining their naked bodies with black, red, yellow, and white paint. Red ochre is a particular favourite and is regarded as the finest and most important embellishment.

Although perfectly naked, the Australians of Botany Bay were by no means without ornaments. They painted themselves with red ochre, white clay and charcoal; the red was laid on in broad patches, the white generally in stripes or on the face in spots, often with a circle around each eye. Through the septum of the nose they wore a bone, thick as a finger and five or six inches long. Though this

was awkward and interfered with breathing, they submitted freely to the inconvenience for the sake of appearance.

Among the Guaycurus, the men paint their bodies half red and half white. In New Zealand the lips of both sexes are generally dyed blue. Many savage peoples paint the body on occasions of importance, as for instance the ancient Patagonians, who painted their bodies black whenever there was a death.

Decoration and self-adornment take many curious forms in savage life. In Eastern Central Africa there is scarcely a woman who is without her lip ring—an ugly, grotesque affair which is sometimes so enormous that the mouth can hardly be opened. Yet the larger the ring, the more handsome the woman is supposed to be!

Many tribes pierce, enlarge, and mutilate the ear lobes. Cases have been known where the ear lobes were so mutilated that they reached down almost to the shoulders. The hole is pierced in childhood and a small disc placed within it. Later a larger disc is placed in the opening, then a still larger one, until finally the hole in the ear lobe accommodates a disc as large as a saucer! Earrings are, of course, worn by savage peoples everywhere; somehow the earring appeals strongly to the savage taste. In modern life the earring is a last relic of this taste, and it is quickly vanishing.

Teeth, like the ear lobes, are subject to mutilation. In the Malay Archipelago the teeth are filed to points and blackened. Various tribes in New Guinea also file the teeth. In Australia it is customary, among various tribes, to knock out the two front teeth in the upper jaw of the boys of the tribe as soon as they reach maturity.

Nose mutilations have always been practised by savages. The Shulis bore a hole sometimes in the septum of the nose, sometimes in the underlip. The Papuans perforate the septum of the nose and insert sticks—a most fashionable decoration among these people. There are many tribes scattered throughout Australia, and some in Africa,

who pierce the septum of the nose and wear either a ring or a bone thrust through it.

There have been many other kinds of decoration and self-adornment. In some parts of the world it has been the practice to modify the human form. The most familiar form of body modification is the compressed feet of the Chinese women. The ancient Peruvians and many Indian tribes of Northwest America practised head deformation. Deforming of the head was practised to some extent also in Africa and among the Eskimo. Waist compression was widely practised in civilized Europe until twenty-five years ago.

Still another form of decoration is to suspend foreign bodies from the arms, ears, legs, neck, and other convenient parts of the body.

A savage begins by painting or tattooing himself for ornament. Then he adopts a movable appendage, which he hangs on his body, and on which he puts the ornamentation which he formerly marked more or less indelibly on his skin. In this way he is able to gratify his taste for change.

These movable appendages include ear, nose, and lip ornaments, necklaces, armlets, and wristlets, anklets, finger, and toe rings, etc.

The Custom of Tattooing.—One of the most widely practised forms of decoration is the application of extraneous matter to the body, as in tattooing. Darwin says:

Not one great country can be named from the Polar regions in the north of New Zealand in the south in which the aborigines do not tattoo themselves.

Tattooing is a form of skin decoration achieved by pricking a design into the skin with an awl or needle dipped into colouring matter. The ancient Assyrians, Britons, and Thracians practised it. Most savage races had the custom. It is still widely prevalent throughout Africa and Australia. Sometimes we find it in civilized life, as among sailors.

Many theories have been advanced as to the origin of tattooing. The word for tattoo in Egyptian is *Tattu* which means "The Eternal," and some authorities are of the opinion that the custom of tattooing was meant originally, not as a decoration, but as a means of preserving significant facts eternally. Thus a chief would have his special totem animal tattooed upon his chest as a reminder to others in this world, and to himself in the next world, that the particular animal belonged to him.

Mr. Frazer suggests that tattooing may have been originated for the purpose of placing the savage more fully under the protection of his totem. The clansman represented his totem on his body so that no matter how far from home he wandered, he was always under his totem's protection.

Among certain tribes in Africa, tattooing is done as a mark of courage in war. Frequently warriors are tattooed in order to present a more terrifying aspect before the enemy. Sometimes the tattooing has a religious significance; sometimes it is a mark of mourning. Among some savage races the tattooing has become merely a form of decoration and no particular pattern is followed; but among others each clan has a special identifying pattern. Tattooing makes it easier for savages to distinguish their own clansmen from enemies.

Tattooing can be very beautiful, especially when patterned by an expert. The process is very painful but usually endured without a murmur, for it is regarded as a mark of extreme cowardice to wince or cry in pain when being tattooed. The New Zealanders tattoo on the lips, a torture which few civilized people could endure.

The New Zealanders, incidentally, boast the most beautiful tattooing in the world. It is generally in curved or spiral lines, elaborately and artistically patterned.

To some extent, tattooing destroys the appearance of nakedness. The South Sea Islander in the familiar *pareu* has a greater appearance of nakedness than the unclothed

but tattooed New Zealander. Laird says that in West Africa the tattooing "in the absence of clothing gives a finish to the skin."

Despite all the social and "magic-religious purposes of tattooing" there can be no doubt whatever that men and women mutilated and tattooed themselves partly, if not chiefly, in order to make themselves attractive to the opposite sex. In New Guinea the women tattoo themselves solely to please the men. In some tribes no girl is considered eligible for marriage until she has been tattooed. The Makalaka girls, for instance, had to submit to horrible torture before they could marry. About four thousand stitches were made in the skin of the chest and stomach, a black fluid being rubbed into the wounds to colour the design.

Among the Abipones, a tribe of South American Indians now practically extinct, the faces, breasts, and arms of the women were covered with black figures of various designs. No woman was considered pretty or attractive without these figures on her body. They were made with sharp thorns, the tattooing paint being a mixture of ashes and blood. A painful process, but one gladly endured for the sake of beauty!

Cicatrization, which is practised by many savage peoples, is a form of scar tattooing. It is achieved by repeatedly cutting the skin in the same place so that when it finally heals a raised scar remains. The natives of Botany Bay consider these scars highly ornamental. The Australians are partial to this type of scar tattooing, employing it as a form of decoration. It conveys no idea of tribal connection, as does the patterned tattooing.

Many African tribes mark their boys with cicatrices, rubbing wood ashes in the wounds on the face and body. This causes them to swell and heal in a purple colour which is regarded as a mark of distinction. Men so marked are more attractive to the women than those whose scars are uncoloured.

In the Fijis the women make themselves attractive to the men by having wart-like spots burned along their arms and backs. The men consider these burns ornamental.

The Beginning of Fashion.—Jensen places the origin of fashion in the Ice Age. What he says is purely imaginative, of course, but we quote it here for its romantic interest, for its rare whimsies of thought:

When the women were not at their dainty arts by the fire, they wove themselves clothes, each finer and more extravagant than the last, but always in the strictest conformity with the general taste. One century it was absolutely necessary to wear nothing but a polar bear's skin which had to be open all down the front; the polar bears were almost exterminated and the women never went out, because the fashion was such a chilly one; but what were they to do? What made it indispensable to dress in this particular way was that nobody on any account might have the smallest glimpse of a woman's back. A later and more sober age found it difficult to understand that people of the olden time could be such unfortunate victims of a one-sided modesty.

Naturally the women of the icefield were always collecting things for their adornment. A necklace of wolves' teeth bored through and strung was very effective in setting off a frail creature who was only a woman. A bone stuck through the cartilage of the nose was one of those ornaments that were within the reach of all and therefore went out of fashion comparatively quickly. A great deal was thought of a fine complexion, which the women tried to achieve by treating their skin with ochre, obtained from springs on the island. This blooming tint soon spread from the face over the whole body, and here it must be said that the men caught the fashion; they too loved to smear themselves with ochre and fat till they looked like fiery red men and could be seen a long way off in their glory.

We can be no more definite concerning the origin of fashion than is Jensen. No one knows precisely how fashion was created, when it began—indeed, whether it originated with women or with men. It is a mistaken notion, as we shall presently see, that women are more vain than men.

It is difficult to believe that any sort of fashion existed as early as Jensen indicates, although we cannot, of course, be certain about it. The extreme conditions of the Ice Age

would have obviated any possibility of man, or woman, giving up a nice, warm, polar bear's skin because some other kind of skin was being worn. These early people unquestionably wore whatever warm skins they could obtain, throwing them over their shoulders in the most comfortable and convenient manner.

But fashion is intrinsically imitative, and it is possible that even when bearskins were the only dress, one tribe of people would copy another's method of wearing them. Perhaps some clever fellow conceived the notion of fastening his bearskin on the left shoulder with a thong or wooden skewer. This kept the skin from slipping down and left the right arm, the weapon arm, free for action. Instantly the people of his tribe would copy this convenient method. And as this tribe wandered here and there, meeting others, the "fashion" of wearing the bearskin in this particular way would spread.

Fashion evidences itself more clearly in ornamentation than it does in the dress intended for warmth and comfort. For instance, even among savages closely associated there were various kinds of body mutilation, various methods of wearing trophies and adornments. One tribe had the "fashion" of wearing a bone thrust through the cartilage of the nose; another had this "fashion" of piercing the nose but wearing sticks through it instead of bone. And still another tribe, in the same vicinity, spared the nose but had the "fashion" of mutilating the ear lobes by piercing them and gradually enlarging the holes with discs. Each tribe in early life appears to have had some mode of body adornment peculiar to itself. Even in tattooing, a fairly general custom, there were various tribal fashions. We are inclined to regard this as the first crude manifestation of fashion.

The Development.—Only yesterday dress was a covering, a protection, with no apparent beauty. When "Adam dived and Eve span" the fig leaf vied with the more modest skin, but still fashion was undeveloped.

To-day Fifth Avenue is heralding a new season. The shop windows are showing gowns from Lanvin and Poiret. Brilliant colours flash in the sun. Graceful women, faultlessly gowned, brush by in a rustle of silks and satins. Laces stir and jewels tremble. A limousine draws up to the curb and a buckled slipper finds the running board. One catches ever so faintly the breath of a perfume from the Orient.

The development of dress from the first raw skin to the silks and sables of Fifth Avenue is one of the most fascinating phases in the study of man. Like some inseparable shadow, fashion has kept pace with man through the long ages of his development. To study dress and fashion, therefore, is to study man, for the one parallels the other.

Long years have rolled between the woman who sat huddled in the prehistoric cave and the strutting mannequin who symbolizes our own complex civilization [writes Katherine M. Kelly]. The art of dressing the woman has developed with her own development through the centuries. . . . Each generation from the earliest time has contributed something to this art.

It is a common notion that women are by nature vainer than men, and "more addicted to dressing and decorating themselves." This certainly does not hold true among savage peoples in general. Among the Uaupes the men and boys appropriate all ornaments for themselves. In New Hebrides and various parts of Australia the men alone wear body adornments. There are several African tribes in which tattooing as a form of body adornment is confined solely to the men.

A prominent New York photographer, who prefers to have his name remain a secret, says that men sitters are invariably more vain than women. "The woman who comes to be photographed," he said to the author recently, "seems to realize her shortcomings. If she is stout she asks to be placed in the position that would make her appear most slender. She has a wave put in her hair, and uses rouge to make her lips prettier. That is not vanity,

as I see it. She is merely trying to make the most of her personal appearance. She wants the photograph to be flattering.

"The man, on the other hand, resents any advice or suggestions. He wants to appear in the photograph precisely as he is in life. He is indignant if it is suggested that a bit of rouge be applied to the lips for photographic purposes. The truer the likeness to himself the more he is pleased. In other words, he is satisfied and vain; his appearance pleases him and he will not make any attempt to improve it."

However true this may be, it seems certain that men and women both have an equal share of vanity. The man may not be more vain than the woman, but it is doubtful that he is any less vain. Why, then, does woman give so much more thought and attention to matters of dress than the man? Why is woman's dress so very much more elaborate than man's?

The general belief is that women adorn themselves to attract the opposite sex. This is true, but only in a very limited sense. Many fashions are ridiculed by men, yet women persist in wearing them. And women continue to adorn themselves long after they have won the men of their desires.

Arnold Bennett says:

The truth is that the competition among women for men is chiefly a legend—not wholly. There are more women than men, but not many more. Women want marriage more than men want marriage, but not much more. Competition is by no means so fierce that women have to perform prodigies of self-ornamentation in order to inveigle a fellow-creature so simple that he worries about the tint of his own necktie and socks; and the idea of such a phenomenon is derogatory to women. After all, nature has the business of sex-attraction in hand, and she is not dependent on fashions. Long before fashions had been evolved she managed it precisely as well as she manages it to-day. She relies not on textile stuffs, but upon the stuff that dreams are made of.

Another general belief, fostered by the masculine world,

is that women are like sheep who follow one another, slaves to fashion. Which is absolutely untrue as can readily be proved. But let us quote from Arnold Bennett again, for his is a *man's* opinion:

This argument is more than insincere; it is impudent. For women show much wider originality and variations in attire among themselves than men do among themselves. Half a dozen average well-dressed women will be as different from one another as half a dozen flowers of different species; you could distinguish them half a mile off. But half a dozen well-dressed men would be indistinguishably alike if you decapitated them. It is notorious that men are the slaves of fashion. . . . They have a perfect passion for being exactly like other men—not merely in clothes, but in everything. So much so that they cannot bear to think that there are men unlike themselves.

We are all familiar with this state of affairs, if we will only recognize it. The man is the slave of fashion, not the woman. Let one man dare to dress a little differently, a little more daintily than his fellows, and he is immediately dubbed a "sissy." Let him take a trifle more care of his personal appearance than men usually do, and he is labelled a "dude." It is the men who are like sheep, slavishly following the fashion of dress that has been originated for them. How the present mode of masculine attire was originated we shall presently see.

The women of to-day give more care and attention to their dress, and wear more elaborate garments than men, because it is the long-established custom for them to do so. They are expected to wear attractive clothes. In bird life and animal life it is the male who wears the gayest feathers, the brightest coat. We shall see why this has been reversed in human life.

Why Women Dress More Elaborately Than Men.—In the earliest times, men monopolized all ornaments. The prettiest shells, the sharpest sabre teeth, the most highly polished stones belonged to them. They plastered their hair with mud and weighted their bodies with trophies and decorations.

The chief and the medicine man were particularly resplendent in their ornaments and decorations. They were painted and greased; they wore skulls and image idols; their heads ached with the weight of the ornaments they carried. They even made for themselves bracelets of the human hair cut from war victims.

When man became a hunter and a clansman, giving up the life of the nomad to become the head of a family, he found that many decorations and body adornments were a hindrance to him. He could not steal upon an animal silently when his body was laden with bracelets and shells and other cumbersome ornaments. He could not climb a tree as quickly, could not fight as easily.

Warriors, too, found the ornaments a hindrance. They could swing the stone ax and wield the great spear much more easily when their bodies were free from heavy ornaments. They gave up everything except the trophy—the “good-luck charm”—which they believed would protect them on the battlefield.

And so the dress of man became simpler and simpler as man developed and found new duties, new responsibilities. Only the dress of the chief and the medicine man—both of whom remained at a safe distance on the battlefield, and who led but had little participation in the hunt—continued to be highly elaborate and ornamental, a hindrance to every movement.

Yet man retained all his innate love of ornamentation and display, and in savage life there are always festivities in which the men wear grotesque masks or paint themselves in gay colours, festivities in which the men have an orgy of body decoration to satisfy the hunger for display. Many African and Australian tribes have such festivities. We find them also in China and Japan. American and Mexican Indians have the custom. It prevails, in a modified form, even in civilized life, the masquerade ball being the most familiar example.

It was when man began to find elaborate dress and

Ancient iron needles unearthed in Egypt.

decoration a hindrance that he forced woman to decorate herself, for *his pleasure*. Since he could not very well wear with ease the shells he brought from the sea, the stones he polished until they shone like gems, the little images he carved from bone and wood, the woman was obliged to wear them for him.

And woman was nothing loath to pamper her body. She found it a pleasant diversion to sit by the fire and string teeth on a cord-like fibre to wear around her neck. She liked to make ornaments that she knew would delight her master, and perhaps make the other women a little envious. She had leisure while the man was away on the hunt to make things for herself, and she began to enjoy the occupation.

Thus while man hunted and fished and warred with his neighbours, woman sat before the fire and kept the food in readiness for his return; and while the food cooked to softness in the big iron pot, she made new things for herself to wear. She must look attractive when the man returned. She must please him. She learned to adorn herself for his pleasure rather than her own. But habit quickly become custom, and custom is usually pleasant. Woman gradually began to dress for her own pleasure, as she still does to a very great extent.

It would seem, then, strangely enough, that woman adorned herself originally because of man's vanity rather than her own. The more ornaments, the rarer shells and beads she wore, the wealthier the man. As Bennett says, "Man employed the lady to be expensive in his behalf." He advances the theory that the fashionable Chinese male kept his fingernails so long that the hands could not be used, and maimed the feet of his females so that they could not walk, for the purpose of publicly demonstrating that he was wealthy and had plenty of servants to do all necessary work.

As we trace the development of dress through the ages we find almost everywhere the tendency to make the

woman look "expensive." Nevertheless, we find also a tendency for the man to dress elaborately and display his wealth whenever leisure gives him the chance to do so.

In savage life, for instance, it is the chief and the medicine man who dress in rich skins and gaudy decorations, while the huntsmen and the warriors wear little or nothing. In civilized life, the king and his courtiers, the noblemen and their associates, always wore silks, satins, and velvets every whit as elaborate as those worn by their ladies, while the men who worked in the fields and on the roads wore only what was absolutely plain and comfortable.

Story of Man's Dress.—In cold regions, man's clothing began with the animal skin. In warm regions it began with the loincloth.

The loincloth in ancient Egypt, as we have seen, was simply a short linen cloth which was wrapped around the loins and tied. Later it was made of matting, and sometimes of leather. During one period it took the form of a narrow fringed girdle.

The loincloth of Egypt developed into a skirt which fell below the knee—possibly inspired by the close-fitting tunics worn by the Semites of this period (20th century B.C.). In Babylonia there was a similar tunic, or skirt, covering the lower half of the body.

The costume changed perceptibly during the XVIIIth and XIXth dynasties. Now we find the Egyptians covering the upper part of the body with a tunic fastening over a girdle. The fashionable material is linen. But again the fashion changes, and again—many times in quick succession. Evidently the Egyptians copied from everyone who visited them. By the time of Herodotus woollen mantles trimmed with fringe were being worn by the men. And those of high rank wore finer materials and mantles of a different cut to distinguish them from the slaves.

In Greece, man wore a loose-girdled mantle like the chiton worn by the woman. Usually it was short but musicians and charioteers wore long, trailing garments

which were drawn up in front through a girdle to permit them to walk.

The Roman costume of the classic period was the toga. This was simply a piece of cloth in the form of a segment of a circle. One end was thrown over the left shoulder and allowed to hang down in front. The remainder was drawn around the body. Ordinary citizens or plebs wore the plain white toga. People of rank or patricians wore one entirely of purple, or with a purple border, and on

occasions of importance added a gold-embroidered tunic. A long robe was usually worn over the toga at dinner parties.

In early Britain the men wore tunics which opened at the side and fell to the knees. The tunics had sleeves which were generally loose above the elbow and tight-fitting below. With the tunic dark hose was worn, or breeches which were cross-banded below the knee. This type of costume appears to have prevailed from the 2d or 3d century A.D. until the 8th century.

The year 785 marked an era of great splendour in men's

attire among the Anglo-Saxons. The Council of Cloveshoe found it necessary to denounce the extravagance of the people in general, the clergy in particular. But according to all accounts, the Danish dandies of this era completely eclipsed the Saxons. The men of rank wore rich and elaborate clothes and were fond of jewels and decorations.

The Norman Conquest marked no great change in English costume, except that a French influence was introduced. A general luxury prevailed among men and women alike.

At the end of the eleventh century began the Crusades, and men began to see life from another angle, began to make new associations, see new phases of life. The Crusaders acquired a new appreciation of art and beauty, and they brought back with them cloths of rich, gorgeous patterns, precious jewels, ornaments and garments of great beauty. The 12th century saw a rapid development in dress and in the manufacture of materials.

Though costume was elaborate and beautiful during the 12th century the workmen were obliged, as always, to wear what was comfortable and convenient. The usual costume for those employed in daily labour was a simple tunic with close sleeves and a hat with a brim. The men of rank wore gorgeous tunics of silks, elaborated with jewels and ornaments.

Writing of mediæval Europe, Parsons says:

During the reign of Philippe (Philip II, 1180–1223) tournaments were often given. Not only were the guests of noble origin, but there were crowds of troubadours with their instruments, minstrels, fools, jugglers, dancers, and other strange and amusing people. Booths and tents were raised around the castle gate and merchants of all sorts hastened thither with their wares of cloth-of-gold and silver, velvets and silks, stuffs of all kinds, ermine and other furs, silver cups, gold clasps, ornaments of great variety for lords and ladies, cutlery, armour, and embroidered articles of personal adornment, as well as trifles for amusement. Flags, banners, pennants, and lovely tapestries hung and fluttered from the windows and balconies of the *châteaux*. These tournaments persisted, growing in number and gorgeous sumptuousness throughout the twelfth and thirteenth centuries.

There was great elaboration of dress in the 13th century. Nobles were regally clothed in silk tunics trimmed with gold, stockings and sandals, and embroidered gloves with jewelled backs. They curled their hair with irons and bound them in ribbons.

The size of the cloak and robe, breadth of the trimming, and the number of stuffs each person was permitted to possess were regulated by law. The higher the rank, the greater the variety allowed, the larger the cloak and robe, and the broader their trimmings. Hoods were universal, but their size and shape was not left to the caprice

of their owners. The nobles wore large hoods hanging to their heels, the common people little sugar-loafed cowls.

During the 14th century the custom of wearing long hose, drawn up the legs to join a short breech, became popular. The hood and robe of the previous century disappeared and men began to wear short, tight-fitting jackets. Dress became more practical than it had been before, and for the first time fashion began to change very distinctly from season to season. Sleeves, skirts, and head-dresses ran through various interesting fashions. Belts and buttons came into general use.

It was during this period that a new soul was being born in Italy—a soul which was to make its influence felt throughout Europe. We refer to the great Renaissance which was born, nurtured, and developed in Italy, and which found its way into France and England, leaving in its wake a new appreciation of the classic ideals. Social, political, and religious life responded to the new influence. And of course dress reflected the change.

Parsons says:

By 1400 the hour of mediæval life had struck, and consequently of mediæval art. Its shadow lingered for near a century in the west, but the expression was abnormal, for it was insincere. The spirit was dead and the body, robbed of its soul, refused to function and began slowly to crumble away.

During the 15th century costume was simple in line but rich and luxurious in materials. We find both an ecclesiastic and a classic influence, with memories of a mediæval idealism. There seems also to be a new feeling, a decorative effect wholly lacking before. Toward the middle of the century one senses an Eastern influence in turban-like head-dresses worn by the men and women.

Parsons tells us that at this time in England "the male sex appears to have been first to show pride in brilliant plumage and to have succeeded in exploiting it." And France, he tells us, "was true to form and sought to convey the impression of decorative appearance whatever the conditions might be under the surface."

In England in the 16th century the men of the court and nobility were great dandies. Sir Walter Raleigh wore a corset, as did all fashionable noblemen. Velvet caps and plumes were worn, doublets of satin, coats of cloth-of-gold or silver, trimmed with ermine. Jewels were hung about the neck and monstrous ruffs, introduced by Queen Elizabeth, were worn. In France the same ostentation in costume prevailed. But in Italy the costume of the men was simpler, carrying still a suggestion of the dignity and classic influence of the Renaissance.

The 17th century saw a return to simplicity after the gorgeous artificiality of the Elizabethan times. With the accession of James I, dress took on a saner note. We see a new interest in line, and in men's costume a tendency to follow the lines of the figure. The dandy is beginning to flourish, and there is a vague suggestion of the uniform which is to become later man's general attire.

In this century the ruff disappeared, giving way to wide, flat collars, laces, and ribbons. The doublet, ancestor of the coat, became longer; the breeches became smaller and were fastened below the knee. Charles I introduced the Vandyke beard, and it was during his reign that the fashionable noblemen wore the notorious "love-locks" and roses in their ears.

The magnificent court of Louis XIV introduced many new and striking style notes, all of them as capricious as the King himself, and lasting but a moment. It was during Louis's long reign that the mode in France reached the climax of its richness and splendour, influencing all the rest of Europe. One of the important fashions of the period was the petticoat breeches, strangely effeminate with their cascades of lace and ribbon below the knee. Louis XIV also began the custom of wearing curled wigs, and he is reputed to have had forty wigs for his own use.

The dandyism which began to manifest itself in the 17th century became paramount with the beginning of the 18th century. In France, Louis XV followed, or tried to follow, the pace set by his magnificent predecessor. Fashions were introduced, had a moment of popularity, and gave way to something new again. In two years the fashion for hats changed about twenty times. One week there was a mania for Greek robes; the next week a rural peasant idea was adopted by everyone at Versailles. Great luxury prevailed. Then, in 1789 came the crash and "each step of the Revolution was followed by its own peculiar response in fashion which expressed the dominant idea of the particular part of the convulsion which it represented."

The young Englishman of the 18th century tried to emulate the French dandy, with little success. He succeeded only in making himself ludicrous, the butt of the wits and satirists. We quote from "The History of English Costume":

Everywhere the beaux. He rides the world like a cockhorse or like Og the giant rode the Ark of Noah steering it with his feet, getting his washing for nothing and his meals passed up to him out of the chimney. Here the beaux, the everlasting beaux in gold lace, wide cuffs, full skirts, swinging cane, a scarf of flashing colour, the coats embroidered with flowers and butterflies, the cuffs a mass of fine sewing, the three cornered hats cocked at a jaunty angle, the stockings rolled above the knees, lacquer hilted swords, paste buckles, gold and silver snuffboxes flashing in the sun.

But the "beaux" passed and toward the end of the century a new dignity entered English dress. There were still fops, however, who carried muffs in winter, wore velvet bows and lace cravats, and were never without their snuffboxes. Toward the close of the century there stepped upon the stage of fashion the master dandy of all times, the man whose influence is most strongly felt in modern dress.

Beau Brummell.—Throughout the 18th and 19th centuries, there were many dandies who flourished for a moment and were forgotten, but Brummell remained the "sublime dandy" of all time.

He was born George Bryan Brummell. He is said to have been of low birth and with no wealth other than his astonishing personality. His manner gained him wide popularity, and at Eton and Oxford he won many influential friends. He entered society as a young man and was instantly accepted.

Brummell had a wonderful personality. He was witty and charming; there was a magnetism about him that few could resist. And he had the most amazing insolence one can imagine. Roger Boutet de Monvel has written an excellent work on "Beau Brummell and His Times." In it he relates that on one occasion Brummell ordered a duchess to leave the ball backward, because her back offended his

Portrait-drawing of Beau Brummell, master dandy of the early 19th Century. His influence is expressed in the present mode of dress for men.

tastes! At the theatre, when he wanted to speak to a lord or a lady he would simply beckon, and they would come to him instantly.

Unlike most of his contemporaries, Brummell had exquisite taste. He frequented the best clubs, the most exclusive homes, the most fashionable amusement places, and he became a connoisseur of good living. He decided to dress not as others did, but as he himself saw fit.

And so Brummell, in the limelight, began a new era in dress. He changed the prevailing fashions to suit himself, without fear of criticism. He wore his hair short and without powder. He avoided bright colours and appeared almost invariably in black or dark blue. He distinguished himself not by gay colours or elaborate jewels, but by the superb fit of his garments, the meticulous neatness of his attire.

Eventually Brummell, now known as Beau Brummell, the best-dressed man in London, selected one definite style of dress to which he adhered. He wore a dark blue or black coat, a buff-coloured waistcoat, and black, close-fitting trousers. With this costume he wore light pumps or lace boots, according to whether he was going to a ball or merely taking a walk. His manner was perfect, his bearing was delightful. Others emulated this distinguished-looking man, and soon it became the custom for men to wear inconspicuous but well-fitting clothes. The modern dress coat originated with Brummell, as well as the idea of a uniform type of dress for men.

With all his exquisite taste and perfect manner, Brummell was conceited. He devoted three and four hours to his toilet in the morning, sometimes deliberating for an hour before selecting his cravat. On one occasion a young man, fascinated by the brilliance of Brummell's boots, inquired the manner of keeping them so and begged the recipe for his own use. "Blacking, my dear sir?" said Brummell. "Well, you know, for blacking I never use anything but the froth of champagne!"

After a life of great influence and power, Brummell died in an insane asylum—in poverty and without friends. The story of his life is fascinating and well worth reading.

Colonial Costume.—What was happening in America all this while? Let us see how men were dressing here, what they were wearing, what fashions they were following.

The Southern colonists were in constant communication with England and followed closely the ideals, customs, and practices of the mother country. Their fashions came from England, as well as the materials with which to interpret those fashions. The early Southern colonists, therefore, were wearing practically the same type of dress as was being worn in England of the corresponding period.

The Northern colonists followed some of the fashions of England, but adopted also new ones of their own. The Dutch settlers made their influence felt in large flat collars, bright kerchiefs, and small caps. With the coming of a national consciousness, fashions changed and the new influence made itself definitely felt.

The presence of French officers inspired the colonists to emulate to some extent the fashions prevalent at the court of Versailles. By the time George Washington was being inaugurated as the first president of the United States, the dress of men and women was an interesting combination of French, English, and Colonial ideals.

Great stress was laid on the cleanliness and attention which was paid to details of dress, by all foreign visitors, while the unheard of neatness of American women was the subject of much discussion abroad.

In 1784 John Adams was sent to London as the first ambassador from the United States to the court of St. James. Writing at this period his wife says:

I am not a little surprised to find dress, unless on public occasions, so little regarded here. The gentlemen are very plainly dressed, the ladies much less so than us.

The 19th century ushered in many curious and ugly

fashions in women's dress, but the tendency to dress simply and in good taste, like the Londoners under the influence of Beau Brummell, prevailed among men. While women worried about "mutton-leg" sleeves, wasp waists, towering headdress, bustles, and the absurdities of the Victorian Era, men were learning to enjoy simpler and more dignified dress than any to which they had previously been accustomed. It is curious to note that while woman's dress became more elaborate, man's dress became simpler. While woman's dress became more cumbersome, more uncomfortable, man's dress became more comfortable and convenient than ever before.

We have studied man's dress in its development because it represents more clearly the periodic changes to which fashion has been subjected. Woman's dress changed with every season, sometimes several times within one season. While man's costume for a generation, or for the period of a king's life, represented some definite influence, woman's costume borrowed from the whims and fancies of other countries and changed incessantly. Therefore, the study of man's dress is of interest to the historian; the study of woman's dress is of interest to the costume designer, the fashion artist.

The more pronounced style notes in woman's dress during the most prolific periods of fashion development are shown in the Parade of the Dolls. (See pp. 540). These dolls, dressed in accurate reproductions of historic costume, have been photographed and permission to use them in this book has been given by the Metropolitan Museum of Art.

How Fashions Are Made.—During its development through the ages, dress has submitted to various external influences. Architecture, sculpture, the stage, climate, wars—all have left their mark on dress and on the creation of fashions.

Climate influenced fashion to a great extent during the formative periods. In ancient Egypt, for instance, dress was designed to be cool, simple, and comfortable. The

wealthy women wore costly, veil-like draperies which were a protection against gnats and flies but had no warmth. Women slaves wore coarse cotton garments, and slave girls trained as dancers wore nothing at all.

In the South Sea Islands and other tropical regions natives went unclothed as nature intended. Missionaries, visiting these islands, forced clothes upon the natives, with disastrous results. Unaccustomed for ages to be without covering, these uncivilized people lost their resistance through dress and became subject to pneumonia and other fatal diseases. As O'Brien points out, the natives of the South Sea Islands are not the tall, straight, strong specimens of humanity the white men found when they visited the Islands for the first time, but weakened men and women striving to understand the standards of civilization which have been imposed upon them.

Civilization, accepting dress as the natural state and undress as the improper and unnatural state, devised special clothes for winter and special clothes for summer. This idea appears to have originated with late Neolithic man, who wore his bear skin when the weather was cold but made himself coverings of a flaxen cloth when the weather became warmer. In civilized life, wherever there is winter and summer there are also winter dress and summer dress.

But besides inspiring two types of dress, climatic conditions have originated many little peculiarities of style which we still retain. The V-shaped nick on the lapel of the coat, for instance, takes us back to the time when a collar was needed for protection against the bad weather, and the nick was made so that the collar could more easily be turned up around the neck. Modern tailors retain this nick and it is seen on all coats of the present day, although cut frequently in a manner that would quite prevent its earlier use.

Among the marauding nomads of the western Sahara, called by the Arabs the *Tawarek* (God Forsaken), every man wears a cloth across his face. It is never removed.

Originally these cloths were worn to protect the face from the driving sand and the glare of the desert. But so ingrained has become the habit or custom of wearing the "litham," as it is called, that a *Tawarek* will not show his face even to a member of his own family, regarding it the height of immodesty to do so. In this manner are fashions made.

The ancient Egyptians had the custom of wearing a band around the head, when travelling, to keep the hair in place. This custom created the fashion for wearing a band around the head, and to-day we retain the fashion but place the band on the outside of the hat instead of around the head. All men's hats have this band. The streamers around the crown of a child's hat is a remnant of an old Greek custom. To protect the head from the sun the Greeks wore a flat, broad-brimmed hat which had long streamers. When the sun was strong, the streamers were tied under the chin to hold the hat in place. When there was no sun and the hat was burdensome on the head, the streamers were loosened and the hat permitted to hang down the back, in the manner of our sunbonnet.

Of course, fashion is largely imitative. There are two distinct reasons for imitation in matters of dress. The first is a desire to be like everyone else, to avoid being thought strange or queer by one's fellows. The second is a desire to assert quality with the others, to show them that one is able to have the things they have. Then, too, imitation may be prompted by a reverence for the person or persons imitated.

The story is told of a Fijian chief who was on one occasion going over a mountain path followed by a long string of his people. He stumbled and fell. Instantly all his people fell down upon the ground, except one man at the end of the procession. The others set upon this man at once. Did he consider himself better than the chief? Had he no reverence for the great chief who led the procession?

A story, similar in idea, is told of Duke Philip of Bur-

gundy who, in 1461, suffered a severe illness during which his hair was completely shorn. More than five hundred nobles of the time sacrificed their hair that the Duke might not feel conspicuous. What was a necessity with the Duke became a fashion among the nobles.

We are told that in 1775

the queen [Marie Antoinette of France] adopted a chestnut brown colour for her gown. This colour pleased the king and it is written that every lady in court had on a dress of that colour the following day.

There has always been quick aping of the clothes and manners of favourites. Madame du Barry, the inimitable Ninon de Lenclos, Nell Gwynn, the orange girl of Drury Lane, Mme. de Montespan, the magnificent Pompadour—all the long list of historic beauties in whose boudoirs plots were hatched, in whose perfumed palms kingdoms rested—swayed for a moment the pendulum of fashion according to their own whims and tastes. And among the men there were fashion satellites, too—Louis XIV, Beau Brummell, Napoleon.

Beau Brummell appeared one morning, about a hundred years ago, in tight-fitting black trousers which a contemporary describes as "shocking." Yet instantly the London smart set adopted Brummell's fashion, and pretty soon everyone was wearing the tight-fitting black trousers. But knee breeches were not given up without a struggle. It is said that the Duke of Wellington was refused admission to a ball because he presented himself in these long, tight trousers introduced by the dandy of the age.

Many fashions were created by law. There is, for instance, a distinct order or edict concerning the shape of pocket handkerchiefs. It is dated June 2, 1785, and was issued by Louis XVI, supposedly at the request of Marie Antoinette. Up to her time, it would appear, handkerchiefs had been of all sizes and shapes. Some had been oblong, some round, some triangular, some square. The Queen believed that if the square form only were used

the handkerchief would be very much more convenient. Consequently it was decreed that, "The length of handkerchiefs shall equal their width, throughout my entire kingdom." Handkerchiefs have remained square since that day, and what the edict in 1785 made the fashion then is still the fashion with us.

Parsons says:

The Queen, Catherine de' Medici, was always partial to crimson, particularly to crimson velvet. This colour became so universally admired that a law was passed forbidding any woman not a princess to wear a gown wholly of crimson. No man might wear more than one article of dress of this colour. . . . The bourgeoisie rebelled at the magnificence of the court, and the lord gave them permission to wear gold bands on their heads with jewelled belts and necklaces of gold. They were apparently appeased, for a year later we find the lower classes clamouring to be allowed to wear the same, including lace and silk petticoats. This was refused them but they were instead given leave to edge their robes with lace and to participate otherwise in the orgy of "being fashionable."

In Puritan New England, in the 17th century, the size of one's fortune, and the amount contributed to the church, determined the material of which one's clothes might be made. Laws were passed concerning the kind and amount of lace permitted individuals in decoration. History abounds with rules and regulations concerning fashion, and it would be tiresome to mention even a small part of them.

There have been times when the court was the birthplace of fashion, and the bourgeoisie feverishly imitated every little whim and fancy. During the seventy-five years of Louis XIV's reign, for instance, all that was new and fashionable originated at Versailles, quickly seeped through the cities and became the fashion of the bourgeoisie. And the lower classes imitated, as far as they were able, these copied fashions of the bourgeoisie.

But there have been reversals, as during the era of Louis XV when, for novelty, the court adopted the rural peasant idea in dress. There was recently in America a wave of peasant idealism when every shop displayed gowns and blouses and even underthings of peasant inspiration.

We who have lived through the great World War know the influence of war and political upheavals upon fashion and dress. Every war of history has had some influence upon the dress of the masses. The war with which we are acquainted by virtue of having lived through it brought a tendency to wear simple, inconspicuous garments—*while the war was in progress*; but the moment armistice was declared there was a great reaction and the pendulum swung to the other extreme. For a period of two years extreme fashions were the vogue, only the brightest and most vivid colours were popular, and every week saw a new fad or fancy.

The French Revolution, and the period of the *Directoire* following close upon it, exerted a powerful influence upon fashion. Play-life in France suddenly ceased, and the cloud of the guillotine hung over the gay gardens and palaces where nobility idled in silks, satins, and velvets. The crash came—and the day belonged to the people. Laces and jewels were replaced by bloodstained cloths. Luxury in dress was changed to eloquent simplicity. The hair was cut short. Comfort and freedom was the keynote of dress rather than richness and decoration.

Writing of the period, Parsons says:

To annihilate not only the old monarchic ideas and practices, but every vestige of its externalized forms, was the aim of this period, and in no other one is a clearer psychological response of materials to the power of ideas traceable than in that of the French Revolution. Fashion responded as readily and as completely to human desires and instincts as they expressed themselves in this period, as they had in any other, and strange and wonderful were some of the things she did.

The influences which have been moulding and shaping fashion through the ages are many and varied. A sudden wave of "daring," a brief reversal to classic dignity, a season of mediæval gaudiness and display, a year of great extremes and then again a year of great simplicity—definite external influences inspire such fashions. Sometimes it is the aftermath of a war; sometimes the influence of a pow-

erful national character. Sometimes it is the plan of a crafty costumer, for purposes of commercial gain, sometimes the whim of a prima donna or the famous actress. The stage has always swayed the mode.

This story of the origin of a single fashion during the times of Louis XIV reveals the gay bubble that fashion is, permitting itself to be wafted here and there by every passing breath of fancy—a bright and beautiful bubble but short-lived like those that children blow from clay pipes:

An amusing instance of the derivation of a single fashion is given in the description of a hunting party at which the king and one of his mistresses, the Duchesse de Fontanges, were present. A sudden gust of wind blew aside her elaborate headdress. She immediately tied it in place with her garters, allowing the ribbon ends to fall over her forehead. The king was delighted with this device and the court is said to have adopted the fashion immediately, as did the entire bourgeoisie, naming it "*coiffure à la Fontanges*." This fashion was taken up by the gentry in England also, and it persisted there for some time under its French name.¹

Ancient and mediæval dress have a distinct influence upon modern fashions, as was clearly indicated during the recent excavations in Egypt. A West End court dress-maker is quoted as having remarked:

Every well-dressed woman will be wearing evening gowns designed after the ancient Egyptian models. Lord Carnarvon's discoveries in Egypt have had a tremendous effect upon the styles which will be in vogue next season, and already we have been flooded with requests from society women for gowns designed on lines that found favour in the Egyptian court 1300 years before Christ.

Though the Egyptian excavations aroused world-wide interest, it is notable that the Egyptian influence in dress lasted but one brief season—flourished and died while the printers' ink was still damp with the news.

MATERIALS AND ACCESSORIES

The tale of textiles reads like a page from the "Arabian

¹From "The Psychology of Dress," by Frank Alvah Parsons.

Nights." Even before man inhabited the earth, spiders wove intricate silken webs, patterning with infinite pains the filmy threads that unwound from the spools of their bodies. Birds interlaced grass and bits of twig into cozy little nests. Even some types of trees and plants grew inner fibres so closely interwoven that they formed a sort of natural cloth.

One of the most primitive of human arts is weaving. The museums exhibit beautiful examples of this primitive weaving—rushes and grass cleverly interlaced to form little mats. Some are decorated with leaf and flower designs. In ancient Egypt the papyrus plant furnished material for some of the shorter coverings, like the early loincloths of papyrus matting.

The first actual cloth made by man was derived from the bark of trees. The bark was soaked in water until soft and pulpy, then beaten with rough wooden mallets to felt the fibres together. This crude cloth was permitted to dry and bleach in the sun, and was then decorated with coloured designs produced through the use of vegetable dyes.

Flax was one of the first materials that man utilized for purposes of cloth-making. Neolithic man about 10,000 years ago was already making mats and cloths of flax, and was wearing flaxen coverings in addition to the skins which constituted his chief attire. The ancient Egyptians, however, were evidently the first fully to realize the value of flax as a source of linen.

"Purple and fine linen was the raiment of princes in biblical days," says the historian. And "Pharaoh arrayed Joseph in vestures of fine linen," says the Bible. (Genesis XLI, 41, 42.) Picture writing on the walls of tombs indicates that the industry of weaving linen from the fibres of the flax plant flourished 4000 or more years ago, and that the flax plant was used as the symbol of a favourite deity.

But the linen industry was not confined to Egypt for any very great length of time. It spread to Babylon, to

Greece, and to Rome. By the beginning of mediævalism the use of linen was prevalent throughout all of Europe.

Woollen fabrics are almost as old as those of linen. The Greeks of Homer's time produced woollen fabrics of great beauty and firmness. Woollen shawls were made in India long before the Christian Era. Cotton is also of great antiquity, having been known to the ancient Egyptians and Greeks. But of all materials used by early man in clothes-making there is probably none with so romantic and interesting a background as silk.

Tradition says that silk was discovered 4500 years ago in China by the Empress Si-Ling-Shi. It is related that the Empress watched the caterpillars as they drew their shining threads across a leaf or bit of twig. She cultivated the silkworms, collected the silk and made from it a gorgeous, shimmering material which amazed and delighted everyone who saw it.

Then began the culture of silkworms in China and the manufacture of silken fabrics. For 2000 years China is said to have manufactured silk, selling to Japan, India, Persia, and keeping the secret faithfully hidden.

About 330 B.C. the great Alexander swept through Asia into India. When he returned to the Mediterranean lands he brought back with him the first raw silk Europe had ever seen. And Europe was fascinated. Where did it come from? How was it made?

But it was not until the 4th century after the Christian Era that the secret of the silkworm was finally disclosed. Four Chinese girls, kidnapped from a silk-weaving village, carried the secret to Japan, and from Japan the industry spread slowly to France, to England. In France the industry began to flourish in the 13th century, but in England all attempts to breed silkworms have failed. Attempts have failed in the United States also, so that China and Japan are still the centres of silk manufacture.

We have seen that weaving was one of the oldest of human arts. Egypt carried this art to a singularly high

level, and developed also the art of spinning. No one knows how thread was first invented. Possibly wool torn from sheep while passing through the bushes or brambles suggested the idea to the alert mind of man. Historians tell us that early nomadic tribes used threads to fasten together the skins or other garments they wore.

As early as 2000 B.C. the Egyptians were winding thread on sticks and spinning fabrics by hand. This original stick later became the spindle.

Women soon found that if a piece of wood was attached to the lower end of the stick, or spindle, it could be whirled around at a much greater speed. This weight at the end of the spindle came to be known as the whorl. And as a subsequent development, the need of something to fasten the wool to so that it would not become unravelled brought the distaff. At first, it was simply a piece of twig or wood around which the wool was wrapped. It was held in the hand or tucked in the belt, as most convenient.

Spinning by hand was a tedious and slow process, but the Egyptians made fabrics of extraordinary fineness. Some of the linen mummy cloths brought from the heart of Egyptian tombs are extremely fine of thread and even of weave. It was not until the beginning of the 16th century that a one-thread machine was invented to replace the old hand method perfected by the ancient Egyptians.

Arthur Weigall, present at the excavation and opening of the tomb of King Tutankhamen, says:

Among the clothes found in the tomb was a garment belonging to a king. It is of white linen, covered with 3700 sequins. It is a soft flowing robe, much like a nightgown. . . . One of the Queen's gowns is of deep blue, trimmed with blue fringe. It is made in cloak fashion, very loose. We also found sandals. These are like the strap pumps worn by women of to-day.

The Art of Dyeing.—One of the most primitive forms of dyeing fabrics or woven mats was to place a leaf or flower on the material which has been covered with the dye extract from vegetables, and place the whole in the sun. The sun transferred the outline of the leaf or flower to

the material, and then a small rounded twig was used to press in the design more firmly and fix it in place.

Various methods of dyeing existed in remote times among the Persians, and in India and China. The Arabs also had a method of dyeing fabrics, and the ancient Egyptians used rich dyes.

The Phœnicians carried the art to a high degree of perfection. They dyed fabrics with the juice of the *Murex trunculus* and *Buccinum lapillus* (shellfish) and produced various tints through different methods of manipulating the dye. Metallic and vegetable agents were also employed, but the use of the shellfish predominated.

To-day the dyeing of fabrics is a highly developed industry and one of the most fascinating phases of textile study.

Pins and Needles.—The origin of the needle is lost in antiquity. Embroidery, apparently achieved with needle and thread, has been found on ancient Egyptian garments, and we know that embroidery was known to the Greeks and Romans. Iron needles have been found in Egypt and in Rome. (A pair of Egyptian needles are illustrated.) Nevertheless, it was not until the 16th century that the manufacture of pins and needles was introduced in England.

Though bronze pins were known to Neolithic man, and pins of bone were used by savage races, women used wooden skewers to keep their clothes together until the end of the 15th century. It was then that the manufacture of pins began, and during the 16th century the most appropriate New Year's gift was a collection of these pins. Sometimes the money equivalent was given, from whence comes our term "pin money."

The safety pin, or its ancestor, appears to have been originated in central Europe about the close of the Bronze Age (1000 B.C.). A pin has been found which is of bronze, very slender, and bent in such manner that its point is caught against the head. Various modifications

of this type of pin are found, some highly decorative, among the people of early Europe. It seems that the pin was used for ornamentation, like our brooch, rather than to serve any useful purpose. It is surprising, since early man actually had pins of various kinds, that he did not use them for fastening clothes, that they did not come into general use until the 16th century.

Besides pins and needles, the Romans were well equipped with crude scissors and with thimbles. The word thimble is from "thumb bell," as the small, bell-like contrivance was originally worn on the thumb. The use of the thimble did not become general until 1675 when John Softing introduced it into England from Holland.

For keeping articles of dress, ornaments, etc., drawers and boxes were used resembling old-fashioned trunks. They were attractive, ornate—like the treasure chests of fiction. Most of them were fitted with bolts and locks. Small rings have been discovered fastened to miniature keys which would have been too small for a door, and were undoubtedly made for clothes or treasure boxes (see illustration).

Queen Elizabeth, who had 3000 separate dresses, found chests wholly inadequate for her wardrobe. Nor were cupboards or closets convenient, since the frocks and gowns were of gaudy crinolines. Therefore a special room was set aside for the Queen's gowns, and each one was hung on a separate wooden peg. This clothes room with its wooden pegs developed into the modern clothes closet with its separate hangers.

Some Popular Accessories.—The walking stick, or cane, has a history that reaches back to biblical times. The Hebrews carried long, crutched sticks like those of the shepherds who tended the flocks.

The young Athenian dandies also carried walking sticks while Greece was still an infant civilization. Some were tall like those of the Hebrews; some were short like the modern riding-crop.

In Europe the walking stick probably took the place of the sword when it began to disappear after the age of chivalry. Apparently, however, its use did not become general until the time of Queen Elizabeth, when everyone carried a cane or stick to be fashionable. The celebrated portrait of Charles I shows the King with his left arm akimbo, with his right hand resting on a long walking stick.

Under Louis XIV the custom of the walking stick was introduced to the French court. It became fashionable for men and women alike to carry the long, slender sticks. The women's walking sticks were invariably decorated with love knots.

Gloves are very old and were invented for purposes of protection. We find them particularly prevalent among early peoples in cold regions.

The ancient Persians and Romans wore gloves. In Homer Laërtes is described as wearing gloves while walking in his garden. (Odyssey, XXIV, 230.) Gloves of leather were worn at a very early period in war and in the chase to protect the hands. In the 8th and 9th centuries the custom of wearing gloves was almost universal in Germany and in Scandinavian countries.

From the 10th to the 13th century gloves showed a remarkable development. Gauntlets of leather were worn by men; those in military costume wore gloves the backs of which were covered by overlapping plates. During the 13th century women began to wear gloves for purposes of ornament, most of them being made of linen and reaching to the elbow. In the 16th century Queen Elizabeth set the fashion for wearing jewelled and embroidered gloves. In France, under Louis XIV, gloves of kid made their appearance. The women wore gloves of netted silk.

The cravat was originally a scarf. The word is from the French *cravate*, a corruption of *Croat*. This was the name given by the French of Louis XIV's time to the scarfs worn by the Croatian soldiers in the royal regiment. The scarfs were usually of linen or muslin, with broad

edges of lace. They became fashionable throughout France and travelled to England where they were known as *cravates*. When various forms of neckwear for men were introduced, the name for the scarf was applied to them, and it has survived in our word cravat.

The first handkerchief was a jackal's tail mounted on a stick. These "handkerchiefs" were used by the Bushmen in primitive times and served the double purpose of handkerchief and fan. Other savage races wove little mats of rush to wear on their heads, and used them also to mop away the perspiration from their foreheads,—a crude ancestor of the handkerchief.

The Greeks and Romans had both napkins and handkerchiefs. The napkins were used to dry the hands at the table; the handkerchiefs were small squares of linen which were sometimes tucked beneath the girdle when the Greek started on a trip.

The development of the handkerchief was rapid and in France particularly it reached an elegance scarcely conceivable. In the 17th century the handkerchief was made of exquisite hand-wrought laces, sometimes even ornamented with gems. In the 18th century when the taking of snuff became an established custom, women began to use coloured handkerchiefs. Louis XVI, inspired by Marie Antoinette, issued an edict during this century causing handkerchiefs to be made square rather than oval, round, or oblong, as individual taste saw fit.

Fans have an interesting history. The first fan was probably a palm leaf or some other natural device appropriated by man to keep away flies and gnats, perhaps even to cool the fevered brow in tropical climates. We know that in Egypt, 2000 years ago, fashionable hosts had special servants to stand behind dinner guests and fan them with huge papyrus fans.

Both men and women carry fans in China. Many carry with them also a pair of chopsticks tucked into the girdle. In Japan the woman does not consider herself well dressed unless her fan harmonizes with the rest of her costume.

In France the fan reached the height of its development under Louis XIV. We read that

Fans are an invariable accompaniment of feminine costume, and they are of rare beauty, exquisitely painted and mounted on sticks of carved or painted wood, mother-of-pearl, carved ivory, or gold. There are over five hundred makers of fans in Paris, and they enjoy special privileges accorded by the King.

The fan is still a popular accessory and we find it the "accomplishment of feminine costume" in the ballroom. Ostrich fans, to match or harmonize with the costume, are fashionable to-day as they have been for a century.

The first mirror was a quiet pool in which one caught a fleeting reflection. But the early Greeks had mirrors which were made of circular pieces of polished bronze, sometimes with richly adorned handles, sometimes without. The early Egyptians also had bronze mirrors, highly polished dishes, usually with graceful and decorative handles.

It was not until 1688, however, that glass mirrors were invented. A Frenchman, Louis Lucas, in the year mentioned, invented plate glass which, backed with the proper alloy, formed a mirror that for the first time gave woman a true reflection of her appearance, of herself.

The veil, like the glove and the walking stick, belongs to antiquity. In ancient Greece veils were worn to distinguish the different ranks, to indicate the free women from the slaves. The Bible makes definite mention of veils, as for instance :

And the servant said, This is my master ; therefore she took a veil and covered herself. (Genesis, XXIV, 65.)

As we have seen in an earlier chapter, veils have been used in marriage ceremonies from earliest times, and by various widely separated peoples. Among the Turkish people a law forbids unmarried girls to unveil before any men, and married women may unveil only before their husbands and relatives. A Turk, therefore, does not see his bride until he has married her, and he knows nothing

of her beauty save from the reports smuggled to him by women who have seen her.

An amusing tale is related of a man who, as is the custom,

Not having seen his wife until after his marriage and finding her far from handsome, was wholly disappointed in her. Two days after the nuptials, when she desired him to name the persons who were to have the privilege of *Namaharem* (the privilege of entering the harem, generally accorded to father, uncle, and brothers of the married woman) he said, "I give you my free permission to show yourself to all the men in the world except myself!"

Mohammedan women and Arabian women also veil themselves. But there is one tribe, the Tuaregs, nomads of the Desert, among whom the men veil and not the women. At the age of thirteen the Tuareg boy is veiled, and he does not show his face to anyone throughout life. The veil is not even removed for meals, but the food is brought up under it.

Women adopted the veil as a fashion to enhance their beauty during early mediævalism. We read that women—girls, young ladies, married women, widows, matrons—wear veils of linen and silk, shot with a gold thread, in which they appear ten times better-looking. In England all women wore the wimple and the veil because it was regarded as modest and fashionable to do so. Toward the close of mediævalism women in France and in England wore long veils which sometimes reached the ground.

To-day the veil is an important accessory to the fashionable costume and is worn without thought of modesty or custom, but for the sole purpose of improving the appearance.

Hats were intended originally as a protection from the sun, the cold. Later they became largely ornamental and decorative. The Egyptians wore simply a band around the hair. The ancient Greeks protected their heads with a flat, broad-brimmed hat which tied under the chin. Throughout the ages of dress development, hats for men and women assumed many striking and curious forms—

sometimes mere caps, sometimes great horned headdresses, sometimes hoods. During the Louis XIV age of elegance, hats were jewelled and plumed.

Until a short time ago hats were made in only a few popular sizes, but were fitted inside with a lining on a drawstring so that they could be tightened or loosened to fit the head. The little bow inside a man's hat is a relic of the old drawstring.

The Corset.—The story is told of a young woman who tried to engage Tennyson in a conversation. She could elicit only an occasional "humph" from him, until in embarrassment she began to fidget.

"You are like all the rest of them!" the great man then exclaimed. "You are laced too tightly. I can hear your stays creak."

Mortified and humiliated the young woman withdrew. A little later in the afternoon Tennyson came behind her, placed his hand on her shoulder, and said kindly:

"I was wrong, young lady. It wasn't your stays I heard creaking, but my braces; they are hitched up too tightly."

Long before Tennyson's day men and women both wore corset-like contrivances to make the waist appear slender and shapely. There are in existence Cretan frescoes 3500 years old, which show women in low-necked bodices and with wasp-like waists. Men and women on this fresco appear to be wearing something in the nature of a corset. Joseph McCabe tells how a Frenchman, examining these frescoes, was so amazed he exclaimed that they weren't Cretans at all but Parisians.

The North American Indians had a form of belt which was worn during the hunt. It was usually made of buffalo hide and had various methods of fastening. The purpose was not to keep the waist slender but to protect the stomach from the hoofs of animals.

As early as the 10th century corsets were being worn pretty generally by women everywhere. They were long and tight, mercilessly compressing the waist. Throughout

the Middle Ages these "stays" remained, varying with each new generation but becoming always more and more torturous. The tightly laced bodice also made its appearance, and the familiar stomacher. In the 16th century the stomachers were peaked and jewelled.

During the Elizabethan era fashion ran to remarkable extremes. Fashionable men were never uncorseted and women wore corset covers of steel. In 1628 Harvey made the discovery of the circulation of the blood, and his theory seems to have aroused considerable discussion concerning the corset. People began to think that the corset stopped the natural circulation of the blood, and therefore was the cause of all the little pains and aches and ills they had been suffering. It is notable that from this period the corset became gradually simpler and less hampering, although there have been several periods of reversal when it became more of a nuisance than ever, as, for instance, during the Victorian Era.

The corset has survived, but it is to-day modelled on lines that follow the lines of the figure. It is pliant, comfortable, with elastic and silk where whalebone was yesterday.

Shoes and Stockings.—In rocky districts it was necessary to give attention to the feet. The first sandals or coverings to protect the feet were mats of woven grass, strips of hide, flat pieces of wood. These were fastened to the bottom or soles of the feet with thongs that were sometimes brought between the toes and bound around the ankles. This was the original sandal. In colder regions more material was added to protect the foot, and the sandal became the shoe.

The man of rank, in early Egypt, was followed by a servant who carried a pair of sandals—evidently in case of need. These sandals, which later became general in use, were simply pads of leather or papyrus bound to the foot by two straps, one passing over the instep and the

other between the toes. Sometimes the front of the sandal was turned up to protect the toes.

The Egyptians were among the first to make shoes. Their warriors wore a sort of elaborated sandal, turned up around the foot and bound around the legs with thongs—the first type of crude shoe. They were being worn 4000 years ago.

The Greeks and Romans had decorative sandals, some of the Roman varieties approaching the shoe. For everyday purposes the Romans wore a light sandal, but when in full dress (toga) the *calceus* was worn—a shoe with slits at the side and straps knotted in front. The *calceus* had various forms by which the different classes were distinguished.

In Greece sandals were worn, but for hunting the men wore high boots that laced in the front. At first they wore only sandals which were fastened to the feet with straps around the ankle. These straps gradually developed into solid leather, attached to the sandal base. So was the boot originated.

Roman and Greek sandals are apparently as popular to-day as they were in ancient times. A recent advertisement featured sandal pumps of the type worn by the ancients, advising that "Roman and Grecian sandals are as popular as ever. These always give a line of grace to the foot and when developed in beautiful brocades are especially welcome."

In the cold regions some of the first shoes were bags padded with grass and tied around the feet. These clumsy foot coverings gradually developed into the moccasins and soft skin boots of the Indian and the Eskimo. Among the Eskimo it is regarded as the height of immodesty for a woman to show her feet, as it is also among the Chinese.

There has been much speculation as to the origin of bandaging the feet of female infants in China. An old tradition is that a Chinese Empress, noted for her vice, had a congenital club foot. Unwilling to have different

feet from the women of the empire, and desiring to conceal her own deformity, she decreed that every female infant have her feet bound immediately upon birth. Thus the custom of compressing the feet arose. But this is only tradition and has by no means been authenticated.

Many theories have been advanced concerning the nature and purpose of this custom. Havelock Ellis says that the foot was at one time "the focus of sexual attraction" and that the foot binding found among Southern Chinese is a relic of foot-fetishism. He points out that the husband would much prefer seeing his wife's compressed feet than her face—evidently because the foot to the Chinese is a sex symbol. This would account to some extent for the modesty of the young Chinese woman in concealing her feet.

It has also been suggested that the practice of foot compression had its origin in the wish to keep women indoors. This hardly seems true, for the compression of the feet does not render the woman unable to walk, nor are women secluded to any great extent in China. Another theory is that foot compression distinguished the lady from the menial, that the feet of wealthy infants were compressed and deformed to indicate publicly that they were helpless and dependent upon the bounty of their elders.

But whatever the origin and meaning of foot compression, it is interesting to note that the old custom is passing. Societies are being formed in China for the sole purpose of preventing the binding of women's feet.

To return to the evolution of the shoe, modern footwear had its beginning about the time that the Crusades started. The Crusaders and those who took long pilgrimages needed protection for their feet, and durable shoes began to make their appearance. In Holland the peasantry were wearing shoes cut from solid blocks of wood. Leather shoes and sandals of great beauty made their appearance in Italy, in France, in England.

When James I came to the throne of England,

High heels and immense roses distinguish the shoes of the day, and the high boots with turned-back tops win increased favour. Sharing the general tendency to softness, these are made of leather so limp that the weight of the wide top presses them down in creases above the broad strap which crosses the instep, while the width of the flaring top makes it not a little difficult for the wearer to walk, thereby adding, no doubt, to the famous cavalier swagger:

Long-toed shoes enjoyed a vogue before the appearance of the high heel. The shoes were extremely narrow, with toes five and six inches long, terminating usually in a point. The higher the rank, the longer the toes. The sacrifice of the long toes, because of their discomfort, brought about the popularity of the high heel. Fashion must be served!

Shoemaking as an industry was introduced into America in 1629. Thomas Beard arrived under contract to make shoes for the pilgrim colony. It was not until 1785 that right and left lasts were introduced in England; until then all shoes were made on one last. The use of machinery in shoemaking was introduced in the early half of the 19th century.

The first leg coverings or stockings were of leather. When they were originated is not definitely known, although it is fairly certain that man did not begin to cover his legs as a general practice until after the Christmas Era. The French were the first to attempt to make a stocking of any kind, and in the 7th century their men were wearing leather encasings, solely for purposes of protection and warmth.

But the decorative idea quickly entered the stocking, as it entered all other wearing apparel. From the 7th to the 13th century fabric stockings were worn, some of them of velvet decorated with gold embroidery, some of them pieces of cloth, silk or velvet sewn together. An authority tells us that during the 12th century "nobles wore stockings with sandals of purple trimmed with gold, and they bandaged their legs."

Chaucer makes frequent allusion to hose. From him we learn that in England in the 13th century long cloth or

velvet hose were worn by the fashionable, and that blue and white and red and white were the favourite colour combinations. He assures us that ladies wore "straite y-teyed stockings." Those who could not afford velvet were satisfied with blanket cloth.

Knitted worsted stockings were first made about 1565 in London by an apprentice named William Ryder. It was about this time that Queen Elizabeth received as a gift a pair of silk knitted hose which so delighted her that henceforth she wore stockings made only of the finest silk. These silk stockings were made in Italy and were very rare and costly in the beginning—"worth only a king's acceptance." But by the close of the 17th century every dandy and coquette had a supply of the shimmering hose—although it was not until twenty-five years ago that real silk hose came into general and common use.

Concerning the Hair.—As far back as we have record men and women have dressed and decorated their hair. Women have had combs from earliest times. The Iroquois Indians made combs from the antlers of deer. Primitive races made combs of bone, wood, even bronze.

Savage races have always given a great deal of attention and care to their hair. The Fijians, for instance, arrange their hair in a huge knot or mop, sometimes three feet in circumference, and dye it black, white, or red. The natives of the Belgian Congo in Africa use the oil from the castor bean for dressing the hair. Many African tribes have the custom of plastering the hair with mud.

Originally the Chinese permitted the hair to grow and wore it in a knot at the top of the head. But when the country was conquered by the Manchu, they were compelled to adopt the queue or pigtail. This was intended as a mark of bondage, but eventually it became a popular fashion and the pigtails were frequently lengthened by use of silk thread.

The ancient Greek women used long hairpins ornamented with sculpture. On festive occasions they adorned

their hair with garlands and wreaths of flowers. They used also ribbon decorations which later developed into the net and the kerchief.

Methods of arranging the hair in primitive times were so varied, and changed so constantly, that it would be tiresome to discuss them all. Apparently curled hair was considered more attractive than straight, even in ancient times, for in archaic figures we frequently see the hair arranged over the brow and temples in parallel rows of small curls which must have been made and kept in place by artificial means. Men and women alike curled their hair, and men also curled their beards.

Poppea Sabina, Empress of Rome (A.D. 65), Queen of half the world and enslaver of the boy king Nero, is pictured sometimes with her hair hanging straight, sometimes with her head a mass of tiny flat ringlets. Pomades and unguents were used to keep the curls in place, and sometimes they were plastered in position with a sort of mud.

With the coming of civilization methods of arranging and dressing the hair varied more than ever. No two people had the same type of headdress. In some places we find the hair brushed straight back from the forehead and allowed to hang loosely in back. Elsewhere at the same period we find the hair brushed high on the head and falling loosely around the temples. Sometimes the hair is straight; sometimes curled. Sometimes it is decorated with ribbons, pins, and ornaments; sometimes it is devoid of all ornament save a band or cap to keep it in place.

Our custom of short hair for men, long hair for women, is comparatively modern. Until mediævalism had been left well behind, men wore their hair long and flowing and devoted to it as much care and attention as the women. Writing of the nobles of the 12th century, one authority says:

Under the cap of velvet on their heads their hair, curled with crissing irons, hung, bound with ribbons, yet they wore beards and moustaches.

During the 13th and 14th centuries men wore their hair long and were particularly proud of their decorated beards. The Renaissance brought many interesting changes and we read that in Venice

the hair was for the most part false, bought from the country folks. It was combed in various ways, curled, plaited, dressed like a crescent moon with its horns turned up, or twisted into the form of a pyramid. In the middle of the 16th century a towering toupe came into vogue. Great pains were taken to achieve the blonde type and all sorts of hair bleaches were invented for that purpose.

Curling irons, henna for dyeing and silk floss wigs were popular throughout Europe during the period of the Renaissance. A fad widely prevalent in Italy in the 15th century was to "bask in the rays of the moon to thread the hair with beauty." Fashionable young ladies slept during the day that they might wander through their gardens at night, while their lovers told them how pretty the moon made their hair. Modernism, for purposes of its own, has attributed these hair-beautifying powers to the sun.

It was during the Renaissance also that "the King (Henry VIII of England) condemned all men to wear short hair, but gave them permission to make their beards as fierce as they chose, and to curl their moustaches in which, it is written, they took great solace." We have already seen how, in 1461, the Duke Philip of Burgundy caused 500 nobles to sacrifice their hair because he lost his through illness (see p. 530).

But with James I on the throne of England (1603) man again "aspires to length of locks and one sees them grow, deftly aided no doubt by the wig-maker, through the Dutch cut of James I to the rippling curls of the cavaliers, to mark their distinction, in the later Puritan period, from the more closely shorn 'Roundheads.'"

With the accession of Charles I to the throne we become familiar for the first time with the Vandyke beard. In France Louis XIV, with forty wigmakers permanently

busy in his employ, is establishing the fashion of long dyed wigs beautifully curled. In Venice "beards are large, waxed and ugly" and the Venetian nun, Arcangela Tarabotti, hotly rebukes those who "curl their beards and moustaches with curling tongs and paste them shiny with citron." But another writer of the period comes to the rescue of his sex and declares that "a man without a beard is hardly worthy of the name of man, his beard being the greatest proof of his manhood.

Nevertheless, in 1657, a man called Foscari was denounced as an ancient and a boor because he persisted in wearing a beard and cutting his hair. People divided themselves into factions: those who believed the hair should be cut and the beard permitted to grow; and those who believed the beard should be cut and the hair permitted to grow. For a while, toward the end of the century, custom and fashion favoured the clean-shaven face; but the fashion did not become a permanent one, for men still preserve for themselves the privilege of wearing the beard when it pleases their fancy to do so.

Toward the beginning of the 18th century, the tendency to wear short hair became evident among men. However, it did not manifest itself strongly, and we find the mode changing constantly. Sometimes the hair is worn short, sometimes long. Those whose hair is short wear wigs when the fashion decrees long locks. Not until the 19th century did the custom of short hair for men become definitely established. And even now, England, faithful to the old custom, insists upon wigs being worn in the law courts.

Through the centuries women wore their hair long because they were always taught to believe that the hair is the "crowning glory" of their appearance. It is interesting to note, however, the tendency of bobbing to remain among American women. Bobbing the hair was a fad at the court of Louis XIV and the "Dutch cut," a form of bob, was popular at the court of James I. But the bob of to-day, which originated during the war, is by no means a fad. It

has become a custom. Women may have cut the hair originally because it was the fashion to do so, because it improved the appearance. But bobbing has become a custom because women find it comfortable and convenient and are loath to return to the old-time methods of pins and combs and elaborate coifs.

The theory has been advanced that the bob which originated during the war, when women stepped into men's places and did their work while they were at the front, is a symbol of freedom. We read in a scientific journal that

The style of hair has played a conspicuous rôle throughout the ages in distinguishing slave from freeman. The Manchu conquerors imposed the queue upon the Chinese as a mark of their subjection. . . . The shaved head of the convict is the symbol of penal captivity. The tonsure of the priest is the symbol of his special (if voluntary) subjection to the Church.

Perhaps bobbing the hair *is* a reaction from the long ages of enforced adherence to the fashion of long hair. Perhaps woman is expressing freedom by extending to herself the privilege which man created for his own comfort and convenience—the privilege of cutting the hair. It is significant that men, as a whole, are opposed to the bob. They declare, as the Bible did more than 2000 years ago, that “If a woman have long hair, it is a glory to her.” Is woman, in defiance, attempting to prove that short hair can be a glory too?

Or will the bob, riding on the wave of feminism, prove but another whim to be swallowed eventually in the vast ocean of changing fashion?

THE CAREER OF COSMETICS

The paint pot and the lipstick belong to another age than ours. We are the lucky heirs who have inherited beauty methods of 4000 years or more in the making.

Beauty is no quality in things themselves [says Hume]. It exists

merely in the mind which contemplates them; and each mind perceives a different beauty.

The savage lady in the heart of Africa cuts her skin with sharp shells and rubs black paint into the wounds. The wounds heal in glorious purple scars which mark the woman a great beauty, according to African standards. The Eskimo lady rubs her skin with grease and fat—a complexion secret handed down from mother to daughter. Every Guiana lady knows that she must be fat to be attractive; and the lady who lives in the northern parts of the Chinese empire knows that she is hopelessly plain if her ears are not enormous.

Standards of beauty are as varied as the flowers of nature. But among civilized peoples there are certain definite standards of beauty universally acknowledged. The ancient Egyptians appear to have judged beauty according to these standards, and they had methods for coaxing and camouflaging nature to give the desired effect. These methods are singularly like our own.

The Egyptians, for instance, believed that lustrous, healthy hair was a great beauty. They approved of well-shaped lips and well-defined brows and lashes. They regarded a good complexion as absolutely indispensable to beauty, and they admired a slim, graceful figure even as we do.

On the occasion of the opening of Tutankhamen's tomb recently, the New York newspapers carried lengthy reports on the daily life of the Egyptians 4000 years ago. From the most authoritative of these reports we quote:

It was the custom of the Egyptian lady to make generous use of cosmetics, and her beautifully carved and ivory inlaid dressing table was always well supplied with appurtenances to beauty which have not changed much even to the present day. She had silver and bronze highly polished into hand mirrors, and alabaster pots filled with black and green eyebrow paint. And she carried abroad a rouge with which she generously dabbed her cheeks as soon as the bustling feet on the city streets had raised sufficient dust to take away the first bloom of her morning beautifying art.

The eyebrow pencil and the lipstick were quite familiar to the Egyptian lady. She painted her lips, her cheeks, her eyelids; she shaped her brows and tipped her lashes with a black pomade to make them look longer. We use the word "paint" advisedly, for even in pre-dynastic times the Egyptian ladies had alabaster palettes on which they mixed to a just-right hue the slate and paints with which they beautified themselves.

The Egyptians were extremely fond of perfumes. We read that

Exquisites of the day had as many as fifteen different kinds of perfume scattering their odours from their false wigs, while it was customary for the women to conceal little glass globules containing their favourite perfume within the tightly plaited tresses.

Costly perfumes were kept in alabaster jars and bottles. Perfume bottles, taken from the heart of old tombs, still have a lingering suggestion of the perfumes they once contained.

The use of perfumes is very ancient and is found among widely separated peoples. The Hottentot woman, for instance, has since the earliest times rubbed her body with butter, soot, and buchu leaves. Ancient writers identify Cleopatra with "the utmost luxury in the use of perfumery and flowers." Hawaiian women, and indeed almost all women of the South Sea Islands, decorate themselves with wreaths and garlands of fragrant flowers. Lucullus (Rome, 75 B.C.) always had fountains of perfumed water at his famous feasts.

In biblical times perfumed oils and ointments were used for purposes of enhancing bodily attractiveness. O. A. Wall says:

The Bible contains many references to perfume as of sexual importance, as when Ruth anointed herself to be attractive to Boaz; or when the bride in Solomon's Song says of her lover, "Who is it that cometh, perfumed with myrrh, frankincense and all the powders of the merchants?" When Judith prepared herself to captivate Holofernes, "She washed herself all over with water, and anointed herself with precious ointment."

Many of the ancients were fond of fragrant perfumes and ointments. We are told that

The aim of the ancients was to find some perfume so fully in accord with their bodies that the odour might seem as a real emanation from their own bodies.

Lucian, an ancient writer, tells us that the Athenians used different perfumes for different parts of the body, as for instance:

Egyptian essences for the hands and feet, Phœnician perfumes for the cheeks and bosom, marjoram for the hair, and the spirit of wild thyme for the thighs.

It is notable that while the ancients were fond of perfumes they regarded men who used them as effeminate. They admired fragrance only as emanating from the woman. It is related that Zeno, a Greek who lived about 350 B.C., upon meeting a man who was fragrant with many perfumes said, "Who is this, who smells like a woman?"

There are at the museums many rare old vases which show ancient Athenian maidens bathing and adorning themselves. On one such vase we see a slave pouring in the contents of a hydria over her nude mistress. On another we see a woman applying paint to her lips with a long, slender stick. Still another shows a young girl drying her hair in the sun. The Greeks had great faith in the sun as a beautifying agent for the hair and thousands of years ago the poet Menander wrote:

The rays of the sun are the best aid in making the hair fair. And our own men know it. For after they have bathed their heads copiously in the special ointment they make here in Athens, they sit in the sun, their heads uncovered, and wait there for hours for the hair to turn. And it does. Their hair gradually becomes a lovely golden.

When the Romans swept down upon Greece they captured "beauty doctors" who knew all the secrets of the golden ointment for the hair, face washes and skin foods for clear complexions, dyes for the fingernails, all the arts of beauty in which Athens had excelled. They carried

their captives westward with them—and the beauty secrets that had belonged to Greece became the property of Rome. The fashion of dyeing and waving the hair became popular among the conquerors. Men and women used special ointments and washes for their complexions, and used rouges and dyes to enhance their appearance. Special jars and pots for rouge, for perfumes and powders were made.

Old-fashioned Romans grumbled; they were shocked. Ancient Rome, which reared Romulus and conquered the world, was getting soft. Young men actually had their hair waved, like the slaves brought from Greece.

The toilet of the Roman lady of this period involved an elaborate and costly process. At night the face was covered with a poultice composed of boiled or moistened flour spread on with the fingers. It dried and hardened into a fragrant mask, like our much advertised beauty clays, and like our clays was supposed to clear the complexion of blemishes, make it smooth and attractive.

Poppea Sabina, Empress of Rome, was true to the arts of her ancestors. She

employed a hundred slaves to paint her face; to roll up the tight little curls of her coiffure, and then to right properly "pack" them with gum arabic that they might put to shame the ringlets of the goat's own hair. . . . Then her milk bath must be ready when she awoke each morn, and for this bath no milk but that of the she-ass must be used, for in this milk, her oracles had assured her, lurked a magic that would dispel all disease and blights from her beauty.

Milk baths have been popular at various intervals during the ages. Many famous French beauties are reputed to have bathed daily in milk. The bath of Poppea was made fragrant with a vial of precious Arabian scent, and we read of a beauty in Louis XIV's time that "her milk bath, warm and steaming, was rich with the fragrance of roses and lilies."

Not only the ladies of Egypt, Greece, and Rome were attentive to their toilet. Laird tells us that even savages

in the heart of the jungle have special paints and dyes which they use for beautifying purposes. In his "Expedition into the Interior of Africa" (vol. II), he tells us that the Felatah ladies in Central Africa are accustomed to devote several hours a day to their personal appearance. At night, he says, they wrap their fingers and toes in henna leaves so that by morning they are a beautiful purple. The eyelids are pencilled with sulphuret of antimony. The hair is coloured carefully with indigo. What Mr. Laird tells us of the Felatah ladies other authorities tell us of other savages who live in widely separated parts of the world. Even the most crude and primitive peoples have methods of beautifying themselves according to their own particular standards.

After the Christian Era the use of cosmetics was for several centuries more pronounced in Italy than elsewhere. Indeed, so extreme did the use of paints and powders and special ointments become that the Italian monks were moved to complain that "the ladies of Italy are immodest and dishonest for they try to cheat Nature herself, spending hours in the sunshine, after anointing their hair with some secret ointment." This "secret ointment" by the way, has been discovered:

Take dried cauls, from the Orient, grind them to powder, and mix in equal proportions with the yolks of eggs that have been boiled; then mix with wild honey. Rub on the hair in the evening, wrap the head in a kerchief and wash in the morning with olive oil soap and fresh water.

The user is further advised to sit in the sun all day after using the ointment, "being careful not to get sunstroke."

The custom of powdering the hair originated in Venice. In Venice too, about 1500, the custom of wearing beauty patches came into style. False hair of all kinds was worn, and a sort of gum pomade was used to keep it in place.

The 17th century in France saw an extravagant use of cosmetics of all kinds. Rouges and powders were used to such extremes that La Bruyère says:

If their wish is to be pleasing to men, if it is for the men's sake that they lay on their white and red paint, I have inquired into the matter and I can tell them that in the opinion of men the use of white paint and rouge makes them hideous and disgusting; and that rouge by itself, both ages and disguises them.

La Bruyère does not stand alone. In every generation there have been men, and sometimes women, who condemned the beauty methods of the "younger generation." It was true thousands of years ago in Athens. It was true when oatmeal paste and lemon juice were applied to freckles, when dragon's blood and the fat of sheep made a pomade for the fingernails and toenails, when eyelashes were dyed and faces whitened. It is true to-day, and it will continue to be true as long as young people introduce unusual methods of beautifying themselves. The world resents anything that suggests a change in the old order of things.

At all stages of civilization people like a slight variety, but deviations from what they are accustomed to provoke a disagreeable association of ideas.

Which explains the appearance each season of old complexion washes and hair bleaches in new guise, and the ever-present protest of the reformer.

CHAPTER XVII

FUNERAL CUSTOMS

*All that tread
The globe are but a handful to the tribes
That slumber in its bosom.*

—BRYANT, "Thanatopsis."

*The world will turn when we are earth,
As though we had not come nor gone;
There was no lack before our birth,
When we are gone there will be none.*

—OMAR KHAYYAM.

*What man is he that liveth, and shall not see death? Shall he deliver
his soul from the hand of the grave?* —PSALM LXXXIX, 48.

FEAR OF THE DEAD

LIFE is a prelude to death. The one lasts but a moment; the other is an eternity. For man there is no life—without death. Fate breathes upon a handful of dust, and a soul comes tumbling down to earth. And at the same moment a life-spent soul crumbles comfortably into dust again. The pendulum of life swings everlastingly to the tune of *life—death; life—death*.

While the arc of life swings with the pendulum across time, man lives, and plays, and eats, and reproduces his own kind. He divides his gift of life into little cubes called years, and each cube is a bit of lifetime cut from the whole. Then comes death and the long silence.

Where does man go? What does he do and see when he vanishes into the great unknown? Does he live again? Can he return to earth again? Or is he just—gone?

Man puzzled the problem on prehistoric plains when one of his fellows dropped dead on the march. He could

not solve it then. He cannot solve it now, though he has created religions to comfort him.

And it is because man does not understand the mystery of death that he fears it. To-day the fear of death and of the dead is tempered with faith and hope and with an understanding of life's eternal cycle. But when man was young he had neither faith nor hope nor understanding. His little world was shrouded in superstition; he regarded his very shadow with ignorant fear.

It is interesting to meditate upon man's earliest experiences with death: A cave fellow lying cold and silent. A savage who was but yesterday drunk with life, now flat and still on the ground. A cautious hand reaches out to touch the body. It is clammy. Glazy eyes stare unseeing into the sky. Those who look upon this mystery are filled with a sudden terror. An evil spirit must have claimed their comrade. Some unseen enemy must have killed him. Perhaps an enemy that still lurks in the vicinity! And so they flee from the spot in panic, leaving the body to be ravaged by the beasts.

Primitive man did not accept death as due to natural causes. He believed that death was the result of violence, either at the hands of human or animal enemies, or caused by evil and unseen demons. To the primitive mind man should continue to live until old age wore out the body or until some beast crushed out the breath. For a man or woman still young, without wound or injury, to fall silently asleep and never awaken was inconceivable, uncanny.

Consequently there existed in early times a universal dread of the "long sleep"—the death which came without tangible cause. Man refused to accept this mysterious "sleep" as the end of life. Surely he who slept so had been bewitched! He who lay so stiff and cold must be the victim of malevolent spirits!

And there grew up many word-by-mouth myths concerning this terrible demon who struck silently and without warning. There were, indeed, some fellows more imagina-

tive than others who claimed actually to have seen this demon—a great bird-like creature with huge black wings and a tongue of fire.

The familiar Reaper and Death-angel are relics of these old, old myths. The Bible speaks of the Death-angel who stretched out his hand upon Jerusalem to destroy it, the Lord repented him of the evil, and said to the angel that destroyed the people, It is enough: stay now thy hand. (II Samuel, XXIV, 16.)

And again:

I looked, and behold, a pale horse; and his name that sat on him was Death . . . And power was given . . . to kill with sword, and with hunger, and with death. (Revelations, VI, 8.)

Even the poet Longfellow was faithful to the old superstitious notion that attributed death to a grim and unseen Reaper. He tells us:

There is a Reaper whose name is Death
And with his sickle keen
He reaps the bearded grain at a breath
And the flowers that grow between.

Among the ancients, death was the great Evil before which the strongest tribesman quailed. Our savage ancestors were fully convinced that when death claimed one of their number an evil spirit entered the body and dwelt there. Thus they feared not only the unknown Evil which caused death, but the dead body in which this Evil was supposed to linger.

O'Brien says:

Afraid of no living enemy, nor of the sea, meeting the shark in his own element and worsting him, fearlessly enduring the thrust of the fatal spear when an accident of battle left him defenseless, the Marquesan warrior, as much as the youngest child, had an unutterable horror of their own dead and of burial places, and of the demons who hovered about them.

The Veddahs desert their homes whenever any one dies, returning only when they feel that the demon or demons

have gone. Sometimes they do not return at all. The Australian Blackfellows show their fear of the dead by burning all his property and running away. Evidently they believe that the demon resides not only in the dead body, but in the property belonging to the dead man.

At Batta funerals natives march behind the body brandishing swords, to drive away the demons. The members of a Zulu *kraal* eat "medicine" in time of death to protect themselves from the evil influences. The Greenlanders throw out of the house everything belonging to the dead man. The Galibis of Guiana dance on the newly covered grave to "stamp down the spirits."

J Since the earliest times the corpse has been an object of superstitious dread. As Elsie Parsons indicates, "The dead have become alien to the living, and hence formidable." Even we are encumbered with fear of the dead. Who will with perfect ease spend a night in the cemetery? Who will sit at night beside a dead body without being conscious of a vague and disquieting nervousness?

To avoid the evil influences of the dead, primitive man developed a system of precautions; and upon these precautions are modern burial customs based.

Disposing of the Body.—In the beginning man did not bury his dead. If a tribe were on the march and one of their number died, they deserted the body—left it to rot or be devoured by animals where it fell. Or if a tribe were squatting at the foot of a mountain and one of their number died, they moved on a little, found another squatting place a little way off, and the body was left to bleach its bones in the sun.

Jensen tells us in "The Long Journey" of the life and death of the Man—he who was strong of body and of voice, he who marched at the head of the tribe, leader of his little band. Brutal and powerful was the Man in youth, wise and cruel in age. Then feebleness overtook him and he became weaker, weaker.

Finally the Man lay down all the time and had people brought

to him, felt his way with closed eyes until he found a fleshy spot and then dug his fingers in. Ah, at one time he had had such strength in his thumbs that he could pluck a piece of flesh out of a man's body, but now his claws scarcely left a blue mark.

And thus he lay one morning, with scarcely a sign of change, but without movement and without breath, white-haired, long and thin, with stupid eyes open to the sky. He was cold; they brought a child to his hand, but he pinched no more. It was he and yet not he—in silent wonder and fear the tribe stood around him. . . .

When they realized that he would move no more, one of the men stretched out his hand and took the staff, swung it above his head with a roar, and instinctively all the rest fell on their knees—now *he* was the Man.

For years afterwards, when the tribe passed the spot where the Old Man had lain down, he was still there; they reverently turned aside, but stole a glance and saw him lying in the same position, a long whitened skeleton in the grass and the dreaded head turned to the sky with gaping teeth and great empty eye-sockets.

It was fear of the dead body that led early man to dispose of it. Since demons and evil spirits caused the "long sleep" they must still be lurking about the victim, and man was afraid of falling into the "long sleep" himself. The thing to do, consequently, was to dispose of the body, demons and all. This originated customs of burning, burying, and otherwise disposing of the dead.

Burying would appeal particularly to the primitive mind seeking to shake off a superstitious fear. A body buried five or six feet below the ground could do no harm. But a body lying on the surface of the ground could shed its evil influence upon the living.

The custom of burying the dead can be traced back even to the Neanderthal men. Wells says:

The later Neanderthal men seem to have buried their dead, and apparently with food and weapons.

Writing later of Neolithic man, Wells says:

They buried their dead, but before they buried them they cut up the bodies and apparently ate portions of the flesh. They seem to have done this out of a feeling of reverence for the departed; the dead were "eaten with honour" according to the phrase of Mr.

Flinders Petrie. It may have been that the survivors hoped to retain thereby some vestige of the strength and virtue that had died. Traces of similar savage customs have been found in the long barrows that were scattered over western Europe before the spreading of the Aryan peoples, and they have pervaded Negro Africa, where they are only dying out at the present time.

It is difficult to decide just when man began to bury his dead. We have record of the custom as far back as it is possible for us to have definite record of anything concerning man. Recent discoveries in South France indicate that man not only buried his dead 15,000 years ago, but actually had tombstones to indicate the graves. In reporting the discoveries, the *New York World* published a cable from France, part of which we quote here :

Dean Charles Deperet of the Faculté des Sciences at Lyons has been excavating in the famous prehistoric deposits at Solutre in South France and has uncovered two carefully buried skeletons, in quaternary layers, judged to be at least 15,000 years old.

Above the head of each skeleton Dean Deperet found a cut stone placed vertically, so it would have been above ground, in the epoch when the Cro-Magnon hunters buried these two with their feet toward the rising ground and their heads toward the setting sun. It is considered the first authentic palæolithic sepulchre.

Customs of Burial.—At first the burial of a dead body was very crude. A hole was dug in the ground and the body dropped into it and covered with earth. Or if there happened to be a handy ravine or crater in which to drop the body, so much the better. It obviated the need for digging a hole.

But gradually death came to be looked upon as the last great event in man's life, and like all great events was duly celebrated. The breaking of the earth and preparing of the grave became a ceremony. The body was lowered carefully and with a certain reverence. And when the hole was filled with earth again, there were dancing and feasting—inevitable accompaniments of primitive ceremony.

The natives of Guiana dance upon graves even to-day. The Congo Kaffirs bury their dead amid elaborate cere-

Coffin from Lisht, South Pyramid, Egypt, 12th Dynasty.
(Courtesy of Metropolitan Museum of Art)

monies, and keep fires burning over the graves for a month. Among the Samoyeds there is considerable ceremony while the sorcerer goes through the sacred rites of soothing the departed. The Bushmen not only dance upon the graves but cover them with stones.

Ceremony was apparently a part of the burial customs of primitive man. In the third interglacial period, about 100,000 years ago, man buried the important dead—the leaders and the “strong men”—with elaborate ceremonial, and with evident respect. One of the famous skeletons of this period

is that of a youth who apparently had been deliberately interred. He had been placed in a sleeping posture, head on the right forearm. The head lay on a number of flint fragments carefully piled together “pillow fashion.” A big hand-axe lay near his head and around him were numerous charred and split ox bones, as though there had been a feast or an offering.

Our fancy lingers for a moment with these people. We see a circle of naked men, dancing and chanting in the moonlight. There is a youth lying stiff and silent in the centre of the circle—dead. His head rests on a flint “pillow.” His favourite axe is at his side. Nearby the sacrificial fire sends its thin gray coil of smoke into the sky. All the night long there are dancing and stamping to frighten away evil spirits that may be lurking about the body; and there is feasting in honour of the departed. Sacrifices and ceremonies take place, while the moon looks on in solemn wonder. And when the moon fades slowly from the heavens and the first golden ray of the sun greets the morning, the body is lowered into the grave prepared to receive it—buried—with more chanting and more feasting.

Thousands of years later, in the Palæolithic age, man is burying his dead with greater ceremony. The body is painted and decorated. There are great feasting and celebration. And with the body are buried weapons, food,

ornaments. The significance of these gifts to the dead will presently be discussed.

The European Neolithic people buried their dead but ate part of the bodies before burial, as we have already seen. Wells informs us, however, that

They buried some of their dead, but not the common herd, with great care and distinction, and made huge heaps of earth over their sepulchres; these heaps are the barrows. . . . In connection with these mounds, or independently of them, they set up great stones (megaliths) either singly or in groups, of which Stonehenge in Wiltshire and Carnac in Brittany are among the best-known examples.

The Iberian race, distributed over Greece, Asia Minor, Great Britain, Ireland, France, Spain, North Africa, and Italy, before the Aryans spread over those lands, made of burial a great ceremony—elaborate and impressive. The important people were buried in chambers made of huge stones, covered over with earth. These great mounds of earth, concealing Iberian graves, are known as the long barrows because they are considerably longer than they are broad. The bodies were placed in these "megalithic chambers" in a sitting posture.

The Aryans, who followed the Iberians, burned their dead and placed the ashes in urns shaped like houses. Most of them are like rounded huts with thatched roofs. Some of these little houses, containing the ashes of human bodies, have been found in ancient Aryan burial mounds, known as round barrows.

The making of a prehistoric barrow is very interestingly described in the concluding passage of the *Iliad*. The following, re-quoted from the "Outline of History," is from Chapman's rhymed translation:

. . . Then they brought the bravest of his kind
Forth to be burned. Troy swam in tears. Upon the pile's most
height
They laid the body, and gave fire. All day it burn'd, all night.
But when the elev'nth morn let on earth her rosy fingers shine,
The people flock'd about the pile, and first with gleaming wine

Quench'd all the flames. His brothers then, and friends, the snowy
bones

Gather'd into an urn of gold, still pouring out their moans.
Then wrapt they in soft purple veils the rich urn, digg'd a pit,
Grav'd it, built up the grave with stones, and quickly piled on it
A barrow. . . .

The barrow heap'd once, all the town
In Jove-nurs'd Priam's Court partook a sumptuous funeral feast,
And so horse-taming Hector's rites gave up his soul to rest.

Burning the dead was simply another way of destroying the body—and the demons supposed to dwell within it. The Aryan peoples, the North American Indians, and many savage peoples burned or cremated their dead—a phase of funeral customs that we will consider in a moment.

The ancient Vikings buried their kings and queens in their ships. One of these ancient ships which served as the sepulchral chamber of a Viking queen and her hand-maiden was discovered accidentally a short time ago by an Oseberg farmer while he was digging a barrow.

In the early civilizations we find burials of a more pronounced ceremonial nature than ever before. In Egypt we find anointing and embalming. We find pyramids, which are huge tombs; and mummifying, which is a method of preserving the body. The burial ceremonies are elaborate and impressive and vast treasures are buried with the important dead. Recently a unique cemetery was discovered in Egypt in which a number of black cats were unearthed—mummies of cats sacred to Egyptians who lived four or five thousand years ago.

The passage from the Iliad on the preceding page gives us a fairly good idea of the burial, or rather cremation customs, of the ancient Greeks. In Greece only suicides, unteethed children, and persons struck by lightning were denied the privilege of cremation and were buried. The ceremonies attending the disposal of the body, however, were always elaborate and solemn.

With the catacombs of Rome we are all familiar. These

famous underground cemeteries represent one of the most amazing wonders of antiquity. The catacombs are about from fifty to seventy-five feet below the surface of the earth, and so intricate and extensive are they in their corridors, passages, and windings that they form an endless labyrinth. One authority has calculated that about seven million human beings are buried in these ancient catacombs!

The Assyrians dug huge excavations into which they cast the bodies of their dead, one upon the other. Even when they began to use coffins they piled them one above the other in a great excavation which reached sometimes to a depth of sixty feet.

The ancient Hebrews buried their dead, and used stone pillars to mark the graves. The Bible tells us that "Rachel died, and was buried in the way of Ephrath, which is Bethlehem. And Jacob set a pillar upon her grave." (Genesis, XXXV, 19, 20.) Many references to burials are made in the Bible, which give us excellent verbal pictures not only of the burial customs of the Hebrews but of their neighbours.

It would be useless to attempt a discussion of all the burial customs of ancient and of savage life. There is a wide variation in custom with regard to death—the inevitable climax. Every savage tribe has its own peculiar ceremony, its own distinctive customs. There are some who think very little of the corpse and dispose of it in an unceremonious manner. There are others who fear the mystery of death and dispose of the body amid great ceremonies and rites. A thorough discussion of the burial customs of mankind would fill a volume.

Then, of course, there are the savage races that do not bury their dead, even to-day. The Veddahs, for instance, do not bury their dead but throw the bodies into the jungle. Many Australian tribes run away from the dead bodies, leaving them to rot where they fall—a custom which goes back to dim antiquity—or else they destroy the body by

burning. The Mongolians throw dead bodies to horrible wild dogs that live on nothing but human flesh. These dogs are of the mastiff type and are said to be the most vicious and dangerous beasts in the world.

The Coffin and the Tomb.—In its long development through the ages, the coffin has taken many shapes and forms. One of the earliest types of coffin was the tree, cut down and hollowed to accommodate the body. These tree coffins bearing the dead were sometimes set adrift in the river, sometimes left upon the ground, sometimes buried—depending entirely upon the people and the conditions in which they found themselves.

The custom of burying the dead in a tree-trunk is symbolical. The tree represents the Great Mother, the tree of life that bore the child as the branch. Use was therefore made of the scooped-out tree in death and in burial. This is simply another version of the dust-to-dust theory.

The presence of the tree in the churchyard or cemetery is due to ancient notions concerning the tree as a dwelling place for the spirits of the dead. The Dieri tribe of South Australia, for instance, regards certain trees as sacred, believing them to be ancient ancestors transformed. In other sections of Australia it is believed that the great bat which causes death lives in a tree, and that when a man is killed by this bat—in other words, when he dies of no apparent cause—his soul goes to join it in the treetop. Some of the natives of New Guinea think that the spirits of their ancestors live in the trees; a belief found also in Corea.

To be buried “in the shade of a tree,” therefore, came to be looked upon as a man’s natural right. If there were no tree in the vicinity, where would his spirit dwell?

✓ The first actual coffins, as we know them, probably originated in Egypt. There is no doubt whatever that the use of coffins originated in the desire to preserve the body, rather than destroy it. The Egyptians believed that the spirit would return to the body some time in the future,

and that consequently "the body must be kept habitable for the soul when it should return to earth from its celestial wanderings." It was believed that resurrection would take place from 3000 to 10,000 years in the future.

At first burial in Egypt was in stone compartments, and all were buried in this manner, some in more elaborate compartments than others. The people had an intense belief in and concern about their life after death, and they made every provision for the comfort of the spirit in the next world. The richer Egyptians were buried with all their precious ornaments and furniture, with beautiful clothes and food. In the natural sequence of events, the rifling of graves became a common crime, and not even the graves of the mighty were spared.

To protect their remains from desecration, the kings built great stone structures to house their bodies and their valuables, tremendous coffins in which to preserve their mummified bodies until such time, thousands of years hence, as the spirit should see fit to return. These great stone structures are known as the pyramids; they are the tombs of the kings of the early dynasties.

The Sphinx, generally associated with the pyramids, is believed by most authorities to be a sort of guardian of the royal cemetery it overlooks, frightening away evil spirits that might seek to enter this abode of the important dead. But no one knows definitely when the Sphinx was carved, by whom, or precisely what is its significance. The lips of the Sphinx are still sealed; its secret still baffles the world. What seems possible to this author is that the Sphinx may have been carved by some vain king who desired his tomb to be different from the others, and who kept thousands of slaves busy a lifetime building this impressive monster to house his body. The Sphinx faces east; could it not have been placed so as to be ready to welcome the spirit when it should come with the sun from the east, and reënter the body of the king?

It is only in Lower Egypt that we find the pyramids.

The Theban kings and their subjects never erected these great stone structures, but cut their tombs from living rocks. It appears to have been the custom with the kings, as soon as they ascended the throne, to begin the preparation of their tombs and "the excavation seems to have gone on uninterruptedly, year by year, until the hand of death ended the king's reign and simultaneously the work on his tomb. The tomb thus became an index of the length of the king's reign, as well as his magnificence." These tombs, cut from the rock in the mountains of Thebaid, are still to be seen in Upper Egypt.

Not every one who died in Egypt was buried in a tomb. Although they believed firmly in an after life, the Egyptians were of the opinion that only those who were powerful and important in this life would be important in the next; while those who had no importance here would have none in after life. Thus the great were buried in magnificent tombs; ordinary people were buried in rude stone compartments.

The Egyptian word for "coffin" is from *Kas* which means "to embalm," "to bury." The word, elaborated into *Kast*, means the enclosure of the body, the receptacle into which the body is placed—hence, the coffin.

In Babylonia great boxes of clay were baked to form coffins. We find clay coffins also among the neighbours of Babylonians, who doubtless copied the custom from the originators.

The Greeks, as we have seen, cremated their dead. Like the Egyptians, however, they believed in an after-life for the great and gradually it became customary to bury the important people. When cremation was practised, the ashes were placed in urns of burned clay and buried. When burial became the custom, the body was enclosed in an elaborate stone casket, like the Roman sarcophagus. ✓

The Chinese have buried their dead since the earliest times. Custom dictates that no matter where a Chinese may die, he must be brought back to his place of birth for

burial. The coffin which the Chinese uses is ornate and elaborate, and it is regarded as an appropriate present for an aged or ailing relative. Many wealthy Chinese own their coffins long before they die; some even carry their coffins with them when they travel.

Nor is this custom confined solely to the Chinese. It is well known that Sarah Bernhardt provided in her lifetime for her coffin, and carried it with her wherever she went. Darwin, too, ordered his coffin in his lifetime for the purpose, it is said, of giving work in the slack season to the carpenter who made boxes for his natural science collection.

There have been many kinds of coffins, just as there have been many customs of burial. Clay, stone, wood, even iron coffins have been used. And just as there have been many kinds of coffins, there have been many laws, regulations and customs concerning the manner of placing the body in the coffin.

The Bushmen, for instance, believe that the sun will begin to rise late in the morning if the dead are not buried with their faces to the west. The Samoans and Fijians bury their dead with feet and faces toward the west, whither their souls are supposed to have preceded them. The Guarayos, on the other hand, bury their dead with the head turned to the east, because their god Tamoi is said to have his happy hunting grounds in that quarter.

Recent excavations in Queens, under the direction of Dr. Thomas H. Evans of the American Museum of Natural History, disclosed more than a dozen skeletons. According to the report, all the skeletons when found were so placed that their heads turned to the west—an old Indian burial custom.

In "Gulliver's Travels" we read that the Lilliputians "buried their dead with the head downward because of the belief that in eleven thousand moons the earth would turn upside down and the dead would rise again." Evi-

dently by this means of burial the Lilliputians planned to be on their feet when they came to life again.

There is an old legend that Christ was buried with His face toward the west; but the Church follows the custom of burying the dead looking east, because of a custom older than itself of facing the east when in attitude of prayer.

The savages have many customs concerning the method of placing the dead in the ground. Some bury their dead in a sitting posture, some with the faces toward the ground. Some bury the dead with the knees drawn up under the chin, others with the body curved in the position it takes in the womb before birth—a custom which indicates an early understanding of impregnation. The ancient Peruvians, for instance, always placed their dead in the position of a fœtus for burial.

Among many savages—indeed, even with us—the body is carried away feet foremost. Savages believe that if the dead body “sees” the house while it is being carried away for burial or for burning, it will cast its evil influence upon it and cause either illness or other deaths to enter. Hence, the carrying away of the body feet foremost.

It was a custom in Egypt to cast sand three times upon the remains of the deceased—a custom observed with great ceremonial. This survives with us to-day in our “ashes to ashes, dust to dust,” and a handful of earth cast three times upon the coffin lid.

Marking the Grave.—The first gravestones were those used by the Bushmen and other savages to keep the evil spirits from rising and causing damage. The Bushmen believed that unless heavy stones were placed upon the grave mounds, the evil spirits supposed to dwell in the dead bodies would not remain in the earth, but would rise to claim more lives.

The marking of graves goes back into remote antiquity. Evidently primitive man placed stones or other markings on graves not only to keep the evil spirits from rising, but

to mark the spot so that he could avoid it. The custom originated for the purpose of warning people away from a grave has become a custom for distinguishing one grave from another, and so enabling mourners to recognize the particular mound for which they search.

We have already seen that Palæolithic man, thousands of years ago, used headpieces of cut stone to mark the graves of his dead. Whether these stones were used for purposes of avoidance or purposes of recognition we cannot be certain.

Neolithic man set up great stone megaliths above the mounds which hid the dead. Sometimes these stones were put up singly, sometimes in groups. Stonehenge is an excellent example. It is known as "the finest megalithic ruin in Europe." The name Stonehenge means "hanging stones"—the stones being partly suspended. Stones of huge size were used, and the marvel is that they could have been lifted to be placed in their cross-wise position. The stone cross placed on the modern grave is like a pinpoint in comparison with the great, cross-like stones at Stonehenge.

We know that the Greeks used gravestones, for relics have been found. The stones were usually ornamented with sculpture. The Hebrews marked the graves of the dead with stone pillars (see p. 486). The tombs and the pyramids of ancient Egypt mark the places where dead are buried. Some peoples built vaults for their dead, others erected tall pillars of ornamented stone. Some marked their graves with simple slabs of wood or stone; others built magnificent shrines and mausoleums.

Even among the savages we find customs of marking the graves. Among the Congo Kaffirs we find that the grave of the man was marked with a staff; the grave of the woman, with a simple basket. The Kaffirs mark the graves so that they can be identified.

With the coming of Christianity the marking of graves became common. The ring cross which primitive peoples

used on their graves to represent the sun was adopted as an appropriate headpiece, but after the crucifixion the simple cross was used, for religious as well as reverential purposes. The cross is even to-day the popular grave mark among Christians.

Decorating graves with flowers and wreaths is an old custom, handed down to us through many generations. Wreaths made of thin gold have been found in Athenian graves. The Egyptians adorned their mummies with flowers, and the mourners carried flowers in their hands.

In a recent article concerning the opening of Tutankhamen's tomb, we read:

Opening one of the gold and jewelled boxes a romantic touch was added to the sombre silence of the tomb. It was filled with roses, still preserved through the 3000 years or more which separate us from Tutankhamen's funeral. As the explorers gently lifted the lid from these old flowers of the Nile's bank, plucked thousands of years ago, a slight perfume greeted them, which had remained in the flowers in their sealed boxes down through the centuries.

A custom of early Christianity, still observed in various rural sections of Europe, was to make wreaths of flowers from ribbon and paper and give them to the church as a memento of the departed one. These artificial wreaths were hung in garlands around the walls of the church where they remained until so old and dusty that they were no longer recognizable. Then they were removed to make room for the new wreaths. These artificial wreaths of long ago have evolved into our mourning wreath of living flowers, usually sent by friends or relatives of the departed and placed upon the grave.

The Custom of Cremation.—Since the evil spirits that cause death are supposed to dwell in the body, according to the primitive notion, it is not surprising that cremation should have become one of the earliest methods of disposing of the dead. Cremation, or burning of the body, appears to have been practised universally in the ancient world, except in Egypt, in China, and among the Hebrews.

The Greenlanders, who cremate their dead to-day as they have done for centuries, believe that there is danger of pollution from the evil spirits until the smell of the corpse has passed away. They burn the dead body almost before it has become cold and try to avoid inhaling any of the fumes. They burn also everything in the house that belonged to the dead person.

We find this custom of burning the belongings of the dead among many savage tribes. The Zulus always burn the property of the dead to prevent the evil spirits from hovering in the vicinity. Many Australian and African tribes observe this custom. It is found also in certain Indian tribes—indeed, exists even among civilized peoples. We frequently hear of clothes or other belongings being burned after a funeral.

In Burma, "the more important the person the longer he is kept lying in state after death previous to cremation." One writer tells of an archbishop who was kept embalmed and on public exhibition for a period of two years before the funeral ceremony finally took place and the body was cremated.

The Iberian and Aryan races practised cremation, and the custom in India is a relic of the Aryan practice. In India the body is cremated on the funeral pyre, and until recently widows were sacrificed alive on the burning pyres with their husbands.

At one time the practice of cremation was widespread and seemed likely to become a universal custom. However, the Christian doctrine of the resurrection of the body discouraged the custom. If the body were to be resurrected, why burn it? *Could* it be resurrected if it were burned? The early followers of Christianity pondered this problem, and it is pondered still. Many clergymen, however, have from time to time debated the advisability of cremation, declaring that the power able to resurrect the body decomposed in the grave could resurrect the body cremated and reduced to ashes. Mr. Haweis, for instance,

in his *Ashes to Ashes* (London, 1874) proclaims himself an advocate of cremation. Discussions on this subject come up even to-day.

Belief in an After Life.—The first thought of another life after death possibly occurred to primitive man when he saw some dead friend or relative in a dream. Waking from his sleep he recalls that he saw the person they had burned or buried. He lived after all! Life did not end on this earth, then. There was another life, another existence. Man must have made much of this important discovery.

It was not a sudden discovery, of course, nor did the thought occur to all men at once. It came as all other great truths came, dawning slowly but surely upon the consciousness of primitive man as he emerged from the darkness.

The savage's conception of the soul, or the spirit, is a miniature man—an exact reproduction of the person. The Hurons, for instance, believed that the spirit had arms, legs, head, body just like the person it represented. The Nootkas (British Columbia) believed the soul to be a tiny man living within the head.

There are, however, savages who think of the soul as a bird which can fly from the body at will. The Bororos (Brazil) have the notion that the soul is a bird which leaves the body occasionally, during which time the person sleeps. When the bird returns, the sleeper awakens. Should the bird forget to return, the sleeper enters the "long sleep," or death. The Bohemians also regard the soul as a bird, as do various Indian tribes.

The shadow, or reflection, is another form of soul, in the savage sense. The Basutos thoroughly believed that a crocodile can cause a man's death by snapping at his reflection in the water. Other savages believe that to see one's own face in a mirror or a pool of water is to insult the soul and thus invite disaster.

To most peoples who believe in a spirit and in an after

life, the land to which the spirits go and where they dwell in everlasting happiness is a fixed and definite place. In the ancient Egyptian "Book of the Dead," for instance, a ship is figured carrying the dead to another world. The Greeks thought that the dead were ferried over the river Styx by Charon—the river being composed of all the tears that had been shed in the world. Charon was supposed to charge a fee for his services as ferryman; therefore, when the Greeks buried any one they provided him with a small coin which they placed in his hand.

The same idea is found among the Chinese who furnish the dead with paper money and passports. We will consider this more thoroughly in our talk on gifts to the dead.

The ghost land or spirit land of primitive peoples, the happy hunting ground of the Indians, the Elysian Fields of the ancients, the Valhalla of the Vikings—all are equivalents of our heaven. The idea of a purgatory seems to have originated with the Greeks. They believed that if their dead did not have the fee for Charon they would be detained for a hundred years before being permitted to proceed. The belief in purgatory was adopted from the Greeks and made "an article of faith for Catholics by Pope Gregory the Great, about 500 A.D." The masses which are said in Catholic churches are intended to expedite the journey of the dead from purgatory to paradise.

Since the spirit was to continue in another life, and might some day return to the body, it occurred to the awakening mind of man that it was necessary to protect and preserve the body. The Marquesans, for instance, who locate the soul below the belt and the spirit world below the surface of the earth, take every precaution to protect their dead from being desecrated either by man or by animal. O'Brien says:

In the very old days the Marquesans interred the dead secretly in the night at the foot of great trees. Or they carried the bodies to the mountains and in a rocky hole shaded by trees covered them

over and made the grave as much as possible like the surrounding soil. The secret of the burial place was kept inviolate.

And O'Brien continues to tell us of a man of more recent times who

in the darkest night climbed a supposedly inaccessible precipice carrying the body of his young wife lashed to his back, to place it carefully on a lofty shelf and descend safely.

These precautions undoubtedly came from a fear of profanation of the dead. Among the Marquesans the belief was strong that if the body were injured the soul that fled from it would be injured, too. Therefore it was a custom among the tribes in early days, when invading the vicinity of a foe, to devastate the cemeteries. They believed that mutilating the corpse hurt the souls, and one of their first acts of violence in warfare was hurting the dead—even before hurting the living.

Primitive man must at first have groped pathetically with the thought of a "double," of another life, of a soul or spirit within him. Many interesting customs, born of the first crude notions concerning the soul, have come under our observation. Among the Ojibwas, for instance, "when a child dies they cut some of its hair and make a little doll which they call the doll of sorrow. This lifeless object takes the place of the deceased child. The mother carries it with her everywhere for a year." The belief is that the soul, or the spirit, of the child is transferred through the hair from the dead body to the doll.

The Chavante mother, on the Uruguay, believed that to eat her dead child was to regain the tiny soul. Therefore, among the Chavantes we find from earliest times a tendency to devour the dead children, either partially or entirely. The notion was that to bury the child without eating of it was to lose the little soul and never be able to retrieve it. We find this same custom, in modified form, existing among many of the savage races of Australia and of Africa—a bit of everyone being eaten,

not only the children. Among these people, however, the thought behind the eating of the bodies is to regain the strength, the power, or the knowledge of the person who has died. Cannibalistic warriors always fatten themselves upon their enemy, to gain some of the strength of the opposing tribe (see p. 51).

The ancient Scotch, Australians, Hebrews, French, and Aztecs—widely separated peoples—all appear to have had the custom of spreading dust around the body of a dead man to discover the footsteps of the ghost in the morning. It seems to have been a widespread notion that the ghost itself was invisible, but that it left traces if the wary were wise enough to find them. Thus was the dust left around a corpse, and if the merest suggestion of a footprint were found in the dust the following morning—well, there was proof that the soul had left the body, was there not?

The common notion that ghosts cast no shadow evidently originated in the belief that the soul was the shadow. This belief in the shadow soul is widely prevalent among savage peoples even to-day.

Another widespread belief, one which originated in antiquity, is that those who die a violent death become malignant spirits, endangering the lives of those who come near the spot. We speak of such a spot as "haunted." The mourners in the Andaman Islands shoot arrows into the jungle to frighten away these evil spirits. The Ahts burn everything that belonged to the one who died by violence, believing that the evil spirits dwelt therein. The fear of the evil spirits gave rise to the belief, which at one time became almost universal, that it is dangerous to venture near the spot where the dead are buried. Our fear of cemeteries, or rather our superstitious notion that cemeteries are sometimes haunted, no doubt traces its origin to the primitive fear of evil spirits.

The Chinese have always believed that the spirit of the dead leaves the body and travels to other lands. The

spirit of the man who has been murdered, however, is supposed to remain in the body until it has been avenged. Therefore it was the custom in China, and also among other peoples, to fasten the body of the dead man to the murderer, compelling him to go about thus encumbered for a stated period. They believed this a greater punishment than any other they could inflict.

Among the North American Indians we find a tendency to believe in a spirit which lurks for a while around the body, but finally goes to a paradise of happy hunting grounds where everything is provided without toil. There are handsome wigwams, fruitful fields, winding rivers, and fair weather all the time. We are told that in the ancient Ohio tribes it was customary to bore holes in the coffin to let the spirit pass in and out. The Iroquois left small holes in the grave for the same purpose.

The Mandans had an interesting method of burial. They wrapped the dead bodies in buffalo skins and exposed them on crossbeams or scaffolds, suspended at a height of about ten feet. There they were allowed to remain, safe from animals, until entirely decomposed. Then there was a wholesale burial—ten or twelve skeletons being buried in a single grave. Judging from their customs, the Mandans did not fear the dead as did other peoples, but evidently they had some belief in a spirit and in an after life.

In ancient Ireland it was believed that the souls of those who died abroad greatly desired to come back to rest in Ireland. It was therefore deemed the duty of relatives to bring back the body and lay it to rest in its native earth. And even then the soul will not be at rest unless the body is laid with its forefathers, not among strangers. Writers who tell of the manners and customs of ancient Ireland like to tell this story:

A young girl died of a fever while away on a visit to some friends, and her father thought it safer not to bring her home but have her buried in the nearest churchyard. A few nights after his return home, however, he was awakened by a mournful wail at the window and a voice cried, "I am alone! I am alone!" The father knew at

once what it meant, and prayed that the spirit of his dead child might rest in peace until the morning. And when the day broke he arose and set off to the strange burial ground, and there he drew the coffin from the earth and had it carried all the way back from Cork to Mayo; and after he had laid the dead in the old graveyard beside his people and his kindred, the spirit of his child had rest. And the mournful cry was no more heard in the night.

Preserving the Body.—The belief in a spirit which might some day desire to return to its earthly body inspired early man to make efforts to preserve the body. Thus burial, at first intended solely as a means of disposing of the dead, came in time to be a method of preserving the dead for the return of the spirit.

In Africa, for instance, the Loango people smoke their corpses to preserve them. The Congo Kaffirs bury their dead, build fires above the graves, and keep these fires burning for a month. Then the bodies are unearthed, smoked, and amid great ceremonies wound in cloth. The smoked corpse is placed upright, in the hut where the man died, and is left there for years. If a man happens to die while visiting a friend, his smoked corpse is brought to the friend's house and not taken to his own. The belief is that the spirit will return to the very spot where the man died, and that the body must be there to welcome it.

Embalming, for purposes of preserving the body, is very old. It was practised in ancient Egypt where the warm, dry climate assured its success. As one writer says, "Embalming would probably not succeed in climates less warm and dry than Egypt." The Egyptians were pre-eminent as anointers, and greased the bodies of the living and the dead. The custom of "glorifying by means of grease" is essentially African—and we find it prevalent to-day among many African tribes. Even the statues of gods were anointed by the Egyptians.

The Egyptians practised the custom of mummifying the body. The purpose of mummifying, of course, is to preserve the body as a home for the spirit when it should return to take up its abode in its rightful place again.

To mummify, the Egyptians extracted the brain and the intestines, cleaned out the body through an incision in the side, and filled the cavities with spices. The body was then sewn up and permitted to lie in salt for a period of 70 days. Then it was placed in gummed mummy cloth and fastened into its ornamental case. Sometimes instead of making incisions they injected cedar oil into the body by means of syringes. The poorer classes were not mummified but merely salted.

When cremation was introduced, the Egyptians made a substitute body from the ashes of the dead, or to hold them, thus creating a suitable habitation for the spirit when it should return. The Egyptians were not partial to cremating, however, and soon abandoned the custom. They buried their dead, anointed and embalmed the bodies, and made mummies of the men and women of importance. Even the bodies of sacred animals, like the black cat, were preserved and mummified.

Sometimes instances of natural mummification are brought to light, as during some very recent excavations in South Dakota. In the graves of the Arikara Indians, on the banks of the Missouri River, a mummified infant was found, evidently the child of some mighty chief who lived long ago. Mr. Stirling, who led and directed the expedition, says:

On no single adult that we found was there anything like the elaborate decorations with which this tiny body was weighed down. In his grave were two pieces of pottery that had probably been filled with food. Around his neck were a couple of elk's teeth. . . . He was further ornamented with a number of beads of stone, shell and copper, but it was the copper trinkets that accomplished the mummification. Copper is a natural preservative, though it turned the little red body green. Although the baby's flesh is somewhat desiccated, it is a striking example of a case of natural mummification—something that has never come to my notice before.

We find even in civilized life a desire to preserve the body after death. Coffins are advertised as being of "enduring granite" and vaults are built "to preserve the bodies

of those who once lived and breathed, who loved and were loved." The dead are still embalmed and every effort is made to preserve the body as long as possible.

Gifts to the Dead.—The general belief in early times was that man went on into the next world with as little break as possible, that his life resembled very closely the life in the tribe, and that therefore he would need his property, his valuables. Therefore, it was customary to bury material things with the body.

The religious aspect of funerals possibly originated in the belief that death is but a journey to another world, and that the dying expect to have ceremonies performed for them to expedite their travels and lessen the dangers of the journey. Among most savages, therefore, we find it customary to dance and feast at time of death for purposes of pleasing the spirit of the departed; to stamp upon the ground and frighten away evil spirits; to build sacrificial fires and so satisfy the fearful One who causes death. Religion made of these savage observances a ceremonial; and Christianity gave the ceremonial a new note of solemnity.

It was customary, besides preparing the soul for its wanderings by feasting, dancing, and chanting, to bury with the dead whatever would be needed to secure admission to the new world. We have already mentioned the fee of Charon, ferryman of the Styx. Buried with the Chinese are miniature sedan chairs of bamboo or paper (so that the soul may rest every now and then throughout its wearisome journey!) and also paper money to furnish *Lû-in*, or a passport, for travelling from this life to the next.

The firm belief in an after life is indicated by the custom of the religious Hebrews of the Near East who entrust the dying with messages to carry to the patriarchs and the prophets. Distinguished rabbis are given letters to carry to deceased friends. A similar custom is noticed among the chiefs and head tribesmen of Africa. It is customary

among these people to give messages or news intended for dead friends to slaves, and to kill them so that they will be able to carry the news to the other world.

Since the dead live again in another world they must be provided with food and necessities of life until they become accustomed to their new surroundings. Thus, among the Papuans, Tahitians, Sandwich Islanders, Malanans, Karens, ancient Peruvians, Brazilians, and countless others, it was customary to leave food and drink with the corpse. In Patagonia it was the custom annually to open the sepulchral chambers and reclothe the dead. This same custom is found among the Eskimo who, every year, take clothes as a gift to the dead.

Among the Kukis, the widow is compelled to remain for a year beside the tomb of her deceased husband, the family bringing food daily for her and for the spirit of the dead man. In the Mosquito tribe the widow is obligated to supply the grave of her husband with provisions for a year. Many of the North American Indians buried wampum, food, bows and arrows, useful utensils, and trinkets with the dead.

The Egyptians entombed with the dead everything that might be needed in the next life. Arms, ornaments, decorations, furniture, food—all go into the tomb where the mummy in its double coffin is to rest throughout the centuries. The wealthy Egyptians were buried with their slaves, that they might be certain of services in the next life. Frequently a child was buried alive with a dead parent, so that the parent would not be alone and a stranger in the future state. Slaves were placed in the great tombs of Egyptian kings before they were sealed for ever, and the legs of these slaves were cut off so that they could not possibly escape.

The Dyak head-hunters believe that every head they add to their collection means another slave in the next world. When one of their own people dies, they set about to secure a man's head, thereby sending a slave to serve the

deceased. The more powerful and important the person who dies, the more slaves are sent to join him.

In Russia it was formerly a general custom to place a pair of new shoes upon the feet of the dead, in anticipation of the long journey to be taken. The Ahts bury blankets with the dead that they may not be cold. At Reichenbach, in Germany, a man's umbrella and goloshes are placed in his grave even to-day. Until recently, in certain parts of Sweden, a man's pipe and tobacco pouch and a little money were buried with him.

During the early period of Christianity, the priest used to place upon a man's breast, as he lay in his coffin, a pass to the next world. This pass gave the man's Christian name, the dates of his birth and death, and was also "a certificate of his baptism, of the piety of his life, and of his having taken of the communion before his death."

The Chinese bury their dead with many gifts. They place in the coffin the "seat of the soul" called *Ling-tso-tze* (the ghost's slab). This is merely a paper tablet, like a large rectangular red envelope and it is supposed to contain the soul of the departed. The name of the person is written in great letters upon it. Beside this tablet, to the left, is placed a bowl of rice, in the centre of which is placed a hard-boiled egg with a hole pierced in its upper part. Two chopsticks are stuck into the rice or into the hole in the egg.

Many early peoples took wives with them into the next world. Among the Comanches, for instance, it was once customary to kill a man's favourite wife to accompany him on his journey. In the Congo region, and throughout practically all of Africa, wives were sacrificed at the death of men. In Polynesia and Melanesia widows were always killed. To-day the Polynesian widows are not killed, but they are obliged to mutilate themselves by making gashes on the face and the body. The Melanesians also mutilate themselves, and similar customs are found throughout Africa and Australia.

In certain tribes of New Zealand, the widow strangled herself when her husband died. Among the Crees the widow was usually sacrificed upon the pyre with her husband. We are familiar with the age-old custom in India of burning widows at the funeral of the deceased husband, —a custom which prevailed until very recently. In 1803 there were 275 women sacrificed on funeral pyres within thirty miles around Calcutta. In six months of 1804 in the same area the number was 115. (C. Buchanan, "Christian Researches in India.")

Among the Tartars, on the occasion of a man's death one of his favourite wives hanged herself. In Darien it was customary to inter with a chief all his concubines. In equatorial Africa, at Yourriba, four of the king's wives poison themselves when he dies; but the Hottentot women of Africa do not kill themselves, merely cutting off one finger to indicate loss and mourning.

In both China and Japan the custom of killing people to accompany the dead prevailed. The Japanese burned servants to accompany their masters. But later they substituted effigies for the real servants and burned these, permitting the men to live. It is interesting to note that on November 11, 1918, a band of people from Little Italy in New York marched to the Battery where they burned the Kaiser in effigy. This custom of burning in effigy originated with the primitives of antiquity who practised imitative magic and believed that they could injure their enemies by burning or destroying images of them (see p. 34).

Centuries ago the Chinese believed that the widow ought to kill herself at her husband's funeral. They regarded it as the only wifely thing to do, but made no provisions for the husband burning *himself* when the wife died. So accustomed did the Chinese women become to sacrificing themselves at their husband's funerals that they began to do it of their own accord, and it was no longer necessary to enforce the custom.

As late as 1857 the *Pekin Gazette* published the report of a decree which accorded a tablet to the memory of the wife of a prominent mandarin. Reporting the story, the *Gazette* told how the widow had poisoned herself upon hearing of the death of her husband in a battle against rebels, and asserted that the magnificent tablet was a fitting tribute to the memory of so noble a woman.

In January, 1861, two widows committed suicide at Fouchow in the presence of thousands of spectators. Not one person attempted to prevent the women from destroying themselves because of an age-old custom.

The natives of Dutch New Guinea have an interesting custom. They always place upon the grave, instead of a stone, a spade, so that if the corpse regains its soul and comes to life it can dig itself out.

In modern life, we still make gifts to the dead. We decorate the graves with beautiful flowers. We frequently inter with the body a favourite old jewel, a cherished trinket, a bridal gown or flower, excusing the deed as an act of sentiment. What we are really doing is instinctively observing the custom almost as old as death itself of burying food and belongings with the dead that they will not want in the future state.

Only the other day the newspapers carried a headline "Cash Put on Gypsy's Bier to Pay Debts in Heaven." The story was of the death of the King of the Gypsies, who drank muriatic acid by mistake and died. His relatives and friends, believing that his soul would presently leave the body and go to heaven, dropped coins upon the bier with a silent request that the money be used to pay whatever debts they might have in the other world. According to this report a considerable amount of money was buried with the dead king.

Mourning Customs.—Doctor Frazer, in an article in the *Journal of the Anthropological Institute*, calls mourning a disguise because it is the reverse of ordinary wear. It seems very possible that the ancients, fearing the return of the spirit that caused death, disguised themselves.

Among the Blackfellows the man smears his body with pipeclay when a death occurs and goes about furtively, looking always over his shoulder. Evidently he fears that if he is recognized as belonging to the same family as the deceased, the evil spirits will claim him, too. The women do not cover their bodies with the pipeclay, but they hang a chaplet of bones over the face. Most writers are of the opinion that:

Whatever may be the reason for wearing *crêpe* veils or clothes of special cut or colour during mourning, the pipeclay of the mourning Blackfellow or the chaplet of bones his widow hangs over her face look very much like disguises from the ghost.

In Melanesia the widow smears her body with mud and wears a costume of grass. This grass mourning costume covers her whole body, her face and head—a perfect disguise if there ever was one. In Gaima the men and women alike wear veils which cover them completely. It is more of a net than a veil, and is in the shape of a hood which is drawn over the head.

Women of the upper Congo have smeared their bodies with white clay upon the death of their husbands for countless centuries. Perhaps this was originated as a method of disguise from the spirit of the husband if it should return to claim her.

The Congo Kaffirs assume a mourning costume of black, achieved in this manner. A certain species of oily ground nut is roasted and then ground into a black paste. This paste is smeared over the whole surface of the body, giving to the naked Kaffirs a mourning costume of black. This, too, is regarded by most authorities as a form of disguise. Are we, who wear black in time of mourning, really observing a primitive custom originated for the purpose of frightening away spirits or concealing ourselves from them?

The *Encyclopædia Britannica* says that “originally special garb for mourning seems to have been intended to warn the general public that persons so attired were un-

clean." This was true among certain people and to a limited extent, whereas most early peoples practised the custom of disguise.

In ancient Rome, men in time of death remained at home and avoided all feasts and amusements. They cut neither the hair nor the beard. For a stated period they were "retired"—that is, they did not mingle with their friends and relatives, remaining only with the immediate family. We find this true of many other people of antiquity.

The Hebrews, for instance, believed that any one who touched a corpse was unclean and definite periods were stipulated during which that person was prohibited from mingling with others. It is even to-day customary with the Hebrews to wash the hands immediately upon the return from a funeral.

It is very possible that mourning was intended as a warning, as the *Encyclopædia Britannica* suggests. Savage peoples were strongly of the notion that death was contagious—that to remain in the vicinity of death was to be threatened with like fate. Therefore, those who were dangerous, by virtue of having been present at the time of death (the family, in other words) donned special clothes or in some way marked themselves tabu.

Thus, when death occurs in a family of Kaffirs, the family becomes unclean and unable to mix with others for a definite period. Among many savages who practise cremation, the ashes of the dead are carried around by the widow for two or three years, during which time she is avoided by everyone. In Melanesia visible signs of mourning are worn; among various tribes of equatorial Africa tattooing and mutilating of the body are practised for purposes of indicating proximity with death; the Andamanese disinter the body after it has been buried a certain time and wear the bones of the dead to indicate mourning, and while they wear these bones they are avoided by the others. Savage life abounds with countless customs of this nature, and it would be monotonous to consider them all.

But it is important to note that our custom of retiring from social life originated with these old savage customs of warning against mingling with those who have been present at death, and therefore liable to contaminate those with whom they come in contact. There was a very definite tabu upon mourners, and upon mention of the dead. Therefore, mourners went into temporary retirement—a custom irretrievably a part of our modern social life.

In India it was customary until recently for the widow to sacrifice herself upon her deceased husband's pyre. Now the widow shaves her head, gives away her jewels and valuables, retires from social life, and spends the rest of her life performing menial duties for the family of her dead husband.

The Egyptians shaved their heads in time of death and for a certain period abstained from mixing with their fellows. The Hebrews were "unclean" for a certain period during which they kept to themselves. There are countless examples of this same custom not only in savage life, but among the early civilizations.

There were many methods of determining the period of retirement, particularly of widowhood, since women were expected to mourn more than men. Among the Tacullies the widow is compelled to carry around the ashes of her husband for two years, during which time she may not marry. Among the Kutchin Indians, the widow takes all decorations from her body, and for a period of a year is obliged to remain near the body of her husband to protect it from animals. When the body is quite decayed and only bones remain, she may put on beads, ornaments, etc., and attract another suitor.

Among some Indian tribes of North America it was customary to cut the hair of widows and forbid them to remarry until the hair had grown again to its original length. Among the Chickasaws the widow was obliged to live a single life for three years. Other Indian tribes sacrificed the wife when the husband died; still others shut her

into a grave with him for a period of a year during which time her family was permitted to bring her food. At the end of a year she was allowed to mingle again with the others. The Navajo Indians protected their bodies with tar in time of death, believing that the evil spirits could not enter beneath the tar; and to protect themselves still further they caused the widow to live in retirement for a certain period. The woman was regarded as the exclusive property of the dead man, and his property was supposed to be influenced by the evil which had caused his death.

These periods of retirement and of widowhood, these countless prohibitions after death, were not meant solely to protect the others. They served also the purpose of removing all doubts concerning pregnancy and paternity.

We still practise retirement during mourning, and we still have very definite regulations concerning periods of widowhood and widowerhood. "The Book of Etiquette" says:

For three weeks after a bereavement, women seclude themselves and receive no visitors except their most intimate friends. After this they are expected to be sufficiently resigned to receive the calls of condolence of their friends and acquaintances. They themselves make no visits until six months after the death.

And later:

The length of the mourning period depends upon the tie which existed between the deceased and the bereaved. Except for an elderly woman whose husband has died and who never intends taking off black, the longest period is usually two years, the first in deep mourning, the next in "second mourning" during which time gray, lavender, purple, and white may be worn. This may be shortened to six months of deep mourning followed by six months of semi-mourning.

Black is to-day almost the universal mourning colour, because of its sombreness and because of the age-old traditions behind it. But in Japan and in China pure white is worn when mourning. In some sections of Africa red is the mourning colour, red paint being applied to the naked body. At one time yellow was the mourning colour of

queens, and we are told that "Anne Boleyn paid her respects to the memory of Catherine by putting on yellow mourning." This was only a fad, however, inspired by the French.

Parsons says:

The universality of human desire for symbolic signs of private emotions is ever astounding. The emotion of grief at the loss of relatives and friends by death has found in dress a fertile field for expressing this desire. Black, death's particular emblem, has been used for this purpose certainly since the early part of the 14th century. Chaucer and Shakespeare give occasional allusions to its use, particularly in the case of the widow.

He tells us also of a curious custom of giving away black gloves to be worn "in memoriam." In 1736 at the funeral of Governor Belcher of Boston more than a thousand pairs of mourning gloves were distributed. At the funeral of Andrew Faneuil three thousand pairs were given away.

But [he says] nothing seems more incongruous and amazing than the fashion of mourning rings, which were often of great cost. At one Boston funeral more than two hundred were bestowed upon friends. . . . All kinds of mourning jewelry was fashionable, particularly such as exposed a design made from the hair of the departed and where black enamel could also be used.

Concerning the mourning customs of the present day, "The Book of Etiquette" says:

Grief turns instinctively to the sombre garments of mourning for the slight measure of comfort they give. . . . Black fabrics for mourning should not have a shiny finish, nor should they be trimmed except in the simplest way. . . . A woman in mourning does not wear jewellery aside from the wedding and engagement rings. Dull bar pins when needed may be used. Handkerchiefs may have a black border or they may be pure white.

The Irish Wake.—A story is told of a rogue who, upon being led to the gallows on a Monday and seeing the sun begin to rise, remarked, "Yes, this week is beginning well!"

There seems always, in time of death, a tendency to re-

lieve the tension in some way. The savages feast and dance and sing in the face of the great mystery called death. In ancient Abyssinia it was customary, at about the time of Queen Sheba, to have "mourning bees." These were held every time a person of prominence died. The people would gather in a great circle in the village and from a low moan work themselves up into frantic exhibitions of grief. Yet this was a form of relaxation, a method of relieving the tension caused by fear and superstitious dread of the great unknown.

The Irish have their well-known "wake."

There is an old popular tradition that when St. Patrick was dying he requested his weeping and lamenting friends "to forego their grief and rejoice at his comfortable exit, for the better furtherance of which, he advised each one to take a drop of something to drink." This last injunction of the saint is in reverence complied with at every Irish wake!

The Irish wake was intended originally to prevent the dead man's soul from prowling around the homes of survivors—a relic of the primitive custom. It was found to relieve the tension of the relatives and friends who gathered in the midst of death, and the custom became a popular one. There is eating and drinking, dancing and music at the old-time wake. The name probably originated in the idea of being awake to watch the body and keeping the soul from doing mischief.

There is indeed no better way to judge a man's character or his personality than to be present at his death. Does he cringe? Does he meet the Unknown bravely, with a smile of farewell and faint smile of welcome? Does he regret his life? Does he die fully satisfied with his achievements? What does he say? What are his last words?

Compare, for instance, the dying words of two queens—Cleopatra and the great Elizabeth. Cleopatra's last sentence was addressed to the asp which she drew from a basket of figs and applied to her bosom. "Here thou art,

then!" she cried. But Elizabeth met death with no such fortitude. "All my possessions for one moment of time!" was her last sentence.

The Dying Words of Famous Men.—"I want for nothing but to die in the correct way," said Confucius, sage of China. And generations later Montaigne says, "There is nothing of which I am so inquisitive, and delight so to inform myself, as the manner of men's deaths, their words, looks and bearing. . . ."

The Roman consul under Claudius was condemned to die by his own hand. He hesitated, and Arria, his wife, was embarrassed by the hesitation. She seized the dagger from his hand and before he could stop her plunged it into her own breast. Calmly she withdrew the dagger, held it out to her husband and said, "It is not painful, Paetus." An instant later she fell dead at his feet.

It is related that Reverend Patrick Brontë, father of the famous Brontë sisters, determined to die standing on his feet. Although so weak that he could hardly see or hear anything going on around him, he managed to get to his feet, uttering his dying words, "While there is life there is will."

Anne Boleyn was condemned to be beheaded. As she stood before the headsman she clasped her fingers around her neck and said bravely, "It is small, very small indeed." Then she knelt quickly, and paid the penalty to Henry VIII.

George Miller Beard, distinguished American doctor and scientist, was eager to serve to the very end. His last words were, "I should like to record the thoughts of a dying man for the benefit of science, but it is impossible."

Lord Chesterfield, ever the polished gentleman and faultless host, closed his inspiring career with a typical sentence. "Give Day Rolles a chair," he said.

As Aaron Burr breathed his last, the one word "Madame" escaped from his lips. Whom was he greeting? Whom did he see? What last picture did he carry in his mind into eternity?

The great Beethoven was deaf for a period of more than twenty years before his death. His last sentence is pathetic, and one wishes with all one's heart that his dream has come true. "I shall hear in heaven," he whispered.

Rabelais, the dramatist, died with this sentence upon his lips: "Let down the curtain, the farce is over."

John Keats knew that he was dying, and he expressed his last thought in poetry—"I feel the daisies growing over me."

One is interested in the dying words of the glorious Louis XIV. Was he magnificent in life only, or could he be magnificent too when that life ebbed away? Was he brave, or was he cowardly? Louis died when he was close to eighty years of age, and he appears to have been spirited to the very end. Seeing everyone around him weeping, he exclaimed, "Why weep ye? Did you think I should live for ever? I thought dying had been harder."

The great Napoleon died in a fit of delirium during his exile. A thunderstorm burst over St. Helena and he jumped up crying, "Mon Dieu! The French Nation! Head of the Army!"

Would that some writer had been present at the guillotine during the reign of terror to jot down the dying words of those whose heads tumbled into blood-soaked bags! What eloquent sentences must have been uttered; what pathetic appeals from the women, what haughty sneers from the men—what bravery, and cowardice, and tenderness, and brutality, all blurred into one horrible massacre! There was the powerful Danton, standing before his executioner, thundering his defiance for all to hear: "You will show my head to the people; it will be worth the display."

Another kind of pathos in the dying words of Byron. Weary of life and of war, wasted with fever and with fasting, he breathed his last words at Missolonghi, and the echo has travelled all around the world. "Now I shall go to sleep," he said. And his eyes closed.

George Washington was the efficient executive to the

*"Bacchante."
MacMonnies, 19th Century.*

last. The remarkable poise which characterized his life career did not desert him at the end, and he was self-possessed as he said to his secretary, "I am just going. Have me decently buried, but do not let my body be put into the vault in less than two days after I am dead. Do you understand? It is well."

When John Quincy Adams was informed of his approaching death, he said, simply and calmly, "Thomas Jefferson still survives."

Like Napoleon, the famous "Stonewall" Jackson died in delirium. He had been shot accidentally by his own soldiers. His last words were, "Let us go over the river and sit under the refreshing shadow of the trees."

One reads with interest of the end of the gallant and handsome Sir Walter Raleigh, condemned to death by beheading. With complete ease of manner, showing neither fear nor resentment, but rather a faint amusement, he ran his jewelled finger along the headsman's axe and said, "This is a sharp medicine, but a sure remedy for all evils." A moment later his lips could speak no more.

The last words of Theodore Roosevelt are significant. A fitting conclusion to a life gloriously spent. "Put out the light, please," he said to his attendant, and as the room darkened a great light left the world.

The whole world is familiar with President Harding's last words, uttered to his wife who sat at his bedside and read to him. "That's good; go on, read some more."

And the last words of Woodrow Wilson will be immortal: "I am ready."

CHAPTER XVIII

CONCERNING CHILDREN

The primary end of marriage is to beget and bear offspring, and to rear them until they are able to take care of themselves. On that basis Man is at one with all the mammals and most of the birds.

—HAVELOCK ELLIS.

Man is like God in this, that he has the power of creating human beings.

—O. A. WALL.

*Search through the Bible from end to end,
You will find no verse so great as this:
"Male and female created he them!"*

—EDGAR LEE MASTERS.

"BE FRUITFUL AND MULTIPLY"

THE first law of the Bible is also the first law of life. Every instinct and impulse cries, "Be fruitful and multiply!" Sex itself is a device for the propagation of the species; and sexual gratification is Nature's great scheme for attracting man and woman to each other.

The instinct for reproduction is present in all mankind, from the savages who live promiscuously in the heart of the jungle, to the men and women who belong to a highly refined and subtle civilization. Havelock Ellis says:

Sex gradually becomes intertwined with all the highest and subtlest human emotions and activities, with the refinements of social intercourse, with high adventure in every sphere, with art, with religion.

But slumbering always beneath sex and the sexual instinct is the animal urge which has procreation as its sole end—the age-old urge to reproduce, to give life.

Far back in the dawn of life, the brute man wandered prehistoric wastes concerned solely with the grim business

of keeping life in his body. The beasts of the jungles and the elements of the heavens conspired against him. Sometimes there was food; more often, not. Sometimes there were warmth and comfort; more often there were rain, and cold, and an overwhelming dread of the unknown.

Then one day this brute man awoke and felt the warm sun bathing through every pore of his body. His tribesmen were already breakfasting on some sorry beast of the trail—a huge, hairy creature from whose side they tore great chunks of flesh. The brute man stirred in the sun and felt overpowered with a strange lassitude. Something spoke within him. He stretched his limbs. And suddenly, without warning, the blood began to pound through his veins at a terrific speed. His head swam. Reproduce! Reproduce! And almost without his realizing it he turned to look at the woman who sat beside him in the sun.

This primitive urge to reproduce sent its call across the universe, and its thundering echo vibrates still. The savage hears it as he dances wildly to the boom-boom of his tomtoms. The man of civilization hears it, but he chokes back his natural instinct to shout an answering challenge and soberly goes through the customary stages of courtship, love, marriage.

The sexual instinct is but a by-product of the great fundamental instinct of procreation. Man was attracted to woman because nature urged him to reproduce his own kind. Woman was attracted to man because every fibre of her body cried out for the child sleeping within her. Ellis says:

The erotic idea in its deeper sense, that is to say the element of love, arose very slowly in mankind.

Jensen tells us of a group of prehistoric men and women caught in the trap of a great forest fire. They escaped the flaming demon, which they knew through bitter experience they could not fight with their flint axes, by jumping into a swamp and sitting in it up to their nostrils while

the fire burned itself out. And then they emerged to begin their wanderings in search of another forest.

But meanwhile[says Jensen], their number had increased, for one of the women had had a baby, from fright and before its time, while they sat in the pool given over to death—no easy birth. Amid all the thundering noise of the fire and the doomed beasts, a dismal note asserted itself, the cry of a woman in birth-pangs, and soon after the feeble whimperings of a new-born babe announcing its entry into the world with wailing.

The little one came into the world half-drowned, the smoke of a disaster was his first breath, howls and heat his first sensations. . . . Happy was the mother to have got this little wretch, that was uglier than death, toothless as a senile but hungry as a leech; she made a nest for it of her arms and breast, hid it from the Man and kept it quiet with her mouth against its mouth, lest he should hate it and in an access of rage fall upon this new whining thing in his company. Weakened and devoted she stumbled on when they had to go, the last of the herd.

“Be fruitful and multiply!”

Early Love of Children.—The child was the tie that bound man and woman together. The love of offspring is inherent and instinctive in almost all living creatures. Nature has implanted in all mammals the desire to care for the young until they are able to care for themselves, provide them with food and the necessities of life, protect them from enemies and from dangers.

The infant whose birth Jensen describes on the preceding page grew into a straight little lad called Fyr. In childhood he played with a bear cub, had wrestling matches with a baby jackal. During one of these wrestling matches, we are informed that

The muzzle and eyes of an elderly serious mother jackal were watching a little way off in the long grass, and on the other side Fyr's mother stood on guard, equally anxious and wrapped up in her young one.

Love of the young—in the jackal and in the human! An instinct as old as life but new to every new generation that steps upon the shoulders of those who have gone before.

Prehistoric man welcomed children because "numbers were a consideration, especially at night, and for other reasons. Many yell louder than one, the greater the chorus the stronger their rights." Boy children were particularly welcome, for they grew into tall, straight, strong young men who could help in the hunt, who could wield battle axes when they were attacked.

Among savages in early life children were regarded as the chief wealth of the family. The more children a man had, the greater was his power. No savage young man was satisfied until he had a son of his own, for a direct heir greatly strengthened his position in the tribe, made him more important among his fellows.

The African Negro regards childlessness as the greatest disaster—an opinion he has had for many centuries. Among the Mayas disappointed couples prayed earnestly before their gods and made offerings to propitiate them. If their hopes for children were still deferred, they made sacrifices; and if again refused, they sometimes killed themselves. Among many savages we find the pronounced belief that to be childless is a disgrace. In Madagascar, to die without posterity is looked upon as the greatest misfortune that can befall a man.

An old Japanese proverb says, "Honest people have many children," and the Japanese always tried to live up to this maxim. The Chinese, too, believe in large families and in absolute filial devotion.

The Indian races are noted for the love and attention lavished upon offspring. The Crees, Chippewas, and various other Indians have a century-old desire for numerous children, and there are never gayer celebrations than when twins are born.

We find love of children existing among savages known for their brutality, as the Fijians, for instance, who are cannibals yet who seem to be greatly attached to their children, and the children to the parents. The young are carefully taken care of among the Tongans, although

occasionally an infant is sacrificed cruelly for the purpose of bringing about some important person's recovery.

The New Zealanders are not entirely guiltless of infanticide, but they take noticeably good care of the children whose lives they spare. One writer tells us that the fathers especially seem fond of their children. Among the Bushmen, love for their children unites the family throughout life. And among the Greenlanders, a people untouched by the influence of higher civilization, barbarous and cruel in many ways, we find bonds of filial and parental love as strong as any to be found among us.

The savage is a better man than he is usually painted, and we find the love of children and the realization of marital responsibilities even among peoples so crude that they still go unclothed and still believe the thunder and lightning to be demons crashing and thundering above their heads.

Despite the love of children, which seems to be inherent and natural in most peoples, there come to us out of the past tales so cruel and barbarous that they make us wonder whether the perpetrators were humans at all or beasts parading in the guise of man. There have been savages with fiery, child-eating idols—beast-men who fed infants to the furnace burning within their monstrous iron gods. There have been ignorant and superstitious barbarians who sacrificed children as peace offerings whenever it rained or thundered. There have been cannibals who lived on their own young, or upon the young of their enemies. And even in early civilizations we find appalling numbers of children sacrificed in infanticide.

The Egyptians, advanced though they were in many things, fond of their children if we read rightly the records they have left behind them, nevertheless were guilty of several cruel practices toward children. It was customary, for instance, to bury alive a child or two with a parent that had died, the reason being that the parent would need someone to wait on him, or her, in the next world. Others

took their children along for companionship—poor, helpless little tots walled into stone compartments alive with the dead body!

But luckily for civilization, love of the young and an instinctive desire to cherish and protect them, has characterized human nature from the very beginning, and became more and more pronounced with the development of man through the ages. The great mass mother loved her child in the beginning, fought bears and other beasts to protect it, starved herself no doubt to give it food, sat all day by the fire tending it, making clothes for it from the skins of animals, watching it as it crawled clumsily about like a little bear cub, kept always a careful eye on the jungle and the tiger that might at any moment spring from nowhere. The mass mother loves her child to-day, and the care and solicitude which characterized the primitive mother are still evident, though disguised by the niceties of modern life. There are now no bears to kill, no tigers to watch—only the social evils against which one must guard.

Across the great gulf of time which separates prehistoric savagery from glorified civilization two women clasp hands: the mother of yesterday and the mother of to-day. A golden thread stretches out across the ages and links their mother hearts together.

The Child and Marriage.—Many races do not consider marriage a true marriage until a child has been born. The child seals the marriage pact—makes the tie inviolable. We find this custom prevalent throughout Africa, Australia, and to a lesser extent among certain tribes of North American Indians.

It is apparent that in early life marriages were contracted for the sole purpose of bearing children. The earlier Greek poets spoke less of love and more of the glory of bearing children. The Romans of the Republic regarded marriage as the means for propagating the species and omitted love entirely from its significance. Among both the Greeks and the Romans marriages were

sometimes contracted for a year, but if they proved fruitful at the end of that period they were renewed and made permanent.

We recall that one of the chief blessings which Moses, in the name of God, promised the Israelites, was "a numerous progeny." The Israelites were very eager to have many children and it was a great unhappiness to Rachel that she was unable to bear a child.

And when Rachel saw that she bore Jacob no children, she said unto him, Give me children, and if not, I die. (Genesis XXX, 1, 2.)

There is an elaborate mythological tale, borrowed from the Scandinavians and now existing in fragments of German folklore, which likens a marriage without offspring to a world without sun. This thought is found not only among the Germans, but among many Aryan peoples.

Marriage is intimately connected with the child, for it is almost wholly for the benefit of the young that the male and the female continue to live together. This refers, of course, to primitive and savage life where there are no legal or religious ties to bind men and women together. We have seen in a previous chapter how the child influenced early customs of marriage—how monogamy was established because of the child (p. 206).

Even among the lower animals the natural instinct to protect the young, and supply food for the subsistence of the young, is strong. In primitive life it must have been the tie which bound man to one cave, one woman, one home.

In primitive life, men lived in tribes or hordes. Connected with each tribe were several women who lived promiscuously with the men. No individual marriage existed, and the children were apparently the common property of the tribe. This was in the very beginning while man was still wandering from place to place—a bewildered and humble nomad in a terrifying world.

There were no real kinship ties at first, other than the fundamental kinship between mother and child. A group

of children, growing into young manhood and young womanhood, traced their kinship through descent from a common ancestor, or claimed kinship through relationship to a common totem. This is known as artificial kinship.

In a later development kinship was traced through the father. When individual marriage became customary it was not difficult to regulate relationship, but in tribal or horde organization with no family ties, it was, of course, impossible to determine the paternal ancestry.

The father right in the child is interesting because it is the basis of the modern social system. It originated in early life when the father asserted his right over the right of the mother. The system of kinship, based upon male descent, introduced a more compact and permanent family organization. But we must not make the mistake of thinking that the father right existed universally or that it has prevailed uninterruptedly throughout the centuries. Throughout all Australia, Melanesia, and America in primitive times the mother right prevailed, and the children followed the mother, "taking their name from her and inheriting her property."

Mr. Dealey, in his "Sociology," says:

While the family is usually considered the unit, or fundamental group of society, the term family has had a different significance at different times. When mankind was emerging from animal conditions the family group probably consisted simply of mother and child holding closely together merely during the helpless period of infancy. The mother herself presumably provided for and protected her children, who as they matured would feel a sympathetic connection because of their descent from a common mother. This furnishes the type of so-called matriarchal, or metronymic, family made up of a mother, her children and her daughter's children, forming a natural kin.

The patriarchal family, which traces its natural kin through the father, is so familiar to our minds that it seems to-day almost the only natural social system. It has existed since the earliest times among the Caucasians, but developed gradually among most other races. By the be-

ginning of the Christian Era it was already an established custom or rule among civilized peoples.

The Child in Early Life.—Among the primitives children romped and played even as they do to-day. Indeed, the first two or three years of the child's life was similar to that of a child of corresponding age to-day, except, of course, that everything was relatively crude. The child was entirely dependent upon the mother for food and protection. It cried when it was hungry, slept when it was tired, crawled on all fours to catch shadows in the sun, blinked up at the clouds, cooed for hours at its fingers, its shell plaything, gazed out upon a strange and wonderful world. Omit the trained nurse and the inevitable "Care and Feeding of Children" and the life of the modern infant is not so far removed from this early existence.

There has never been an age so dark, or a people so barbarous, as to leave its children without toys. The first toys were probably polished stones, shells from the sea, beads strung on a bit of deerskin cut in a slender strip. An infant can be quite as happy with a rude stone as with a delicate ivory rattle. The rattle, by the way, is older than you would suspect and is said to have been invented by Archytas. He made painted clay puppets, representing human beings or animals, and put small stones inside of them to cause a rattling noise.

The Egyptians appear to have been particularly partial to dolls. They made dolls of wood with flat painted bodies, and made clever wigs for them of clay beads strung on thread. Examples of Egyptian dolls, in the British Museum, are more than three thousand years old.

The Eskimo baby has a doll, too. She dangles a lovely carved whalebone doll—the envy of any little pickaninny of far-away Africa who has only a doll of carved wood. In Mexico little girls have had funny little dolls of baked clay since the earliest times, and prefer them even to-day to the "pale dolls" sent by the United States.

The dolls of ancient Greece and Rome had well-shaped

heads and jointed arms and legs which moved by means of strings. Some interesting dolls were discovered in the catacombs and are now in the Museum Carpegna.

Besides dolls, small wooden carts, houses, ships, and other toys made of wood, leather, and bronze have been found. The fact that they have been found on children's graves and are absolutely absent from the graves of adults proves that they were toys.

Among the Indians of North America the baby was placed in a cradle and suspended near its mother from a tree bough. Cradles existed not only among the early Indians, but are found among primitives in widely separated localities. Most of these antique cradles consist of a flat board with buckskin or basketwork at the bottom and a strip of the buckskin or other material at the top to go around the mother's shoulders. While on the march, the cradle is carried suspended down the back. There have been many kinds of cradles, some of which are illustrated.

The Indian mother sang lullabies to her infant—another custom prevalent among most of the ancients. The child was taught that he must not cry; each time he began to do so his mother's hand was placed over his mouth. In early times it was dangerous to permit the child to cry, for it might attract enemies or animals. Almost from the day of its birth its whimperings were stifled, so that when the child grew up it could bear almost any pain without complaining.

Being bound constantly as an infant to a flat piece of wood or birch bark, the Indian boy grew up tall and straight. He learned to help his father in the hunt. He wrestled with other youths, ran races, tested his skill in imitating the sounds of the birds and beasts of the forests.

The Indian girl was taught all the arts of her mother—cooking, tending the fire, making baskets, weaving, painting pottery. She went to the stream for water, carried wood for the fire. She was prepared almost from infancy to become the drudge her mother was before her.

Among the Africans, and indeed among most savages in early times, the boy was trained from an early age to hunt, fish, tend the fire, make implements. At the age of fifteen or sixteen he was initiated, amid great ceremonies, to the secrets and traditions of the tribe. He was entrusted with the tribe's most cherished myths, magical rites, and traditions, and informed concerning his duties as a man. Then two or three of his teeth were knocked out, or he was tattooed, or he was obliged to take part in some weird dance, and he was accepted as a man.

Many peoples all over the world practise the custom of knocking out the teeth of young children. When asked why he knocked out the two front teeth of his children, the Australian Dieyerie replied that Muramura, a good spirit, disfigured the first child in this manner and was pleased with the result. Therefore he commanded all of his people thereafter to do the same to their children. The custom may have had a religious origin, but more possibly it originated in the primitive notion that to sacrifice a part of the body insured the safety of the rest.

In Rhodesia, for instance, if a baby's first tooth happens to show its tiny white tip in the infant's lower jaw, that tooth is instantly drawn out by the parents. They believe it to be an indication that the spirits for some unknown reason are displeased with the child, and they draw out the tooth to avoid injury to the infant.

The girl in primitive life always remained with the mother, helping prepare the food and the skins, until such time as she was old enough to be sold or exchanged in marriage. Sometimes she was stolen when still a child and sold either into slavery or into marriage.

A study of the child in early civilizations is interesting, and the subject offers opportunity for much fascinating discussion. But we can barely touch upon it here. In Egypt children of five and six years tended the sheep. All children, boys and girls, were expected to wait on their parents, and absolute obedience was required.

The Greeks and Romans practised infanticide to a startling degree. Female children were particularly undesirable. Yet both the Greeks and Romans are known to have practised adoption accompanied by a ceremony of mock birth. These adoptions appear to have been very frequent.

One authority says:

The Spartan government was founded on the principle that the life of every individual from the moment of birth belonged absolutely to the state. The elders of the city inspected the newly born infants and ordered the weak and unhealthy to be carried to a nearby chasm and left to die. By this inhuman practice Sparta made sure that those who were physically fit should survive.

Children who were allowed to grow up were brought up under an iron rule. At the age of seven the boys were removed from their parents and organized into small bands over which the strongest and most courageous were made captains. They slept in public dormitories, on hard beds of rushes. They ate of black broth and coarse, meagre fare. They were drilled each day in gymnastic and military exercises. Their muscles became like iron and they learned great endurance.

The Japanese have always been very fond of children. They have a "Dolls' Festival" for the girls, and a special "Boys' Festival," both being of great antiquity. The "Dolls' Festival" takes place on the third day of the third month of the year, and it is observed in every home where there is a little girl who loves dolls. The girls bring out all their dolls—some representing knights, some dancers and clowns, some boys and girls—and place them in a great heap on a row of shelves arranged like a miniature grandstand. They invite one another to come in and see their dolls, and there is much merrymaking.

On the fifth day of the fifth month, the Japanese boy has his particular holiday. Instead of dolls, pieces of armour and figures of warriors appear on the shelves. In the garden before the house a pole is set up at the top of which flutters a huge cloth carp—that fish being the symbol of the boys' festival.

The Chinese, like the Japanese, are extremely fond of

children, but they demand the utmost respect and absolute obedience in all things. Confucius taught that a disrespectful or disobedient child was a disgrace and misfortune to its parents.

Race progress, of course, is intimately involved with the quality and nature of child-training. Civilization has always received its greatest impetus in those localities where children were taught the wisdom of their elders, where they were carefully trained for manhood and womanhood.

The Jewish religion, being sustained through literature, inspired the first efforts to provide elementary education generally for all the children in the community. In his "Ancient Israel From Earliest Times to A.D. 70" Fletcher H. Swift gives an interesting and instructive account of these first efforts, and of how the literature-sustained religion of the Jews supplied the impetus.

By way of contrast, it is interesting to meditate upon the modern community kindergarten. Friedrich Wilhelm August Froebel (1782-1852) believed that it made a tremendous difference in the life of an individual if he were taught the wrong things before the sixth year. So important did he believe the teaching of young children that he opened a school in a little village called Blankenburg, which is in Germany. This was in 1837. Two years later he named this institution "Kindergarten" (garden for children). His educational theories proved epoch-making, for in a short time all England, France, and the United States knew of his methods. To-day there is scarcely a corner of the civilized world that does not have its Kindergarten for the youngsters.

Primitive Notions Concerning Birth.—The source of life must have been as puzzling to early man as the mystery of death. How did the children come? What gave them life? Did some good spirit breathe the spark of life into their tiny bodies? Or did they just awaken, as man awakens from sleep?

As Robinson points out:

In the beginning man did not know how children came, for it was not easy to connect a common impulsive act with the event of birth so far removed in time.

It is doubtful whether prehistoric man realized in the beginning that he had anything to do at all with the miracle of birth.

Jensen's story of the birth of Fyr, part of which is quoted at the beginning of this chapter, gives an excellent picture of the birth customs of those early times. The child came into the world unannounced, unexpected. Only the mother knew of the tiny voice that whispered to her, but even she did not know what was happening.

One day the woman would feel tired, and heavy, and suddenly the pangs of birth would grip her. Dropping back behind the horde on the march, she would deliver a child to life. The cry of the woman in birth-pangs, the whimper of a new little life—and the horde realizes that another has joined their numbers. But how did the child come? What was the mystery? Who sent it? They do not know, but they accept the little parcel of life as only a few days ago they accepted the grim visit of death.

Out of the early speculations of savage man to solve the mystery of birth, there evolved many mythical explanations, survivals of which are seen in the nursery tales told to children. Most familiar of these tales is that which concerns the stork.

An old tradition, so old that its origin is buried in dim antiquity, is that the stork brings good luck. An old belief also is that the coming of children is good luck. Somehow the two ideas were united—possibly because storks were frequently seen at times of birth and the superstitious believed that the bird was the good-luck omen which presaged the infant's arrival. Thus would evolve the custom of explaining the mystery of birth by advancing the mythological explanation that the stork brought the children. When man realized that this was untrue, the

tale was retained in folklore and tradition, and gradually became a universal nursery explanation of birth.

Some writers advance other theories concerning the origin of the stork fable. One of our authorities, for instance, says that the stork symbolizes "filial piety" by reason of the care and solicitude it exercises toward aged storks. As defined by Confucius, "filial piety" means, fundamentally, the carrying on of the aims of one's forefathers. "It is not improbable that this notion of doing as our fathers have done is the explanation of the nursery lore that it is the stork who brings the babies."

Still another theory is that the bennu, a sort of heron, regarded as the emblem of Regeneration among the ancient Egyptians, gradually came to be mistaken for the stork. Among the Egyptians, the bennu was supposed to symbolize or betoken the re-aring of the sun, a thought easily connected with birth. The stork may have been substituted for the bennu in later interpretations of the tradition.

The Minnetarrees of North America have the curious old myth that there was no earth at all, in the beginning, only water. The "Never-Dying-One" sent a great red-eyed bird into the waters to bring up the earth in its beak. The stork bringing a new little life may in some way be connected with this fabulous bird carrying the earth—all of life—in it bleak. (See p. 18)

The evolution of the stork myth from an actual explanation to a nursery fable would have been expedited by the fact that the stork lives on roofs and chimneytops—a thought which would suggest itself to the mother when a child asks where the new baby came from. "The stork brought it, my dear! Brought it in a nice little bundle and dropped it down the chimney!"

When man had advanced sufficiently to have acquired the ability to reason logically, he began to connect birth with the sexual act. The generative organs, being the obvious physical basis for procreation, were venerated.

Thus originated the Phallic religion—a primitive religion based wholly upon sex and sex worship.

But man was for many centuries afterward wholly in ignorance of gestation, of the mystery and the processes of begetting and conceiving. When he discovered his own importance in the matter, his ego became inflated and he decided that he alone was responsible for the new life. The woman had no soul; he had. Therefore it was he who created the life, originated the new little soul, and the woman's body was merely the shell through which the infant entered the world. This gave rise to the custom of La Couvade, which we shall presently discuss.

Three thousand years ago the nature of gestation and the process of birth appear to have been fairly well understood. We find ample proof in the Bible that the ancient Hebrews, Egyptians, and their neighbours knew and understood the natural phenomenon, the miracle of birth. We read in the Bible, for instance, that

God said unto Jacob, Israel shall be thy name. . . . *Kings shall come out of thy loins.* (Genesis XXXV, 11, about 1732 B.C.)

(O. A. Wall explains that "loins" in this connection is a translation from the Hebrew word meaning phallus or genitals.)

Anaxagoras, a Greek philosopher who lived about 475 B.C., taught that

the embryo was formed entirely from the "seed" of the father and that the mother merely furnished the soil in which it grew and developed. This theory was not new. Anaxagoras merely gave it more definite expression and made it generally known and popular among the Greeks and the successors to Greek science.

Pythagoras, Democritus, Aristotle, Diogenes, Mohammed, Athenæus, Galen, and many others whose names are familiar, advanced theories during their lifetimes concerning the process of gestation and birth. Each had a different theory, each another twist of thought. It was

not until a fairly recent time that science and medicine accepted any definite views concerning the subject.

It is interesting to note that the Chinese have for a long time regarded the child as one year old at birth, and two at what we call the first birthday. The period of gestation is counted as one year.

La Couvade.—Among many savage peoples it was believed that the child emanated from the body of the father, and that the mother merely nurtured it. From this belief came the custom of *La Couvade*. It is prevalent in Africa, Australia, and was at one time widely prevalent in Europe and among the North American Indians.

The custom of *La Couvade* requires that the father, at the time of birth, retire to bed as though it were he, and not the woman, who was delivering the child. Dobritzhoffer tells us that among a certain savage people of South America :

No sooner do you hear that a woman has borne a child, than you see the husband lying in bed, huddled up with mats and skins, fasting, kept in private, and for a number of days abstaining religiously from certain viands; you would swear it was he who had the child. . . . I had read about this in old times, and laughed at it, never thinking I could believe such madness, and I used to suspect that this barbarian custom was related more in jest than in earnest, but at last I saw it with my own eyes among the Abipones.

Brett, in his "Indian Tribes of Guiana," says:

"On the birth of a child, the ancient Indian etiquette requires the father to take to his hammock, where he remains some days as if he were sick, and receives the condolence and congratulations of his friends. An instance of this custom came under my own observation where the man, in robust health and excellent condition, without a single bodily ailment, was lying in his hammock in a most provoking manner, and carefully and respectfully attended by the women, while the mother of the new-born infant was cooking—none apparently regarding her.

The name *La Couvade* has been given to this peculiar custom by Professor Tylor. One authority, Bachofen, compares this custom with the symbolic pretense of birth

practised in Greece and Rome as rites of adoption. He says that among various tribes La Couvade is the legal form by which the father recognizes a child as his. In other words, it is a symbolic custom through which the father acknowledges his paternity. This explanation of the custom is supported by Professor Tylor.

Isn't it barely possible, in primitive life, that man in his egotism believed that it was his own flesh and blood, his own bit of life that was being born through the woman? After all, it was a pretty widespread notion that woman was only the shell through which the child was born. It seems a plausible explanation of the curious custom of La Couvade.

The Miaos explain the custom in a manner of their own. Recognizing the husband's duty, they explain that "the husband goes to bed for forty days because of the principle that he should bear the same hardships as his wife." Others explain the custom as one intended to protect and preserve the infant—in other words, fooling the evil spirits who lurk in the home.

There are some who connect this custom of La Couvade with the world-wide belief that the conduct of the mothers before and after birth affects the child. For instance, the Hottentots believe that if a pregnant woman eat lion flesh or leopard flesh, the child will have the characteristics of the animal eaten. In European folklore there is an old superstitious notion that if a pregnant woman step over a grave her child will die.

The custom of La Couvade is still observed in Guiana and elsewhere in the savage world. Even in rural England there seems to be an obstinate belief that the birth of the child affects the husband. There is no trace of this custom, however, among educated and civilized peoples.

The Practice of Infanticide.—A great blot upon the history of the two early civilizations, Greece and Rome, is the practice of infanticide which they carried to extremes. Vast numbers of infants were sacrificed to this inhuman custom.

Female children were undesirable to the Greeks, therefore they killed many of them in infancy. Boy infants were deserted, left to perish, if they were weak or sickly. The Romans permitted only strong and healthy children to grow up. For more time than we like to think the custom of destroying undesirable children existed among the Greeks and Romans, but under the Republic the abuses of paternal authority were checked. With the coming of Constantine infanticide was checked even more, for the father who killed his child was declared a murderer.

Infanticide was practised also by many savage peoples. It was particularly prevalent among the Asiatics, and was at one time common in China. In ancient times it was customary to show a new-born baby to the father, who decided whether or not it would be permitted to live. Wall says,

Especially were girls thus killed, because they were as expensive and troublesome to raise as boys, and when they were old enough to repay for this trouble by labour, the labour went to a stranger, the husband.

But other writers assure us that there was a widespread prejudice in favour of killing boy infants rather than girls. The Abipone mothers, for instance, spared girls oftener than boys "because their sons when grown up would want wherewithal to purchase a wife, and so tend to impoverish them, while their daughters would bring them in money by their sale in that capacity."

Among the Australian natives are many tribes accustomed to destroy infants born malformed or weakly. They also kill one child when twins are born—usually the smaller or weaker one.

The excuses offered for killing burdensome children are many and varied. Some savages offered children to their gods, to propitiate them—and incidently reduce the economic burden. Deformed and imperfect infants were almost invariably put to death. Among the prolific races, cannibalism existed no doubt because the population was

a menace to existence itself. The Maoris who practised infanticide offered the excuse that they killed children to avoid the murder of men. In other words, they practised infanticide in preference to cannibalism.

One writer says:

Infanticide was in some cases a device forced upon a group of men to adjust their numbers to the available food, or for security against enemies. The first infanticides were probably practised on the march. The mother, unable to keep up with the march and her burden, would be ordered to throw the child away or remain behind herself.

In modern life, the custom of leaving an undesirable child on a doorstep or in the vestry of a church has replaced the savage custom of infanticide.

There are, however, many savage tribes absolutely guiltless of this cruel practice. The Aleuts, for instance, regard child murder with horror, and believe that to practise it will bring disaster upon the whole village. The Blackfeet believe that women who have been guilty of infanticide will never reach the "happy mountain" after death. The story is told of a Bakundu woman in Africa condemned to death for the murder of her infant. It seems strange that in barbaric Africa there is not one district noted for the destruction of infants.

Baptism and Christening Customs.—Christening as we know it had its origin in the rite of John the Baptist. He belonged to a sect that believed that immersion in water would "wash away all sins and prepare the neophyte for the kingdom of God."

Mr. Picart, in his "Ceremonies and Religious Customs" says that baptism is

a sacrament instituted to wash away original sin, and all those actual ones we may have committed; to communicate to mankind the spiritual regeneration and the grace of Christ Jesus; and to unite them to Him as the Living Members to their Head.

There are two methods of baptizing—by immersion and by ablution. Immersion only was used until the time of St. Gregory, and then ablution became the custom.

To-day in most cases just a few drops of the water are sprinkled upon the child's head.

The customs of baptism are based upon various ancient rites and ceremonies. Purification by water, for instance, forms "an integral part of Malay customs at birth, adolescence, marriage, sickness, death and in fact at every critical period of the life of a Malay." In the Congo the natives sprinkle water upon a new-born child—a custom they have observed for ages. Everyone who wishes to indicate a friendliness toward the child casts a drop of water upon it. The custom of immersion for purposes of purification exists among many savages to-day and can be traced far back into antiquity.

The practice of giving a name to the person baptized is very old. The ancient Greeks appear to have had both baptizing and naming customs, as we have this detailed information concerning the ceremony.

On the fifth or seventh day the infant went through the ceremony of purification; the midwife holding him in her arms, walked several times around a burning altar. A festive meal on this day was given to the family. The door was decorated with an olive crown for a boy, with wool for a girl. On the tenth day after its birth the child was named and another feast took place. This ceremony implied the acknowledgment, on the part of the father, of the child's legitimacy. Friends and relatives presented the infant with toys of metal or clay, while the mother received painted vases.

Name-giving has always been regarded as a serious and important business. Throughout almost all grades of culture name-giving is achieved with ceremony and solemnity, with rites and impressive observances. The Red Indians, for instance, hold name-giving in such importance that they always consult the medicine man concerning the correct procedure. Usually the child is not named until some feat of strength in early childhood, some accident or some personal peculiarity, determines the name for him.

A Zuni boy is "initiated" any time after his fourth birthday. Before this time he had answered simply to

the name of "baby." Now he is given a name. At the ceremonies there is a "godfather" who breathes upon a wand which is then extended to the child's mouth. The authority who tells us of this Zuni custom refers to it as a prototype of baptism.

In Nias, men take new names at marriage. A Haida youth changes his name four times during his lifetime. The Iroquois receives a new name at puberty. Among the Quojas and Guinea when a boy is named the father parades the village armed with bow and arrows and sings constantly, to frighten away evil spirits and to drown the sound of the boy's name so that the spirits cannot overhear and use it.

This fear of having the name heard and used injuriously is widespread among savages. The Gillsland blacks object strongly to let any one outside the tribe know their names, lest their enemies, learning them, make them "vehicles of incantation and so charm their lives away." This is on the principle of imitative magic.

In Abyssinia the child has two names given him, one for common use and the other to remain a secret. This is true among various savage peoples, and was true also in ancient times. The child was supposed to be known by one name to the supernatural powers in the other world, and if the enemy knew this name he could harm the child. In savage life one is rarely addressed by one's real name, for to do so is to invite danger. Among the Barea not even a wife may mention her husband's name. We still find a reluctance to reveal the name among children in modern Europe, sometimes even here in the United States.

There is an interesting method of securing safety by spreading a newborn child's identity over a number of children. In the Kei Islands, after naming, the parents entertain all children of the vicinity. The same custom is found in Ceramlaut. In Amboina, shortly after birth, three to five children are brought into the birth chamber and there feasted.

It seems to this author that customs such as these would have originated the practice of giving birthday parties.

Another interesting custom is observed in New Zealand. It appears that after baptizing an infant the New Zealanders forced it to swallow pebbles, "so that its heart might become hard and incapable of pity."

The godfather and godmothers, in Christianity, were intended originally to represent the church which offered the child to Christ to baptize. But godparents are found also in primitive ceremonies and among savage peoples.

"Parental anxiety for the child's safety, combined with the primitive impulse to shift responsibility, as the best way of meeting it, is the *raison d'être* of godparents." The godparents in primitive thought are proxies for the real parents, and both sets of parents are supposed to represent the children. The underlying principle of the custom is that a set of "artificial parents" lessens the responsibilities of the real parents. Many savages believe that the child acquires its characteristics from the godparents. Even in European folklore there is a common belief that the child is affected by the appearance and characteristics of its godparents, and also of those whose names it bears.

We find the custom of godparents among the Mayas, the Caribs, and the Japanese. In savage tribes scattered throughout Africa we find the peculiar custom of pretending that another man and woman had the child, not those to whom it has really been born. This other couple dance, shout, and pretend to be extremely happy. They receive gifts and act for all the world as though there were a new little life in their hut. The purpose of this custom is to confuse the evil spirits who may have come to do injury to the child.

In Altmark godparents are given bread and cheese to divide between themselves. This custom of making the godparents a gift of some sort is widely practised in Europe. In early times the gift usually took the form of

Latona and her children, Apollo and Diana. William Henry Rinehart, 19th Century, American.

food, but later the food gifts were replaced by trinkets, and later still, by jewels.

The custom of gifting the child is more prevalent and survives with us. Among many savage tribes we find the tendency to present the child with something, even if it is just a beast's claw, said to ward off sickness. In early Europe it was customary to present the child with small pieces of money, salt, bread, and cheese. We suspect that the bread and cheese gifts were for their own consumption! These gifts, according to an old superstition, were to insure the child money and food throughout life.

The familiar gift of a coral with bells has its origin in an ancient superstition. According to Pliny, coral was anciently regarded as an amulet against fascination, and therefore it would keep the evil spirits from bewitching the child. It was also thought an excellent device for preserving the teeth. The bells on the coral were intended to frighten away the spirits, and during the early stages of Christianity it was customary to have these bells blessed by the priest.

In mediæval times the custom of presenting the child with "Apostle Spoons" was practised. These spoons were usually presented by the godparents. They were of silver gilt, the handles terminating in figures of the apostles, each with his distinctive emblem. Sometimes single spoons were given, bearing the figure of the patron or name saint of the child. But more frequently the spoons were presented in sets. The complete set included twelve spoons, but the wealthy included an extra one, larger than the others, with a figure of Christ on it. Complete sets of the thirteen Apostle spoons are very rare.

At about 1665 the custom of presenting the child with these spoons began to die out. But by that time the phrase "born with a silver spoon in its mouth" had become a familiar metaphor for children born to wealthy parents. The child of poor parents was "born with a wooden spoon in its mouth."

Names and Their Meaning.—One of the oldest methods of name-giving is from some event taking place at the time of birth, or some striking characteristic of the child displayed a little while after birth. For instance, in the Bible we find that Rachel, dying in childbed, called her child Ben-oni, meaning “a son of sorrow.” Later the father changed the name to Benjamin, “son of the right hand.”

Among the Indians of North America, among the Mordvines of the Caucasus, and among many savage peoples, the name was determined by accident or by whim. A thunderstorm at the time of birth, a tiger lurking in the vicinity, any peculiarity of weather or of season was adapted into a name for the child.

We are to-day born with at least one name all ready and waiting for us, but this is a fairly recent custom. Until about the 10th century A.D. names were given after birth and there was no so-called “family name” by which all members of the family were known. It was between the 11th and 16th centuries that “our modern nomenclature established itself in the more populous and civilized European societies.”

The custom began with the nobility. Toward the close of the 10th century, members of nobility began to call themselves after their ancestral seats. For two centuries the custom persisted, and then we find citizens patterning themselves after nobility—proudly adopting the names of their trades. These names were handed down from father to son.

An investigation into the personal names of people would be exhaustless; but it will be interesting to the reader to give here just a few examples to indicate how names were originated.

The custom of adopting the name of the trade was prevalent in England during the 12th and 13th centuries. There is a family in Sussex, for instance, which has carried

on the trade of weaving as far back as the traditions of the family extend. The family name is Webb.

Our most common surname, Smith, is a trade appellation. During the Middle Ages the smith supplied many of the mechanical needs ordinarily required by the people. He was everywhere. Almost every little community had its smith. Therefore the smith has left a great impression upon our nomenclature, and we find a vast number of Smiths in England and the United States.

The name Johnson indicates a man who had no distinguishing characteristics of his own, no definite trade, nothing to provide him with a name. He was simply the colourless *son of John*. But he who bore the proud name of Smith was somebody. He was *the smith* of the locality.

The origins of such names as Tailor or Taylor, Cooper, Barber, Baker, Carpenter, Clerk (Clark), etc., are obvious. Like Smith, they suggest the trade of the person they represent.

The relationship of son was variously expressed. Johnson is but one example. Thomson, Jackson, Wilson are names of the same type. The original forms were Tom-his-son, William-his-son, etc. Among the Anglo-Saxons and Scandinavians, the suffix *ing* also indicates sonship, giving us some names as *Willing*, son of William, *Godding*, son of Godwin, *Henning*, son of Henry.

In Ireland the O' before a name, and the Mac or Mc before a name in Ireland and Scotland, are equivalent to the *ing* among the Scandinavians. Thus O'Brien is the son of Brien; MacCarthy meant originally the son of Arthur. Sometimes the name was derived from the trade or profession, and the prefix added, as for instance MacPherson means the son of the parson; MacNab indicates the son of the abbot.

The Norman French express sonship through the use of Fitz. Thus Fitzroy is the son of Roy; Fitzsimmons is the son of Simon.

Such names as Marshall, Stuart, Cleaver, etc. are de-

rived from the occupation of the man to whom the name was first given. For instance, the Stuarts at one time had an ancestor who was a steward. The Marshalls had an ancestor who was a marshal. The people whose surname is Cleaver or Claver have for their forefather the clavinger, or keeper of the keys.

Then, of course, there are the many place or country names. A Scotchman coming to live in England would be known as the Scot. Hence, in time, the surname Scott applied to him and to his family. Wallace originally indicated a Welshman—he who came from Wales. In early times, newcomers to the golden land called America discarded the old, hard-to-pronounce names which they brought with them and adopted such names as Strange, Newcomb or Newcome, Travellers or Travers, etc.

Every name has its own story, and every story its different, fascinating. One picks up the thread of a name and follows it back over the centuries to its source. Sometimes there is a knight at the end of the thread, holding his banner high. Sometimes there is a wanderer at the end of the thread, crossing a great, wide ocean to reach an unknown land. Always there is some one person who has given the name its significance.

To-day cannot forget yesterday, for the one is linked eternally to the other.

CHAPTER XIX

POPULAR SUPERSTITIONS WITH SOME CURIOUS CUSTOMS AND MANY MISCELLANEOUS ORIGINS

The savage is very close to us indeed, both in his physical and mental make-up and in the forms of his social life. Tribal society is virtually delayed civilization, and the savages are a sort of contemporaneous ancestry.

—WILLIAM I. THOMAS.

Few of us take the pains to study the origin of our cherished convictions; indeed, we have a natural repugnance to so doing. We like to continue to believe what we have been accustomed to accept as true, and the resentment aroused when doubt is cast upon any of our assumptions leads us to seek every manner of excuse for clinging to them.

—JAMES H. ROBINSON.

THE BIRTH OF SUPERSTITION

ONE of the oldest of human instincts is fear. Man was cradled in a world of bewildering hostility, and he saw danger lurking everywhere around him. Smouldering craters belched fire before his frightened gaze. The thunder crashed in terrific bolts above his head. The night sky winked at him with thousands of silver eyes. And man was afraid. In this primitive chaos his very shadow seemed a grim spectre that stalked by his side. The whole world was peopled with fiendish creatures of his own imagining.

For man felt long before he reasoned. The thunder sent him cowering to the farthest corner of the cave. The stars filled him with a vague unease. The gnarled, twisted trees in the forest, and the grotesque, sun-patterned shadows that they cast upon the ground bewildered and terrified him. He could not explain them; he did not know what they were. Be he *felt* weak, and powerless—and afraid.

Primitive man groped about in a world of bewildering hostility. The very shadows trembling upon the ground filled him with terror.

Out of this fear came the germ called superstition. The germ grew, and multiplied, and spread. It eased the fear-stricken primitive mind. It founded the first crude religions. It moulded mass thought into strange ways of custom and belief. It swept out across the whole of humanity, seeped through the barriers of civilization, found its way even into advanced thought and advanced religions, became a definite part of man's personality.

William J. Fielding says: "Before we have the power to love or hate or comprehend, we are *able to be afraid*." The observant notice that the first emotions a child has are those of fear and surprise. And so it was with man in early life. What he did not understand he feared—and there was much that he did not understand (see pp. 21-22).

Thousands upon thousands of magic practices and superstitions have been evolved since the first dawn of superstitious fear, all with the idea of warding off danger, of propitiating angry deities, of inviting better fortune. Like a brand of fire these magic practices and superstitions sent sparks in all directions, and the sparks were fanned into flame by fear and ignorance. Thus did superstition spread quickly. It was as contagious as any infectious disease. Witch doctors, medicine men, magicians, sorcerers rode in upon the crest of the superstitious wave to begin their march across the ages.

These witches and wizards, medicine men and magicians made their appearance wherever the belief in magic prevailed. They were regarded with awe and fearful respect, and the general notion was that they were in direct communication with the spirit world. Therefore, it was believed that they could foretell the future or read the past; that they could prevent thunderstorms or invite rain in time of drought; that they could propitiate angry deities and so save the people from impending punishment. Hence, the witch doctor received gifts—the best that the tribe could procure. And as a consequence, everyone who was able to do so posed as a witch doctor.

Magic practices were divided into two definite kinds—black magic and white magic. The term “black magic” applied to all those practices which caused evil and harm to others, as, for instance, the age-old practice of burning a wooden image of an enemy for the purpose of causing his destruction—still practiced in Africa and among other savage peoples. The practices termed “white magic” were intended to combat the influences of black magic, achieving good instead of evil. A primitive people would use black magic against the elements, against their enemies. The same people would use white magic to prevent illness, thunderstorms, droughts, and other evils.

Out of these early forms of magic grew many curious customs. In time of illness the medicine man applied his lips to the part that pained and “sucked out the evil.” It is still a natural instinct to suck a bruised finger—still a nursery remedy to “kiss it and make it well” (see p. 23). The rain-maker also made his appearance; charm words and spells were invented; talismans, amulets, and good-luck charms appeared in great profusion. Man entered upon an era of superstitious bondage from which he has never wholly escaped.

The Spread of Superstition.—Untold are the crimes that have been committed in the name of superstition! Untold are the victims who have died upon the sacrificial altar—human sacrifices to man-made gods and man-made superstitions! A trail of blood and blackness stretches out across the ages to show the path that superstition has taken.

Nor did Christianity dispel the ignorance and superstitious fears which held man in bondage. We find the fear of the “evil eye” still persisting. We find definite charms, and spells, and incantations for the purpose of warding off evil influences. Religion took one path; superstition another. Sometimes a curious superstitious notion found its way into the religious practices, was accepted, became a religious rite—and *has survived*.

French, 18th Century.*

The narrow-minded ignorance of the Middle Ages gave rise to many atrocities—blots upon the pages of history, but blots carefully erased from the pages of schoolbooks. Thousands of men and women were killed for no other reason than that they were supposed to be exerting an "evil influence." Infants born with too-bright eyes or with little faces that seemed "wise and canny" to the superstitious were sacrificed for fear that they might be evil spirits born into the world through some unsuspecting woman. An old woman mumbling to herself in the street would cause a panic which invariably ended in some horrible massacre of elderly people.

The mediæval community cooped up between the narrow walls of dark little cities and villages, at the mercy of a thousand unknown forces of nature, was always in a state of panic. Disease, a solar eclipse, a stroke of lightning, a flood, all these were not the result of impersonal natural laws, but the direct manifestation of an evil will. The community at large (with that strange sense of justice which is an integral part of all slightly civilized groups of human beings) was for ever looking for someone whose personal wickedness had caused the disaster.

One of the most familiar forms of superstitious massacres is that of the burning of women and girls as witches. Writing in the June, 1923, number of *Mentor*, Hendrik van Loon says:

The witch game was played with human lives, and the odds were a hundred to one against the victim.

It would be difficult to estimate the vast numbers of men and women who met death as wizards and witches. There is very little doubt, however, that the great majority of the victims were women. In 1515, during a witchcraft craze in Europe, thousands of women were burned—very few men. Van Loon says:

During the first half of the 17th century, one energetic witch-hunter (by the name of Carpzou) alone passed the sentence of death on more than fifteen thousand witches. At this rate, the number of victims must have run into several million—which seems incredi-

ble. More conservative historians place it at two or three hundred thousand—which is quite enough.

The two groups of women who appear to have suffered most were the young women who refused to marry and preferred to live alone, and the elderly women who mumbled to themselves or otherwise acted “witchly.” Only occasionally was a young married woman burned as a witch, unless, as was sometimes the case, the husband tired of her and for purposes of his own directed suspicion upon her.

One of the most familiar characters born of superstition is the witch who rides upon broom sticks. There are still many people who believe that witches prowls about on Hallowe'en.

In the 17th century the spark of superstition found its way across the Atlantic, was fanned into flame in Salem with the result that innocent persons were sacrificed to ease the superstitious hysteria of the masses. The Salem witchcraft delusion is much exaggerated, however. It lasted less than a year and comparatively few people were murdered; but it seems more appalling to us than most witchcraft crazes because it is closer, both in time and in place.

A curious thing about the Salem “witches” is that

several of them actually confessed. Of course, in mediæval Europe many of the men and women accused of being wizards or witches confessed under torture, but in Salem women confessed of their own accord. It would appear that the superstitious notions of the people, being contagious, so affected these poor souls accused of witchcraft that they actually believed themselves to be "possessed" and could not deny the accusation when arrested. Ignorant fear and superstition would have persuaded these women that they actually were witches, just as superstition caused Ferdinand IV to die of fright.

The story is that in 1312 Peter and John de Carvajal were condemned to death for murder on circumstantial evidence. They were sentenced to be thrown from the summit to jagged depths below. Ferdinand IV, then King of Spain, resisted obstinately every attempt to induce him to grant a pardon.

Standing upon the spot from which they were to be thrown, the two men called upon God to witness their innocence, appealing to His high tribunal to prove it. They summoned the King to appear before this tribunal in thirty days. His Majesty laughed at the summons and gave the sign to proceed with the execution.

In a few days the King fell ill. He retired to his country residence, ostensibly to rest but really to shake off remembrance of the summons which somehow persisted. He could not be diverted. He became more and more ill, and on the thirtieth day he was found dead in bed—a victim to the superstitious dread which had gripped his heart from the moment the summons had been uttered.

The witchcraft crazes represent only one, though an appalling and conspicuous, phase of superstition. Following in their wake were many practices intended to ward off evil influences, many absurd and curious customs, many superstitious notions concerning things lucky and things unlucky.

Even in this age of science we are not entirely free from

superstition. We have our lucky coins, our unlucky Fridays and our wishbones. We have our palm-readers and our crystal-gazers, our birth omens and wedding omens. We still cast a bit of salt over the shoulder, still pick up a fallen horseshoe, still have our delusions concerning broken mirrors, black cats, and unlucky thirteens.

Ever since the beginning of time [says Van Loon], man has run to crystal-gazers, and fortune-tellers and soothsayers and necromancers to get secret information about the events of the immediate future. He is doing it to day. Look at the advertising pages of any of the great English dailies and you will see what we mean. Spook doctors offer their services to bereaved parents and to ruined business men. Yogis, with and without turbans, are ready to tell the smitten girl just what sort of husband the handsome young man will make.

Some of the world's greatest thinkers have been slaves to superstition. Sir Walter Scott, for instance, would not visit Melrose Abbey at night because of the superstitious dread of bogies and ghosts. Napoleon had a horror of black cats. Peter the Great would not cross bridges because of a superstitious fear. Cotton Mather, American clergyman and author, took an active part in the witchcraft persecutions at Salem. The great Blackstone, on whose teachings England's law and our own are based, openly declared that witches existed and that he believed they caused evil—a belief voiced also, at his inspiration, by many prominent lawyers and ministers of his day.

Witchcraft delusions belong to the dark ages of the past. Magical rites and practices for the purpose of warding off evil are confined solely to savages. Nevertheless, there are few persons to-day who do not have their pet superstitions—harmless superstitions, the most of which, however, have their origins buried in paganism, in savagery. We find these superstitions prevalent even among the most highly educated people. In a recent experiment it was found that only thirty-two students out of two thousand were unable to quote a superstition in which they truthfully believed.

As one authority says:

Few persons, no matter how rational, are not given to superstition. . . . One reason why superstition has not yet died out among lettered and intelligent people is because it is contagious. In Colonial days in Salem even the learned professors and lawyers believed in witchcraft. It was "in the air." Children brought up in atmosphere of credulity rarely rise above it.

We find superstitious notions in famous literature. In "Evangeline," Longfellow says: "Happy art thou, as if every day thou hadst picked up a horseshoe," Goldsmith tells us in "The Vicar of Wakefield" that the "girls had their omens" and that "true love knots lurked at the bottom of every tea-cup." Herrick writes:

My ear tingles, some there be,
That are snarling now at me.

The "Arabian Nights" abounds with magical tales, and in our fairy tales we read of mice that turn to horses, pumpkins that become fairy chariots, boys that climb beanstalks to kill evil giants, pussies that wear seven-league boots.

Just as these tales are relics of old fears and superstitions, many of our modern customs and beliefs are relics, remnants, of the superstitions that characterized early life. Why is thirteen regarded as an unlucky number? What makes Friday different from any other day? What is the significance of the horseshoe? Why do we say "God bless you!" to a person who has sneezed?

Harmless superstitions—a sort of luxury to the modern mind. Where did they come from? How did they originate? What do they mean? In this chapter we will concern ourselves with the superstitions that are still prevalent and popular, superstitions that many people still observe.

GOOD-LUCK OMENS

In savage life the general use of talismans and amulets is to guard against the "evil eye." We find this fear, in one form or another, prevalent in almost all parts of the world, not only among savages but among civilized peoples. The Dutch, the Irish, the Italians, the Egyptians, the Chinese—all fear the evil eye and have charms for the purpose of warding off its evil influence. The Dutch place broad strips of black paint upon their farmhouses; the Irish have special "charm phrases"; the Chinese expectorate over the shoulder to frighten away the Evil One. We find similar customs almost universally prevalent.

The amulet, intended for protection against the evil eye, is usually just a bit of stone, a shell, or image of carved wood. But in modern life these amulets have taken the form of good-luck charms and are offered in such guise as miniature wishbones or horseshoes, little china pigs or elephants. Men wear them on their watch chains; women wear them on ribbons around their necks.

In savage life the amulet or talisman is a charm intended to exert a magical influence upon evil spirits and frighten them away. In modern life the good luck charm is intended to attract good rather than to repel evil. The transition has given rise to the custom of accepting certain objects and certain happenings as good luck omens. The most familiar of these omens will presently be discussed.

The word "luck" itself appears to have been derived from an old Anglo-Saxon verb meaning "to catch." It is analogous to the German word *Glück*, indicating "a good catch."

The Lucky Horseshoe.—One of the most familiar good-luck omens, and one widely prevalent, is that concerning the finding of a horseshoe. There are many fascinating legends connected with this omen, some of which reach back into antiquity.

The horseshoe closely resembles the conventional figure for the *yoni* (phallic symbol) in modern Hindu temples.

Phallic ornaments, since the early days of sex-worship, have been used to avert evil influences. In North Africa, for instance, we find phallic charms above the entrances of houses and over tent doors. The natives inform us that these charms, very similar in shape to the horseshoe, drive away the evil eye. It is probable that the good luck attributed to the horseshoe is in some way connected with the good luck of the phallic charms.

Some authorities are of the opinion that the horseshoe is regarded as a good luck omen because it resembles the crescent moon. There have been many peoples who considered the crescent moon extremely lucky, and it is barely possible that the horseshoe, because it looks like the crescent moon, is considered lucky by these people too. The belief would have spread quickly elsewhere, been carried to other peoples, and become a popular notion.

One writer says that the horseshoe, "wherever used as an amulet or charm, is the handy conventional representative of the crescent, and that the Buddhist crescent emblem is a horseshoe with the curve pointed like a Gothic arch."

The exact origin of the iron horseshoe is not known. Prof. N. S. Shaler believes that it was invented in the 4th century A.D. and that it originated in Greece. However, some very ancient iron horseshoes have been found in the south of Scotland. Appian makes mention of iron shoes for horses; and in a mosaic portraying the Battle of Issus (unearthed at Pompeii in 1831) is the figure of a horse which appeared to be shod with iron shoes similar to those in modern use. There seems to be abundant evidence that the ancients protected the feet of their beasts of burden.

When the horseshoe began to be used as a good luck charm is not known. Possibly no definite date could be set, as the belief appears to be a slow development. It may have grown out of the phallic ornaments and belief in their power to charm. It may have grown out of the crescent moon, long regarded as a good luck omen. The Irish say that the horse was in the stable where Christ was

born, and that the horseshoe was therefore given magical power. Almost every country has a different legend or tradition concerning this omen.

The Romans had the custom of driving nails into cottage walls as an antidote against the plague [says one writer]. Both this practice and the later one of nailing up horseshoes, have been thought by some to have originated from the rite of Passover. Blood sprinkled upon doorposts and lintel at the time of the great Jewish feast formed the chief points of an arch and it may be that with this in mind the people adopted the horseshoe as an arch-shaped talisman, and it thus became generally emblematic of good luck.

It is interesting to note, in this connection, that the peasants of the west of Scotland have for centuries had the custom of training the boughs of certain trees to form an arch over the farmyard gate to protect the cattle from evil.

Iron has always been regarded as a protective agent and a good-luck charm. In Scandinavia, iron is the historic charm against the wiles of sorcerers. Among many ancient peoples iron was regarded as a protection against evil spirits; many regarded it as a protection against the plague. Pliny says that iron coffin nails, affixed to the lintel of the door, protect the people within from spirits that may be prowling in the neighbourhood. Pliny also remarks that there is no more excellent protection against illness than the cast-off horseshoe found in the road, and he advises it not only as a protective charm but as a healing agent.

The Chinese have for ages had the superstitious notion that to hang crooked horseshoe nails on a string around a child's neck is to ward off illness and evil influences. The Scotch fisherman, highly superstitious, carries with him always a bit of iron—"for luck"—or tacks it above the door at home to insure his safe return.

The horseshoe superstition captivated the public fancy, and the finding of a horseshoe became a general omen of good luck. The one outstanding exception to this widely prevalent superstition is the Bohemian belief that to pick

up a horseshoe is to pick up bad luck; but even among the Bohemians it is believed that a nailed-up horseshoe will cure lunacy and help to prevent others from losing their minds.

There is an ancient Saxon superstition that witches cannot practise their wiles upon persons in the open air, and to cause harm or injury to a person they must enter the home of that person. It would appear that horseshoes were placed at the outer entrance to homes, rather than inside, because of this superstitious notion. It is still customary to tack up a horseshoe on the outside of a door.

The horseshoe superstition is still widely prevalent. There are many people even to-day who believe that the finding of a cast-off horseshoe is an omen of good luck. Miniature horseshoes, in the form of charms, are worn on ribbons and on watch fobs. Nor is the superstition in any sense limited; we find it among the educated as among the uneducated. Indeed, this horseshoe superstition appears to have been a favourite during the last five centuries among writers, teachers, physicians, and intellectuals generally.

In the 18th century, for instance, Dr. Robert James, an English physician, discovered a fever powder for which he became famous and through which he attained great success. Having once found a horseshoe at Westminster Bridge, Doctor James ascribed his success to that omen, and consequently he adopted the horseshoe as a family crest.

Before leaving the subject of the horseshoe, it is interesting to note that in some countries the blacksmith was credited with supernatural powers. Some writers, in fact, advance the theory that the horseshoe is regarded as a good-luck omen because the blacksmith, in the rôle of wizard or witchdoctor, used it as a charm in performing his "white magic." In Russia blacksmiths at one time enjoyed a reputation as magicians, and oaths were taken upon the anvil instead of the Bible.

The Four-Leafed Clover.—A superstition as widely prevalent as that of the good-luck horseshoe is the belief that a four-leafed clover portends fortune and happiness. This is a very old superstition, and its origin is lost in antiquity.

The old legend is that Eve, upon being ejected from Paradise, took a four-leafed clover with her. Because the clover was a bit of green from the garden of paradise, its presence in one's own garden came to be looked upon as an omen of good luck.

Herrick, in his "Hesperides" (1648) mentions the four-leafed clover and indicates the custom of strewing these good-luck omens before the bride to insure her happiness. We quote:

The showers of roses, lucky foure-leav'd grasse
The while the cloud of younglings sing,
And drown ye with a flowrie spring.

A Curious Luck Custom.—Among the ancients, spittle was esteemed a charm against all evil. Pliny tells us that spitting was superstitiously observed by people to avert the influences of witchcraft. Theocritus says, "Thrice on my breast I spit to guard me safe from fascinating charms." The Boxers always spit into their hands to insure success in all their undertakings.

The custom of spitting on money for luck is a relic of the time when bodies and property were "anointed with the grease of animals as a sign of ownership and affluence." Spitting, in other words, was a mode of consecrating or anointing. It became accepted generally as a method of insuring good luck or success in an undertaking, and also of insuring one's property against theft from others. Some early peoples spit upon property to prevent witches or other evil influences from luring it away.

To spit on a coin "for luck" is still a custom among people of a highly superstitious sort.

The Magic of the Tides.—Primitive peoples marvelled at the changing of the tides, even as we do to-day. Why were the tides sometimes low, sometimes high? Why did

the rollings and the rockings never cease? Where did the waves come from and where did they go? What was the great secret of the sea?

It was in an effort to solve this secret that early man evolved the superstitious notion that that the incoming tide brought luck, prosperity, happiness, and that the outgoing tide portended evil to some person or persons living along the coast. An ancient belief, usually accredited to Aristotle, is that no one can die until ebb tide. However, the superstition goes back very much farther and can be traced to a period several generations before the appearance of Aristotle. Primitive men, at a very early period, regarded the flowing tide as a symbol of life and death, and as the tide ebbed slowly outward they believed that life ebbed slowly with it. If one of their number died, they attributed it to the outgoing tide. If a child were born as the tide came in, the superstition was strengthened.

Dickens was evidently acquainted with this superstition, popular among coast peoples, for he has Mr. Peggotty say (in "David Copperfield") : "People can't die along the coast, except when the tide's pretty nigh out. They can't be born unless it's pretty nigh in—not properly born till flood."

Shakespeare must have been familiar with this superstition too, for he has his Falstaff die "even just between twelve and one, even at the turning o' the tide." (Henry V, Act II, Scene III.)

Casting the Tooth over the Shoulder.—A custom widely prevalent among children, and practised also by superstitious grown-ups, is to cast a tooth backward over the left shoulder and make a wish, firmly believing that the wish will come true.

Among certain Australian and African tribes, one or more of a boy's front teeth are knocked out at the ceremonies of initiation to which he must submit before he is able to enjoy the rights and privileges of a full-grown man.

These teeth are buried under a tree, near the roots, the whereabouts of which the boy never knows. While the teeth are being buried the boy's father usually chants a song of hope that the boy may become as strong and stalwart as the tree beside which the teeth will lie for ever.

It is customary, in many parts of the world, to throw the tooth in some corner where a mouse or rat will find it, "in the hope that the remaining teeth will acquire the whiteness and firmness of the teeth of the rodents." In Germany, to give one example, it is practically a universal custom to go behind the stove and throw the tooth backward over the head, saying, "Mouse give me your iron tooth; I will give you my bone tooth."

The modern custom is to cast the tooth over the left shoulder and make a wish, not necessarily for a son as strong and stalwart as a tree, or teeth as white and firm as a rodent's, but for anything one would like to have. If the tooth cannot be found after it has been cast over the shoulder, one may interpret it as a good-luck omen. The wish will surely come true!

BAD LUCK OMENS

Fear of the unknown and dread of the evil eye led early man to avoid whatever seemed, to his superstitious mind, an omen of bad luck. He saw signs of warning in the simplest happenings. Whatever he feared or could not understand he accepted as an agent of evil and hence something to be shunned.

Some of the early superstitions, originally concerned with the evil eye and with customs for banishing or destroying its influence, have survived and are still observed. The survivals have taken the form of bad luck omens such as the black cat, the spilling of salt, the number thirteen, etc. And, of course, there are methods for overcoming the bad luck promised by these omens, as casting a pinch of the salt over the shoulder, or whispering a benediction after the sneeze.

The Unlucky Number Thirteen.—

And Neolithic man was counting, and falling under the spell of numbers [says Wells]. He was beginning to use tallies, and wondering at the triangularity of three and the squareness of four, and why some quantities like twelve were easy to divide in all sorts of ways, and others, like thirteen, impossible. Twelve became a noble, generous and familiar number to him, and thirteen rather an outcast and disreputable one.

Outcast it has remained ever since! One of the most widespread of superstitious notions is that thirteen is unlucky, and so general is this notion that many hotels do not have a room number thirteen.

Precisely how the superstition originated no one knows. In Scandinavian mythology there are twelve Aesir or Demigods, and the old legend is that Loki came among them, making the thirteenth. This Loki was cruel and evil, according to the story, and among the Demigods he became "the chief author of human misfortunes." Because he was evil, and because he was the thirteenth, the number thirteen came to be looked upon as an omen of ill luck.

Another explanation as to the origin of this superstition is that the Valkyrs, or Virgins, who waited upon the heroes in Valhalla were thirteen in number. Many writers believe that from this source sprang the common superstition concerning the bad luck of the number thirteen, especially in connection with guests at a table.

The most popular explanation, however, is that there were thirteen persons at the Last Supper, Judas being frequently represented as the thirteenth guest. Not a few authorities offer this as the true origin of the superstition, although this writer is inclined to believe that the notion goes back much farther.

The superstition regarding the number thirteen is universal. We find it in France, England, throughout practically the whole of Europe, and in America. It has long been a matter of etiquette in France to avoid having exactly thirteen guests at a dinner or party, and the *pique-*

assiette (corresponding to the English "trencher friend" or "sponger" and to the American "stop-gap") is known also as the *quatorzième*, as he usually is invited to fill the fourteenth seat at the table.

The number seven appears also to have been regarded with superstitious awe by early peoples, although it was considered lucky by as many as considered it unlucky. One writer says:

It is hard to escape the conclusion that magic had something to do with the constant recurrence of the number seven in antiquity. We have the seven caves of the Aztecs, the seven ecstasies of Zoroast, the seventh-day Sabbath, the seven days of the week, the seven golden candlesticks of Solomon's temple.

Another writer says:

Seven was a sacred number among the Acadians, Assyrians, and Babylonians. The "unlucky days" of the "Farmers' Almanac" are based upon this ancient cult.

Among various early peoples, the seventh son of a seventh son was believed gifted with supernatural powers. When such an infant was born, the nurse placed a worm in each of its hands, enclosed in a bit of muslin. The hands were tied up until the worms died, and then the tiny fists were allowed to open. The dead worms were thrown away, but it was believed that locked up in the child's hands were miraculous powers of healing and protecting. When the boy grew to manhood he was regarded as a wizard.

There are still many people who believe that the number seven portends good luck, just as the number thirteen portends ill luck.

The Black Cat.—The black cat is the traditional companion of witches. Because of this old tradition, the black cat has become an omen of misfortune and ill luck, and a popular notion is that unhappiness will follow quickly in the wake of the black cat that crosses one's path.

There is an ancient superstition that spirits are able to assume the forms of black animals, particularly black cats.

An old black-letter book called "Beware the Cat!" (1584) gives warning that black cats are witches in disguise, and that killing the cats does not necessarily mean killing the witches, for a witch can take on the body of a cat nine times.

This old notion concerning the nine lives of a cat goes back to ancient Egypt. The cat-headed goddess, Pasht, was said to have nine lives. It is amazing how a thought will persist through many ages and come at last to be accepted as truth. Even to-day there are many who believe the cat has nine lives, though few realize that this superstitious belief is based upon Pasht, mother cat of the witches, believed by the Egyptians to have nine lives.

The Egyptians did not fear the black cat, but rather revered it. A cemetery sheltering the mummies of thousands of black cats has been unearthed, and not very long ago a cargo of these mummified black cats were sent to England.

But because of the general notion that witches and evil spirits assumed the form of the black cat, this animal came gradually to be looked upon as a bad omen, and the superstition that the black cat was unlucky became widespread. Women who believed themselves witches became fond of the cats and used them in their divinations. In the Middle Ages the brain of a black cat was considered as essential ingredient in all recipes of the witches and witch doctors.

To-day the black cat is not feared as it was in earlier times, but there are many superstitious people who still regard it as an unlucky omen, and who believe that not only the black cat, but all cats, have nine lives.

The black cat is the traditional companion of witches—because of an old superstitious notion that witches are given the power to assume the form of a black cat nine times.

Unlucky Days and Seasons.—The belief in lucky and unlucky days is very ancient. This belief appears to have been taught first by the magicians of ancient Chaldea, and history tells us that similar beliefs affected almost every detail of primitive life in Babylonia. The natives of Madagascar have since the earliest times believed in lucky and unlucky days of birth, and if a child is born on what they consider the unlucky day, it is killed.

The poet Hesiod who, it is believed, lived about 1000 B.C., distinguished lucky days from others in his poem called "Works and Days." He declared that the thirteenth day was unlucky for sowing, but favourable for planting.

Among many early peoples we find the superstitious belief that it is best to sow one's seed at the full of the moon. Among others we find the belief that it is best to gather in the harvest when the moon is full and mellow. Still others regard the crescent moon as a fortunate omen. In South Africa it is to this day considered unlucky to begin a journey or undertake a work of importance during the last quarter of the moon.

The Romans marked their lucky days with a piece of chalk, their unlucky days with charcoal. From this custom of marking unlucky days with charcoal arose the phrase "black-letter day." We still refer to "black-letter days," but with us, instead of portending evil, the "black-letter day" is a day remembered with regret because of some unfortunate occurrence connected with it.

"Blue Monday" is a very old phrase still in general usage. In early days those whose affairs of business occupied them on Sunday were considered entitled to a holiday on Monday. On Monday, therefore, while others were busy at their tasks, these people who worked on Sunday had a day of rest, during which they usually lazed rather than indulged in any pleasures. Because the churches throughout Europe were decorated with blue on the first Monday before Lent—which was a holiday or "lazy day"

for everyone—this day of rest for the Sunday workers came to be known as “Blue Monday.”

We still use the phrase, but its meaning has become somewhat modified. We now speak of a “Blue Monday” when we wish to convey the thought that we are lazy, tired, melancholy—in *need* of, rather than enjoying, a holiday.

The fear of Friday is quite as old as the fear of the number thirteen. An ancient proverb says:

Friday's moon,
Come when it will, it comes too soon.

The origin of the superstition concerning Friday is traced by most authorities to the crucifixion of Christ on that day. But there are some writers who advance the theory that Friday is regarded as an unlucky day because it was on Friday that Adam and Eve partook of the forbidden fruit. It is quite probable that this popular old legend gave rise to the superstitious notions concerning Friday.

In his “Sex and Sex Worship” Wall says:

Among some nations in Asia the first day of the week was named in honour of the god Saturn, which would make the last day of the week Friday; at that time, however, this last day was sacred to the goddess Mylitta, the Assyrian form of the goddess Venus; this day was consecrated to marriages, and to festivals during which practices were indulged in that are now considered indecent when done in public, but which at that time were done publicly in honour of Venus (Mylitta) in her temples.

This day therefore became accursed to the early Christians, because the church considered the sexual rites in honour of the goddess Venus as a gross affront to their own Virgin.

This explanation of Friday's disrepute explains also the inevitable fish on Friday. As a symbol of the *yoni*, the fish was consecrated to the goddess Mylitta. But the early Christians, despising the pagan goddess and the sexual rites, ate the fish at their feast on Virgin's Day (Freya Day, or Friday). “The fish is still eaten, but as a fast, on the Virgin's Day by an overwhelming majority of Christians.”

Although we are still accustomed to refer to Friday as an unlucky day, it would seem that we in the United States should regard it as a particularly lucky day. It was on a Friday, August 3, 1492, that Columbus set sail from the Port of Palos, Spain, on his great voyage of discovery. It was on a Friday, October 12th, that land was sighted. On Friday, November 10, 1620, the *Mayflower* reached the harbour of Provincetown, and on Friday, December 22, 1620, the Plymouth fathers landed upon the famous Plymouth Rock. A century later, on a Friday, February 22, 1732, George Washington was born. It would seem that all good things happened to young America on the traditional bad-luck day!

The Broken Mirror.—One of the most common of modern superstitions is that to break a mirror invites death, or seven years of bad luck.

Since very early times the mirror has been used in divination, in attempts to read the future or the past. In ancient Greece divination performed by means of water and a mirror was so popular and so widely practised that it was given a definite name—"catoptomancy." There are still seers and fortune tellers who "see" the past and the future in crystals and mirrors.

An early belief was that one saw the will of the gods in the mirror. To break a mirror accidentally, therefore, was interpreted as an effort on the part of the gods to prevent the person from seeing into the future. This was construed as a warning that the future held unpleasant things. Among highly superstitious people the breaking of the mirror came to be looked upon as a death omen. Somehow this superstitious belief has prevailed and still exists even among educated people.

It is related of Napoleon that on one occasion when he was campaigning in Italy he broke accidentally a mirror which hung over Josephine's portrait. Instantly he conceived the superstitious notion that she had died, and he couldn't rest until he returned home and saw for himself

that she was well and alive. Superstition sometimes clouds even a brilliant mind.

The curious notion that to break a mirror brings seven years of bad luck originated with the Romans about the first century of the Christian Era. They believed that the health of a person changed every seven years, and as the mirror reflected the health, or appearance, of the person, to break it meant to break the health for a period of seven years. Hence the belief in seven years of bad luck.

There are many people who believe a falling window blind a bad omen—usually a forewarning of death in the house. We can readily understand how a window blind, falling suddenly and for apparently no reason, would strike terror into the hearts of superstitious people. Early man, keen as an animal trained to the jungle, could sense the slightest rustle near his cave, the faintest approach of beast or man. Fear of enemies made man sensitive to every sound, alert, fearful. As he slowly developed man lost much of his keenness, but he has never lost entirely his fear of unexplained sounds, of rustlings and noises that seem to come from nowhere. A blind falling suddenly and noisily in an empty room makes the bravest person tense and alert for a moment. We can understand how superstitious people would have accepted this falling blind as an omen of ill luck—of death. The superstition, like many others, has survived and is a part of modern life.

Dread of a Drowning Person.—One of the most inhuman of all superstitions is that which forbids the rescue of a person who is drowning because it invites misfortune to the rescuer.

The general notion among superstitious peoples everywhere is that if a man is drowning, it is the intention of the gods that he do so. To rescue the man is to defeat the purpose of the gods—cheat them—and hence win their enmity.

Tylor tells of an occasion in 1864 when fishermen in Bohemia actually refused to snatch a drowning man from

the water as they believed they would endanger their own lives by doing so. The same superstition exists among the boatmen of the Danube, among the French and English sailors.

Another explanation of this curious superstition is that "the water spirit requires tribute" and that to deny the spirit this tribute is to invite misfortune and disaster. This, according to some authorities, accounts for the reluctance among primitive seaside peoples to rescue a drowning person from the water. A familiar old rhyme is:

Save a stranger from the sea
And he'll turn your enemy!

Some Death Omens.—An ancient belief is that the howling of dogs portends death and calamities. This appears to be a relic of the time when men made deities of animals. As a deity, the dog was supposed to be able to foresee death and give warning of it by howling or barking. In the *Odyssey* the dogs of Eumæus are described as terrified at the sight of Minerva, although at the time she was invisible to Telemachus.

Among sailors we find the belief that sharks following a ship also portend death. There is scarcely a sailor who does not believe that if a shark follows a ship someone aboard is going to die. The truth is that sharks follow a ship for the refuse that is thrown overboard.

Man has always feared death and he has imagined omens, or warnings, in the simplest things. Ringing in the ears, for instance, has been regarded as a sign of impending death for many generations. To place three chairs in a row accidentally means a death in the family. If a sick person is changed from one room to another it is a sure sign that he will die. He who counts the carriages at a passing funeral will die within the year. An open umbrella, held over the head indoors, indicates approaching death. Scores of superstitions like these exist among peoples everywhere.

In Europe, the country people always turn the mirror to the wall when someone lies dead in the house. They believe that whoever looks into a mirror when there is death in the house will die also. This custom of turning the mirrors to the wall, evidently to avoid seeing the evil spirits which cause death, originated among the early Irish, but quickly spread among superstitious peoples everywhere. The custom is practised even in the United States among various peoples, and frequently all pictures hanging on the walls, as well as all mirrors, are turned around.

There are several superstitious reasons for planting yew trees in churchyards. One reason is that the yew is symbolic, typifying the doctrine of resurrection by its unchanging verdure. Another reason is that some species of yew trees are gloomy and poisonous, and hence just right for the churchyard.

The ringing of bells or death knells for the deceased is very ancient. Bells themselves are very old, dating back many centuries before Christ—indeed, going back even farther than the biblical record. In ancient times bells were rung only when important people died, but with the coming of Christianity it was the custom to ring death bells “for all good Christians.”

Some authorities believe that the ringing of bells at times of death originated in the desire to frighten away the evil spirits that lurk about a dead body, the fearsome, invisible ghosts that wait to pounce upon the soul.

To Change One's Luck in Cards.—A current superstition is that to change one's seat during a card game is to change one's luck. An unlucky player will often ask permission to change seats with a lucky player. “Maybe my luck will change!” he laughs—little realizing that he is expressing an old primitive thought.

To the primitive mind, any sort of change or substitution represents escape from danger or from ill luck. Thus among many savages an ill man will change his name in an effort to frighten away the evil spirits that are causing

him his pain. Among the Dyaks a man changes his name after recovering from an illness in the hope of thus "getting rid of his former personality and its liability to disease."

In Amboina, if a couple have lost several children the father gives the next child to another woman, firmly believing that the change will enable the child to live. In Ceramlaut a barren woman changes her name believing that the change also affects her personality and her bodily functions. Among many savages the boy is given another name at puberty, to symbolize the change in status from boy to man.

To-day, based upon the same primitive notion, seats are changed by players to change their luck.

A superstition at Monte Carlo is that immediately after a suicide, everyone who plays against the bank will win. So thoroughly do the gamblers believe in this superstition that as soon as news of a suicide is heard there is a great rush for tables. One can easily understand how a superstition of this nature would have originated. The news of a suicide would depress the gamblers and cause them to leave the tables. To counteract this affect, wily persons evidently caused the superstition to be circulated that to play against the bank after a suicide is to win.

Among the more popular card superstitions we find that to drop a card while playing is a bad omen. There are some superstitious players who actually refuse to continue after a card has been dropped in the game. Another popular superstition is that one who plays with a cross-eyed partner cannot possibly win. The notion among players is that cross-eyes frighten away luck.

Salt Superstitions.—No one knows the exact origin of salt, or how its use first became known to man. In Finnish mythology we read that the mighty god of the sky, Ukko, struck fire in the heavens. A spark from this celestial fire fell into the ocean and turned to salt. Another old legend is that the oceans are made up of the tears of all

those who have suffered since the world began; and as tears are salt, the oceans' waters are salt.

We know that salt was used long before the Christian Era, and that it was highly valued by those who included it in their dietary. Wells indicates that salt was probably being traded even in Neolithic times, pointing out that "on a meat dietary men can live without salt, but grain-consuming people need it just as herbivorous animals need it."

Among the Israelites salt was valued as an item of diet. They believed that no meal was complete without a bit of salt to help digest it, although *how* it helped they never attempted to explain. Homer called salt divine, and Plato described it as a substance valued by the gods.

At one time salt was regarded as being almost as valuable as gold, and soldiers, officials, and working people in Greece and Rome received all or part of their pay in salt. Money paid for labour or service was termed *salarium*, from whence comes our word *salary*, meaning money paid for services rendered. From this custom of paying with salt comes also the popular phrase "to earn one's salt."

It was a custom in early times to place salt before strangers as a token or pledge of friendship. To eat a person's salt, therefore, came to be used as the popular expression for accepting a person's hospitality. "Take a pinch of salt with me" was the popular method of inviting a friend or acquaintance to one's home to partake of one's hospitality.

In Oriental lands salt was offered to guests as a token of hospitality, and if any particles fell to the ground while being presented it was accounted an omen of ill luck. The belief was that a quarrel or a dispute would follow.

One authority says:

The widespread notion that the spilling of salt produces evil consequences is supposed to have originated in the tradition that Judas overturned a salt-cellar at the Paschal Supper as portrayed in Leonardo da Vinci's painting. But it appears more probable that the belief is due to the sacred character of salt in early times. Any one having the misfortune to spill salt was formerly supposed to

incur the anger of all good spirits and to be rendered susceptible to the malevolent influences of demons.

Among the Germans we find the old saying "Whoever spills salt arouses enmity." Among the Romans we find the belief that to spill salt is to cause quarrels or disputes, and it was the custom to exclaim, when salt was spilled, "May the gods avert the omen!" An old tradition says that if salt is thrown over the left shoulder it will appease the devil, who will otherwise make enemies of friends whenever salt is spilled.

These old salt superstitions are found in many widely separated countries. Long ago they captured the public fancy, and they have survived. We still find many people who believe that to spill salt is an omen of a quarrel or of lost friendship, and that to cast a bit of the salt over the left shoulder is to "avert the omen."

"*God Bless You!*"—The ancients gave much thought and contemplation to the sneeze. Where did it come from? What did it portend? Was it a lucky or an unlucky omen?

Among those early peoples who believed the soul dwelt inside the head, any function of the head was respected. The sneeze was regarded by many as a sign from the soul—an omen—a warning. Some regarded it as a lucky omen, others as an unlucky omen. The Greeks, Romans, and Egyptians considered the sneeze a kind of divinity or oracle which warned them in times of danger, which foretold future good or evil. Sneezing to the right was considered lucky, to the left, unlucky.

In early life there were so many omens and superstitions concerning the sneeze that it would be impossible to consider them all here. St. Augustine tells us that in his time there were so many sneeze omens, and they were regarded with such utter faith, that a man would return to bed instantly if he happened to sneeze while putting on his shoes, or upon any other occasion that, according to the omen, was supposed to forewarn of ill luck.

An old Flemish belief was that a sneeze during conver-

sation proved the truth of a remark. This is one of the oldest superstitions in connection with the sneeze, and it was prevalent among the Greeks, the Romans, and the Egyptians. In the *Odyssey* we read that the Princess Penelope, unhappy because of the importunities of her suitors, prayed that her husband Ulysses be returned to her. As she ended the prayer her son Telemachus sneezed, whereupon Penelope felt vastly relieved, accepting it as an omen that her prayer would be answered.

Just before the battle of Salamis (480 B.C.), the Athenian commander Themistocles stood upon the deck of his gallery offering a sacrifice to the gods. A sneeze was heard which was hailed by Euphrantides, the soothsayer, as an omen from the gods that the battle would end in victory for them. Themistocles was greatly heartened by this "lucky" omen.

The custom of uttering a benediction after the sneeze is universal. Its origin is obscure, and each country seems to have its own particular legend concerning it. Among the Romans, for instance, we find the belief that the sneeze expelled evil spirits. To sneeze, therefore, was regarded somewhat in the light of a lucky effort on the part of the person to rid his system of evil spirits, and those present at the time would say, "Good luck to you." Many references to this salutation after sneezing are found in the writings of ancient Roman authors.

There is an old legend that before the time of Jacob men sneezed only once, and expired. But the patriarch interceded in the behalf of man and obtained a relaxation of this law on condition that a prayer or benediction follow every sneeze. Some writers offer this old legend as an explanation of the modern sneeze benediction, "God bless you!"

We quote, for instance, from a recent writer on this subject who says:

After the creation, God decreed that every living person should sneeze but once—and that at the instant of the sneeze his soul

should depart from his body. Jacob it seems was a strenuous objector to being so unceremoniously eliminated from this earth's joys and he earnestly entreated the Lord to grant him and his children the favour of being excepted from the rule. This favour was granted and in return Jacob praised God each time his children sneezed. The Princes of the Earth, hearing of the decree, implored favour likewise—therefore the danger of the sneeze was averted to all if a blessing was asked each time. Hence, to this day, "God bless you" has a meaning with all nations of the earth.

There can be no doubt that the phrase "God bless you!" is very ancient and traces its way into remote antiquity. There was a common notion among many primitive peoples that the sneeze was a sign of impending death, and therefore when anyone sneezed the customary phrase was "God help you!" or its equivalent.

In Iceland, tradition tells us, there was once a dreadful scourge known as the Black Pest. The mortality was great and one after another the people succumbed. In a certain household it was observed by a brother and sister that everyone around them who succumbed to the scourge was first attacked by sneezing. Therefore when they themselves sneezed they cried, "God help me!" Because of this prayer they were allowed to live, and the story is that of all the inhabitants of the district, this brother and sister were the only ones who survived. Through all succeeding generations the Icelanders have continued the custom of saying, "God help me!" when they themselves sneeze—"God help you!" when others sneeze.

Carlo Signonio, the Italian historian,

voices the belief that the practice [of saying "God bless you!" after sneezing] began in the sixth century during the pontificate of Gregory the Great. At this period a virulent pestilence raged in Italy which proved fatal to those who sneezed. The Pope, therefore, ordered prayers to be said against it, accompanied by signs of the cross.

It was during this era that the custom of crying "God bless you!" to persons who sneezed became definitely established.

The phrase, or benediction, is still in general use.

GEM SUPERSTITION

The popular superstitions concerning gems are really survivals of the primitive superstitions concerning amulets worn for protective purposes. The amulet (from the Arab word *hamala*, meaning "to carry") is anything hung around the neck, wrists, ankles, or in any way attached to the person for the purpose of warding off evil or protecting against illness. The gem amulets of modern life carry the same significance.

Amber is one of the oldest of all gem amulets. As a charm it has stories and traditions without end. It is said to change colour with the state of one's health, and is therefore an excellent indicator of one's condition. There is also a superstition that amber will prevent illness, and that it will prove a special protection against throat diseases if worn on a ribbon around the neck.

Coral also changes colour according to the state of health. As an amulet coral is declared lucky, and we are told that "to hang coral about an infant's neck will save it from falls and sickness." During the Middle Ages coral was worn as a protection from witches and witchcraft.

For a long time opals were regarded as lucky gems and were supposed to possess supernatural powers. They were worn as charms by many people until Sir Walter Scott, in his "Anne of Geierstein" introduced them as unlucky amulets, inviting misfortune and unhappiness to the wearer. This bit of fictional belief that the opal is unlucky became superstitious fact to the mass mind, and "unlucky" the opal has remained ever since.

The sapphire has always been a symbol of good luck. The ancients believed that to wear the sapphire was to invite the favour of the gods. The diamond was also considered lucky, particularly among the Italians. In Oriental countries the favourite good-luck amulet is the turquoise, which is usually carved with the name of Allah or a verse from the Koran for additional enchantment.

It is a general belief that pearls bring bad luck. However, history tells us that Venus favoured pearls more than any other gems, and that the Romans and Greeks wore pearls to win the favour of the goddess. The Orientals believe that pearls have medicinal properties, and that to wear them greatly improves the clearness and beauty of the skin.

The custom of wearing one's birthstone as a lucky gem amulet still prevails. Following are the birthstones that are supposed to bring good luck to the wearers:

January	Garnet	July	Ruby
February	Amethyst	August	Sardonyx
March	Bloodstone	September	Sapphire
April	Diamond	October	Opal
May	Emerald	November	Topaz
June	Agate	December	Turquoise

FLOWER SUPERSTITIONS

From the very first, nature's gift of flowers captured the heart of man. He watched the tiny buds open their velvet petals to the sun. He saw the slender life stems sway gently in the breeze, and drank of the perfume that flooded his senses. Red, green, and yellow things growing in wild profusion. Pretty, harmless things that tasted good when one nibbled them.

Man soon came to know and love the flowers that made their appearance at different seasons of the year. There were times when the world was ugly and barren; times when the world was brightly carpeted with flowers and creeping vines. Man learned to recognize the flowers that portended mild, pleasant weather. He watched when the flowers withered and knew that the cold spell was not far off.

And sometimes man wandered long on barren lands, across cold and cheerless stretches. Where were the gay growing things that meant warmth and sunshine, the laughing bits of colour that filled the world with perfume? He

followed the path that led southward and came at last to the cheerful spot where flowers grew. And here he made his home.

At an early period flowers found their way into various religious ceremonies, into courtship customs, into harvest and season festivals. The beauty and fragrance of the blossoms won for them an enduring place in the heart and in the sentiments of mankind.

We are all familiar with the conspicuous part flowers have played in love and courtship. In Egypt, Rome, Greece, among the South Sea Islanders, even among savages that roam jungle wastes—wherever we tread our way through the mazes of man's history—we find the flower silently symbolizing the blossoming of love. Wall says:

The Hawaiian women decorate themselves with wreaths and garlands of odorous flowers; Cleopatra is identified by both ancient and modern writers with the utmost luxury in the use of perfumery and flowers, and our modern women delight in receiving gifts of flowers and rare perfumes.

In Rome and in Greece flowers spoke not only in the language of love, but in eloquent tones of beauty and decoration. Crowning with flowers was accounted a high honour, and wreaths of myrtle and ivy were awarded victors in games. Among the Athenians the violet was the favourite flower, and the hyacinth and laurel were early favourites.

Egypt loved its roses. In a gold box, beautifully jewelled, in Tutankhamen's tomb was found a mass of roses, still exuding a faint perfume after thousands of years of preservation. Egypt plucked its roses from the banks of the Nile where they grew in great profusion at the time of Tutankhamen. Rome also loved its roses, and we are told that Roman youths sent baskets of roses tied with ribbons to the maidens they admired—much in the modern manner!

In Egypt it was customary to present each dinner guest

with a small garland of flowers. This custom is traced also among the Greeks and Romans. Thus has the flower expressed not only love, beauty, tenderness, but hospitality.

Through the ages, each flower has taken a single significance; and to-day flowers are symbols that speak a language as eloquent as any invented by man. There is a flower that expresses tenderness, another that carries the message of love. There is a flower that breathes of kind remembrance and a flower that tells of hope. From several

sources we have accumulated this list of popular flowers and their hidden meanings:

Acacia	Friendship
Acacia, yellow	Awakening love
Almond Blossoms	Indiscretion
Anemone	Forsaken
Apple Blossoms	Hope, awakening
Aster, China	Variety
Auricula, Scarlet	Luxury, extravagance
Bachelor's-button	Celibacy
Balm	Sympathy
Balsamine	Impatience
Bramble	Envy
Buttercup	Ingratitude
Carnation	Love, promise, beauty
Catchfly	Artifice
Cedar	Thoughtfulness

Chrysanthemum	Wealth, abundance
Clover	Hope
Columbine	Constancy
Cowslip	Divinity
Crocus	Cheerfulness
Cypress	Mourning
Daffodil	Self-love
Dahlia	Elegance, dignity
Daisy	Innocence
Dandelion	Coquetry
Flax	Kindness
Flowering Reed	Confidence
Forget-me-not	Remembrance, true love
Fuchsia	Humble love
Geranium	Faith, friendship (also ingenuity)
Grape Blossoms	Mirth, jollity
Harebell	Grief
Hawthorne	Hope, love
Hazel	Peace, reconciliation
Heath	Solitude
Heliotrope	Undying devotion
Holly	Friendship, happiness
Hollyhock	Ambition
Honeysuckle	Generosity
Hyacinth	Play, joyousness
Iris	A message
Ivy	Friendship
Jasmine	Amiability
Jonquil	Desire
Larkspur	Fickleness
Laurel	Glory
Lavender	Acknowledgment
Lilac	Youth, tenderness
Lily	Purity, majesty
Lily-of-the-valley	Return to happiness, humility (as marriage flower, symbolizes happiness)
Locust	Eternal love
Lotus	Eloquence
Lupine	Sorrow
Marguerite	Innocence
Marigold	Jealousy
Mignonette	High character
Mimosa	Sensitiveness
Mistletoe	Perseverance

Moss	Maternal love
Myrtle	Love, triumph
Narcissus	Self-love, egotism
Oleander	Warning
Orange Blossoms	Chastity, purity (also signifies fruitfulness)
Orchid	A belle
Pansy	Tenderness, thoughtfulness
Passion Flower	Religious fervour
Pea, Sweet	Departure
Peony	Bashfulness
Periwinkle	Remembrance
Phlox	Souls united
Poppy, Red	Consolation
Poppy, White	Oblivion
Primrose	Childhood, youth (also indicates inconstancy)
Rose	Love, grace, beauty
Rose, Bridal	Happiness
Rose, China	Grace
Rose, Moss	Superiority
Rose, White	Sadness, misfortune, purity
Rose, Yellow	Infidelity
Rosemary	Remembrance
Sage	Domestic virtues
Snowdrop	Consolation
Sunflower	False riches
Sunflower, Dwarf	Devotion
Sweetbrier	Poetry, beauty
Sycamore	Curiosity
Tulip	Love
Tulip, Red	Passion
Violet	Modesty
Wallflower	Fidelity, sincerity
Water Lily	Eloquence
Weeping Willow	Forsaken
Wormwood	Absence, bitterness
Yew	Sorrow, penitence

Bachelor's-buttons.—There are some interesting traditions concerning the origins of flowers. Of the bachelor's-button, for instance, it is related among the peasants of Europe that at one time this little flower exerted a magical influence over lovers. It was the custom for young men to

carry a bachelor's-button or two in their pockets, to insure their safety and happiness in love.

According to the old tradition, the blossom was to be picked early in the morning with the dew still upon it. It was placed in the pocket where it was permitted to remain for twenty-four hours. Upon being taken from the pocket, if it were still bright and fresh—still “true blue”—the wearer would be happy in marriage with the girl he loved. If the flower faded and died in his pocket the marriage would bring misery and unhappiness. Because the flower so frequently faded and superstitious men remained bachelors rather than marry and court unhappiness, the blossom came to be known as the “bachelor's-button.” The familiar expression “true blue” originated with this superstition.

Carnation.—The carnation is an old and popular flower, having been cultivated for more than two thousand years. It is a hardy flower, and thrives even in wind and cold.

There are many meanings hidden in the petals of carnations. When worn for decoration they express a love of beauty. They are worn also to express love—the white carnation being the love symbol of Mothers' Day. When carnations are sent to a young woman by her sweetheart they carry the message of promised happiness, devotion, constancy.

Chrysanthemum.—This is a brightly coloured, late-season flower which blossoms almost until the first of the year. Most chrysanthemums are yellow in colour, some yellow tinged with red. But new chrysanthemums have recently been produced, some as small as buttons, some as large as footballs, in a variety of colourful types.

The original home of the chrysanthemum is China. About two thousand years ago the flower was introduced from China to Japan, where it quickly became a favourite. To-day the chrysanthemum is as popular with the Japanese as the traditional cherry blossom.

The chrysanthemum is a favourite in the United States, though it is used more for interior decoration than for

personal adornment. Because it is a late flower which blooms at about the time the national football games are being played, it is usually worn by the young women who attend. One of the reasons for its choice, undoubtedly, is that it is one of the hardiest flowers known and will not wilt in the sun as quickly as violets or roses.

Dahlia.—This flower derives its name from the Swedish botanist, Dahl. It was originally grown in Mexico, but is now grown in the United States. It is not a particularly popular flower, but because it expresses dignity and elegance it is used frequently for decorative purposes.

Various schools use the dahlia as an emblem.

Forget-me-not.—We are all familiar with the pretty blue flowers known as forget-me-nots. There is a delightful old legend concerning the origin and naming of these flowers.

It is preserved in German tradition that a knight and his lady love walked on the banks of the Danube the evening before their wedding day. The young lady saw a spray of beautiful blue flowers which the water apparently had dislodged, and which in a moment would be swept by the current down the stream. The flowers were so pretty that she could not see them wasted so, and she begged her lover to save them for her. He plunged into the water and grasped the flowers, but the water, as though defeated of its purpose, swirled angrily around him and suddenly swept him away with the current. As he struggled vainly to reach the shore, the knight cried to the weeping lady, "*Vergissmeinnicht!*" (Forget-me-not!) And so was the pretty blue flower given its name.

Another old tradition, now forgotten, is that a farewell gift of forget-me-nots presented on February 29th to one who departs upon a trip, brings happiness and contentment to the donor. And furthermore it insures the safety of the traveller. For a long time it was customary for friends to exchange forget-me-nots on February 29th, whether they went on trips or not; but the custom has fallen into desuetude.

Hyacinth.—"If I had but two loaves of bread I would sell one of them and buy white hyacinths to feed my soul." So did the great Elbert Hubbard express himself—he who saw beauty everywhere around him, he who had the great good fortune to know and understand the gifts of nature.

The hyacinth was once an insignificant and commonplace wild flower, with no particular beauty. It was found originally in Greece and Asia Minor, and was not brought into western Europe until the beginning of the 16th century. Dutch horticulturists experimented with the clustered flower and cultivated this simple member of the lily family until it developed into a flower of rare beauty. To-day hyacinths are grown in pink, rose, yellow, scarlet, and pure white, exquisite and highly cultivated blossoms. The finest bulbs are still grown in Holland where, as you know, gardening is a national industry.

Ancient Greece has bequeathed us this tale concerning the fragrant hyacinth. The god Apollo was on one occasion playing a game of quoits with a young mortal called Hyacinthus. Apollo dearly loved this young mortal and his happiest hours were passed in his company. While they played thus in joyous companionship, the west wind came trembling by, and Zephyrus, god of the wind, looked on in jealous anger. He hated Apollo, and in a fit of rage he caused the quoits to be blown aside. One of the quoits flew with great force against the head of Hyacinthus and inflicted a mortal wound.

In a few moments Hyacinthus died in Apollo's arms, while Zephyrus disappeared. The god grieved at the death of his friend and he decided to cause some earthly thing to grow in his memory. And so he caused beautiful clustered blossoms to spring from the drops of blood that had fallen from his friend's head, calling them hyacinths in memory of Hyacinthus.

Lily.—From the earliest times the lily has been associated with purity, truth, honour. No other flower has ever had so great a religious significance. For centuries,

artists have pictured the angel Gabriel coming to the Virgin Mary with a spray of lilies in his hand, to announce that she is to be the mother of the Christ-child. Italian artists particularly have made use of the lily as a symbol of truth, purity, and innocence.

Christianity adopted the lily as the symbol of the Resurrection, and as such it is the traditional Easter flower. The exquisite lily with its tall, slender green stalk, its crowning blossoms of pure white, its delicate fragrance, is a fitting symbol of the Easter spirit. It carries a message of purity, of majesty, of solemn joy.

Churches are decorated with white lilies at Easter time. These lilies originated in Japan and for a long time their beauty was known only to the Japanese. But about 300 years ago a flower-loving sea captain carried some of the rare white flowers to the Bermudas, from whence they gradually travelled to all parts of the world. But it is still in Bermuda that the lily is cultivated, grown in great shining white fields and shipped to the United States in time to fill the Easter demand.

The lily-of-the-valley is a beautiful flower composed of tiny white bells that nestle comfortably on broad leaves. It has a rare, delicate perfume. Though the lily-of-the-valley blossoms naturally in Europe, Asia, and America in the spring, the demand for the dainty flower for bridal bouquets, decorations, etc., is so great that hothouse cultivation is necessary. The hothouse variety is quite as dainty and lovely as that which blossoms naturally in the spring.

Laurel.—Poets have long sung to us of the flowering laurel—favourite of the ancient Greeks and Romans. In Greece twigs of the laurel tree were entwined to form a crown with which victors in the Pythian games were rewarded. And a high honour it was, indeed, so to receive the laurel crown of victory!

Borrowing from this ancient custom, the people of the Middle Ages crowned their poets with laurel wreaths.

Laurel came to be associated with all that means glory, honour, triumph, success. It was used also for decorative purposes, particularly at the time of the harvest festival, symbolizing gratitude for, and happiness in, the bounties of the land.

The story of the laurel's origin is interesting. Greek traditions tell us that the nymph Daphne was pursued by Apollo. The nymph prayed that he turn into a tree—which, promptly he did. Tradition says that it was a laurel tree into which Apollo was transformed, and so the laurel tree has been sacred to the god ever since.

Marigold.—In the Middle Ages pretty golden-yellow blossoms made their appearance in great profusion in certain parts of southern Europe. Delighted with the lovely golden flowers, the people decided to call them "Mary's gold," in honour of the Virgin Mary. From the phrase "Mary's gold" the blossoms came to be known as marigolds. They bloom late and are hardy. They are used generally for indoor decorative purposes.

Mignonette.—There was a pretty and fragrant flower in ancient Egypt which was known as *reseda*, which means "to assuage." For centuries this flower was known to no country but Egypt, and for an incredibly long time it grew in wildness, uncultivated and unnoticed.

It was not until the 18th century that the flower was introduced into France from Egypt, where it immediately became popular under the name of *mignonette*. During the same century it became popular also in England. The *mignonette* is not particularly popular in this country, although the perfume is an old favourite.

Orange Blossoms.—"Significantly from one of the most prolific of all fruit-bearing trees, orange blossoms are plainly a symbol meant to bring fruitfulness to the union," says one authority, discussing the custom of wearing orange blossoms at weddings.

This custom appears to have been introduced into Europe at the time of the Crusades. Even at that early

date, sprigs of the blossoms were worn as a crown on the bridal veil, a practice which is said to be Saracenic in origin.

The orange tree bears fruit and flowers at the same time, therefore its blossoms make an excellent symbol of fruitfulness, productiveness. The language of the orange blossoms is purity, chastity, which makes them ideal as bridal blossoms.

Rose.—There is probably no flower as popular and as beloved as the rose. As one writer expresses it: "From the time of Midas, the King of Phrygia, whose rose gardens were the wonder of the ancient world, until to-day, the rose has reigned queen of flowers."

An old tradition tells us that Venus, hurrying to Adonis with nectar, stepped upon a thorn while alighting from her chariot. Blood rushed from the wound and stained the bush, and a little nectar was spilled over it also. Where both blood and nectar mingled on the bush a beautiful red rose made its appearance.

Because of this tradition the rose has been dedicated to Venus, and is a symbol of joy, love, beauty. Still another old tradition tells us that Cupid gave a rose to Hippocrates, the god of silence, "to bribe him not to reveal the indiscretions of Venus."

It is said that the Sybarites used to sleep on mattresses stuffed with rose petals. From this long-forgotten custom came the phrase, now familiar everywhere, to sleep on a "bed of roses." In its modern significance the phrase means to have an easy life, to be comfortable, wealthy, satisfied.

SOME MISCELLANEOUS SUPERSTITIONS AND ORIGINS

There are many little things we do and say today simply because others do and say those things, but how many of us actually know what they mean, how they originated?

The phrase "Adam's apple," for instance, is used constantly by people who haven't the slightest notion as to how the phrase originated. The story is that a piece of the

forbidden apple lodged in Adam's throat, and that all men have this lump in the throat as a reminder of Adam's sin. The origin of the name is, of course, obvious.

The custom of "knocking on wood" appears to have originated in the custom of touching wood upon every occasion of happiness or good fortune in gratitude to Christ who died upon a wooden cross. Through some perverted notion of the mass mind, the custom of touching or "knocking" on wood came to be looked upon as a means of warding off ill luck. The superstition has remained and the custom is still observed. A similar type of superstition is found in Sweden where fishermen do not dare to mention to anyone during the course of the day how many fish they have caught, for they believe that if they do so they will catch no more fish that day.

We have a rather peculiar superstition, or rather tradition, that "to eat garlic gives strength." This can be traced back to ancient times in Egypt, when the pyramids were being built. The workmen were given great quantities of onions and garlic to eat, because of the belief that this food would make them stronger. Herodotus in an account of the building of the pyramids says that the workmen ate "*raphanus*, onions and garlic."

It is curious to see how logical and customary things gradually become elaborated into superstitions that are accepted, believed. For example, it is customary for children, if not carefully watched, to fall out of bed. What could be simpler to understand? The child is left alone, it rolls over and over until it finally rolls off the bed altogether. But there has existed for many centuries the superstition that a child falls out of bed at the will of the spirits that hover about it. If a baby does not fall out of bed before it is eleven months old, it will be a fool. Another curious superstition is that if a baby should happen to look into a glass before its first birthday, it will die. There are, indeed, many superstitious notions concerning infants, a few of which we list here:

If a baby smiles in its sleep, it is talking with angels.

If a child cries at birth and lifts one hand, it is born to command.

If a child's nails are cut with scissors before it is a year old, it will grow up to be a thief.

If a child cries on its first birthday, it will be unhappy throughout life.

If a child cries during baptism do not be alarmed. It is simply the devil going out of it.

If you want your child to rise in the world, carry it upstairs the day it is born.

This familiar old rhyme preserves the old superstitions concerning the personalities of various children on various birthdays:

Monday's child is fair of face,
Tuesday's child is full of grace,
Wednesday's child is sour and sad,
Thursday's child is merry and glad,
Friday's child is loving and giving,
Saturday's child must work for a living,
But the child that is born on the Sabbath day
Is blithe and bonny, good and gay.

Superstitious people believe in omens concerning the weather and the seasons. Some of the more familiar omens are:

If March comes in like a lamb it goes out like a lion.

If it rains on Easter, it will rain seven Sundays thereafter.

If it storms on Friday, it will storm again before Monday.

If the sun rises red, there will be a hot day on the morrow.

If one sees a rainbow, it is a sign of showers.

Heavy snowstorms indicate an excellent spring crop.

Large, bright stars in the winter promise a frost for the following day.

A disk or ring around the moon indicates rain or snow.

There are, of course, many bridal and wedding superstitions, some of which have already been discussed in the chapter devoted to weddings. Here are a few of the more popular superstitions, still current:

If you marry on Wednesday you will be happy; if you marry on Friday or Saturday you will be unhappy.

A double wedding means unhappiness to one of the couples.

It is bad luck to try on a wedding gown before the ceremony.

To lose the wedding ring is an omen of unhappiness.

A bride, to be happy, should step over the church sill with her right foot.

An amusing combination of warning and superstition: If you are cross when you are young, you will be an old maid!

Dreams have always interested man, and it is not surprising that through the centuries many superstitions should have been evolved concerning the things that man sees in his dreams. According to the popular notion, dreams go by contraries. For instance, to dream that someone hates you is supposed to indicate that you have gained a new friend. Here are some of the familiar dream superstitions:

Dream of death and you will hear from the living.

Dream of eggs and you will quarrel with a friend.

Dream of a nest and you will receive a gift.

Dream of a fire and you will have ill luck.

Dream of a great blaze in your home, and you will receive money.

Dream of men and you will be lucky; of women, and you will be unlucky.

Dream of marriage and you will attend a funeral.

Dream of a funeral and you will attend a marriage.

Dream of gold and you will see prosperity.

Dream of flowers and you will be ill.

Dream of a ship or an anchor and you will have good luck.

Dream of bread and you will have happiness.

Dream of a snowstorm and you will hear of the death of a relative.

Dream of an heir and you will have a misfortune.

Dream of babies and you will be unlucky.

Dream of rain and good luck is in store for you.

Dream of teeth and there will be sickness in your family.

Dream of having a tooth drawn and you will lose a friend.

Dream of catching fish and you will be very lucky.

Dream of pigs and you will have lifelong happiness.

Dream of a white horse and bad luck is on the way.

Dream of a black horse and there will soon be either a funeral or a wedding.

Dream of cutting hay and you are going to be successful in society.

Dream of a hat and you will win in whatever you undertake.

Dream of dogs and horses and you will have good luck.

Dream of a dead mother and you will have sorrow.

Dream the same thing three times in succession and it will positively come true.

It would fill a volume to quote here all the dream superstitions of the various countries. Practically all superstitious people believe in dreams, and there are many who are not superstitious otherwise but believe that dreams have "meanings." There are several so-called Dream Books which pretend to explain authoritatively the meanings of dreams.

There is a proverbial saying that when a person's ears burn someone is talking about him. One writer on superstitions says, "If your right ear burns, someone is talking well of you. If your left ear burns, he is talking ill."

This superstition is of great antiquity and is mentioned by Pliny. He says, "If our ears do glow and tingle some there be that in our absence doe talk of us."

Frequently we hear the expression "to roast" a person.

A scolding is spoken of as a "roasting." This is a relic of cannibalism when human beings actually were roasted for food. Thus among the Samoans, who at one time practiced cannibalism, to speak of "roasting" a person is the very worst language that can be used. It carries with it a grim significance. We have borrowed the phrase, have given it a place in our vocabulary of slang, and use it to indicate a scolding.

Some Food Origins.—It is said that coffee was discovered by the Sheik Omar, though whether the tale is authentic or not is still in doubt. The story is that the Sheik, starving in the desert, found some bitter berries growing on a shrub. He tried to improve their taste by roasting them, but he found to his surprise that they became very hard. To soften them he dropped them into boiling water, but they would not become soft again. The liquid, he noticed, became dark in colour. Finally, in desperation, the Sheik drank the liquid, and so discovered coffee.

According to Lamb ("A Dissertation on Roast Pig") the custom of roasting food to improve its flavour originated by accident. Bo-bo, a Chinese boy, burned down his father's hut. As he was digging among the embers, his fingers came in contact with a pig which had been roasted in the conflagration. He put his burned fingers in his mouth to cool them and tasted—for the first time—crackling.

Of course, this is just a myth made popular by Lamb. The true story of the origin of roasting or cooking food goes back very much farther. It is very possible that man discovered the value of "putting food through fire" when he began to make animal sacrifices to the deities. We can imagine a tribe of primitive men frightened by a great storm, or a drought, or some other calamity. Believing that in some way they have angered the deities of their tribe, they decide to soothe their ruffled feelings by making gift offerings in the form of food.

To leave the food on a scaffold or on the ground would be unsafe. The prowling animals would get it before the gods. Therefore they conceived the idea of burning the food so that its fragrant smoke would rise up to the sky and delight the nostrils of the deities.

But the burning food delighted the nostrils of mere mortals, too! And so we find man cooking his own food, roasting in fire the meats he had formerly eaten raw (See chap. XIII).

Someday someone may write a book on the meanings and origins of our words for various foods—bread, coffee, cake, potatoes, meat, carrots, onions. Behind each name there is a long history and an interesting origin. To give but one example, let us choose the word "halibut." In the old Saxon days a fish was called a "but." Taken into the German language, the word came to be "Butte." In England, at a later date, the word "halibut" was originated, meaning "holy fish," *i.e.*, fish that is eaten as a holiday dish on feast days. The halibut is still a special holiday fish in England.

Heaven and Hell.—We have already discussed at length the notions concerning a heaven and a hell. Now let us see how the words themselves originated, what they mean.

Ralph Waldo Trine tells us that the word heaven means *harmony*. The word *hell* originally meant to build a wall around, to separate. Thus to be *helled* off meant to be shut off.

Public Libraries.—The public library does not belong to modernism as many of us are inclined to think. Recent excavations at Nippur in Babylon have laid bare a library dating from about 3000 B. C.—meaning that this library is about 5000 years old! The "books" are clay tablets upon which are inscribed important information which the scribes of the day wished to preserve.

The greatest library of antiquity was that of Alexandria. The "books" were in the form of great parchment rolls, indexed and placed on shelves for all the world like a

modern library. Vast quantities of these parchment rolls were housed at the Alexandrian library where students, teachers, and everyone who could read came for "research."

The library was founded by the Ptolemies and was destroyed in the early centuries of the Christian Era. Its loss is a great misfortune, for the parchment rolls and their information would have been of inestimable value to the modern student of ancient times.

Bookkeeping is very ancient. But the earliest bookkeeping was simply entry of items on a clay tablet or a parchment roll. It was not until 1495 that Luca di Borgo, in Venice, wrote in detail of double-entry bookkeeping and its advantages. An English book on the subject, the first of its kind to appear, was published in London in the year 1543 and was written by a bookkeeper known as John Gowgne.

Pin Money.—For a long time after the invention of pins, in the early 14th century, makers were allowed to sell them only on the 1st and 2d of January. The reason for this regulation was that women, delighted with the novelty and the usefulness of the pins, spent money intended for household purposes to secure them. They were extremely expensive, and only the wealthy could really afford them, but everyone bought. Therefore the regulation became necessary, and the custom originated of placing aside a bit of money every now and then so that one would have sufficient to buy pins on January 1st and 2d. This money came to be known as "pin money."

The phrase has remained, and even we frequently refer to small amounts of money, intended for trifles, as "pin money."

The Barber's Pole; Tipping.—Why do barbers use red-and-white poles as a sign of their profession? Have you ever wondered? Have you ever guessed?

It was at one time customary for barbers to perform minor operations in surgery. During the era when bleed-

ing was regarded as a cure for most ills, it was to the barber that people applied to be bled. It was necessary, in this operation, for the patient to grasp a staff or pole, and such a pole, with bandaging to tie the patient's arm, was always kept in readiness.

When the pole was not in use the bandaging or tape was fastened to it and both were placed at the door as a sign, or symbol, that the barber was proficient in bleeding. As a later development it became customary to use a pole painted with stripes around it, instead of the identical pole used in the operations. Red stripes were used to indicate blood-soaked bandages.

Thus the red-and-white barber poles are relics of the crude staffs and bandages used by barbers in ancient times during bleeding operations.

Tipping appears to have originated with barbers, for we are told that they received no definite payment for the bleeding operation. The patient tipped the barber whatever he was able to afford, or whatever he felt the operation was worth. England took up the custom of tipping, or feeing, finding it an excellent means of securing quick and efficient service. There appeared presently small boxes hung conspicuously in inns and road houses, above which appeared signs bearing the slogan "*To Insure Promptness.*" From the initial letters of these three words is derived our word "tip." The box "*To Insure Promptness*" has disappeared, but the tip has remained, developed, and become a universal custom.

How Ireland Got Its Name.—There is an old Celtic legend which tells us how the name of Ireland originated.

According to this old legend, the famous Emerald Isle was originally altogether submerged, except during brief periods every seventh year. During the time the island appeared above the surface of the water it looked so green and beautiful and tempting that many bold people attempted to build homes and remain upon it. But always, after the brief period, the lovely green island was swal-

lowed up by the sea again and disappeared for another seven years.

Then, on one great occasion, there appeared a heavenly apparition, and it was declared to all that the island could be rescued from the sea only by planting a shaft of iron in its heart the next time it appeared above the water. Iron was believed at that time a sacred and luck-bringing metal.

When the island appeared above the water the next time, a bold and daring adventurer proceeded upon it and buried his sword in its heart. The spell was dissolved. The island was not swallowed up by the waves again, as it had been so many times before, but settled itself comfortably upon the surface of the sea—and there it has remained ever since.

Because of this myth the island came to be known as Iron-land, or Ireland. One writer says it is because of this tradition that "iron is always accounted lucky by the Irish, and when a bit of iron is found in the form of a horseshoe it is nailed for luck above the house door."

Man's Lighting Devices.—Man has always feared the dark, for it was in the dark of night, way back in primitive times, that fearsome animals stole upon the tribe and carried off one or two struggling humans. It was, indeed, in the dark of night that most of the terrible things of primitive life happened to man. And so, man has always attempted to pierce this darkness, to dispel it with light of his own making.

The first lighting apparatus was simply a burning brand snatched from the campfire. The earliest lamp was a hollowed stone, shell, or skull filled with animal fat or fish oil as fuel, and reeds, rushes, or a twist of vegetable fibre as the wick. Lamps such as these are used by the Eskimo even to-day.

In Greece and Rome the dim, smoky lamp made its appearance at a fairly early date. It was a shallow dish, round or oval in shape, with a handle at one end and a spout for the wick at the other. It was made of baked

earth or metal, and the wick was made of tow or cloth. These lamps, used chiefly by students and teachers, are the traditional "lamps of learning" to which reference is frequently made.

Candles are of great antiquity. They were at first simply crude cylinders of wax or solid fatty matter rolled around a vegetable fibre or bit of twisted cloth for a wick.

It was not until 1783 that the flat lamp wick was introduced by M. Legers of Paris. It made possible for the first time a smokeless lamp, and it had a spur wheel for regulating the flame and adjusting the wick. In 1784 a Swedish chemist improved this invention, and soon afterward the use of the glass chimney was discovered.

The early New England colonists used a flat, iron, pear-shaped lamp known as the "Betty Lamp." But Benjamin Franklin contrived a very much superior lamp of two round wick tubes, suggesting wicks of braided cotton. About 1865 the double burner was introduced and became extremely popular.

The next step in the development of illumination came in 1817 when gas light began to be used in the United States for the first time. This proved to be the best light thus far invented, and its use quickly spread. The electric light replaced gas light, and is superior to any other kind of illumination. It is safe, bright, attractive, and less expensive than even candlelight.

The Story of Coinage.—One of the most deeply rooted customs of civilized man is the use of coins, and government notes representing coin, in the business of buying and selling. From Robert Mushet's "History of Coinage" we quote the following:

Money is a measure of value and medium of exchange; coinage is the art of fabricating money.

As soon as nations emerge from a state of barbarism, when simple barter no longer suffices to meet their wants, they will invent some common or conventional measure of value by which to exchange their products and carry on their commerce. In the rude ages of society, cattle are said to have been the common medium of commerce; and

among the patriarchs of old they were the measure of man's wealth and greatness. The armour of Diomedes, says Homer, cost only nine oxen; but that of Glaucus cost a hundred oxen. In some countries, in former times, salt was the measure of value and instrument of exchange; and in others shells formed the circulating medium. But as the necessities of nations multiply, and their commercial transactions extend, they soon discover the inadequacy of these means, and will search for something of a more steady and durable character, which shall serve both as a circulating medium, as well as a medium of exchange with other countries trading with them.

From a very early period metals, as possessing that character in a high degree, were chosen to perform these important functions. They are not only less perishable than other articles, but they can, without loss, be divided into any number of parts, and be united again by fusion; they can be hammered or rolled into plates, and moulded into any shape; and occupying less bulk than other articles, they are easily transported from place to place.

Thus briefly and completely does Mr. Mushet, an authority, give the reasons for the use of gold and silver as coinage for a means of exchange and for use in commercial transactions. Copper and iron as well as gold and silver were used by ancient peoples, but gradually the two latter metals alone remained and took the form of coins.

The bills with which we are familiar are simply promissory notes given by the government and entitling the bearer to gold or silver on demand. The gold and silver, which would be cumbersome and inconvenient to carry around in bulk, are kept in the treasury and the light bills carried in their place. Of course, the bills are accepted as "legal tender" by everyone because the government promises to pay gold or silver to the holder on demand.

The history of money and of coinage is fascinating, and we have barely touched upon it here. There are many interesting books on the subject, however, and most of them are available at the public libraries.

Wall Paper.—Few of us realize how wall paper came into being. The story is an interesting one.

For a long time the walls in homes were covered with rich tapestries to hide the bareness. These tapestries were

made by hand and were, of course, extremely valuable. Therefore only the wealthy could afford them.

In feudal times the walls in the castles and in the homes of the mighty were covered with rare and costly tapestries, while the walls of those whose homes were humble had to remain bare and ugly. This condition remained for many centuries, until finally some clever persons conceived the notion of imitating tapestries in heavy paper and covering bare walls in this manner. In 1790 John B. Howell established the first wall-paper factory in the United States. These paper imitations of tapestries were at first quite expensive, though very much less expensive, of course, than actual tapestries. After much experimenting a cheap type of wall paper was perfected, and by the beginning of the 19th century pretty and colourful papers for the walls came into general use.

To-day wall papers are made, not only in imitation of rare old tapestries, but in floral and conventional designs. Some papers are even of pure white, or cream, or solid tones of blue, yellow, pink, etc. The art of creating wall papers has reached a high degree of perfection, and now even people in the most humble circumstances can afford to have the walls of their homes neatly, if not extravagantly, covered.

Days of the Week.—How did the days come to get their names? What does Friday mean, Tuesday, Sunday?

The names of the days of the week are Anglo-Saxon in origin and have the following meanings:

Sunday: The Sun's day, in honour of the sun.

Monday: The Moon's day, in honour of the moon.

Tuesday: Tiw's day, in honour of Tiw, an old Teutonic deity.

Wednesday: Wodan's day, in honour of Wodan, the old Teuton and Norse god. (Some believe it means Venus' day, in honour of Venus.)

Thursday: Thor's day, in honour of Thor, the Norse god of thunder.

Friday: Freya's day, in honour of the German virgin goddess.

Saturday: Saturn's day, in honour of the god Saturn.

Tuesday was once known as Marsday, for the Teuton god of war (Tiw) was considered identical with the Roman god of war, Mars.

THE NAMING OF THE STATES

It is interesting to trace the origins of the name that our states bear. The following table gives the names of the states in alphabetical order, with the origin and meaning of the names beside them. We are indebted to Compton's "Pictured Encyclopedia" for most of this information:

Alabama: From an old Creek Indian word meaning "place of rest."

Arizona: From an Indian word meaning "place of small springs."

Arkansas: From the name of an old Indian tribe; no particular meaning that is known.

California: From *caliente forno* (hot furnace) originally applied to Lower California. Probably also from the name of a fabled island in Spanish romance.

Colorado: From a Spanish word meaning "reddish colour"; first applied to the Colorado river and later to the entire state.

Connecticut: From the name "Quonoktacut" given to the river by the Indians.

Delaware: From Lord de la Warr, first governor of Virginia.

Florida: From *Pascua florida* (flowery feast) Spanish for "Easter Sunday."

Georgia: In honour of King George II of England.

Idaho: From an old Indian word, meaning "gem of the hills."

Illinois: From French interpretation of the Indian word "Illini," meaning *men*.

Indiana: From the word "Indian." The meaning of the name is probably "land of the Indians."

Iowa: From an Indian name meaning "sleepy waters"—a name given by the Indians first to the river, and later applied to the state.

Kansas: From an Indian tribe called "Kanzas." The meaning of the word is "wind people."

Kentucky: From an Indian name "Kentake" meaning "prairie" (uncertain).

Louisiana: In honour of King Louis XIV of France.

Maine: From charter of 1622 where land is called "Province of Maine," probably from name of Province in France.

Maryland: In honour of Queen Maria of England.

Massachusetts: From Indian name meaning "great hills."

Michigan: From Indian name meaning "great water."

Minnesota: From Indian name meaning "clouded water."

Mississippi: From Indian name meaning "gathering waters."

Missouri: From Indian name meaning "muddy stream."

Montana: From Spanish word meaning "mountain."

Nebraska: From a Sioux Indian name meaning "shallow water."

Nevada: From a Spanish word meaning "snowy."

New Hampshire: Named for the county of Hampshire in England.

New Jersey: Named for the island of Jersey in the English channel.

New Mexico: From the Indian name "Mexitl," an old Aztec divinity.

New York: In honour of the Duke of York (later James II of England).

North Carolina: In honour of Charles II of England.

North Dakota: From Indian name meaning "allies."

Ohio: From Indian name meaning "beautiful river."

Oklahoma: From Choctaw Indian name meaning "red people."

Old Athenian box of the school of the "Meidias Painter." Exterior shows girl athlete balancing a stick.

- Oregon:* From name given to Columbia River, popularized in "Thanatopsis" (Bryant).
- Pennsylvania:* In honour of the founder, William Penn. The name is the Latin form for "Penn's woods."
- Rhode Island:* From the Dutch "Roode Eylandt," meaning "red island."
- South Carolina:* In honour of Charles II of England.
- South Dakota:* From Indian name meaning "allies."
- Tennessee:* From Indian name given to the river, meaning unknown.
- Texas:* Named for the Texas tribe of Indians.
- Utah:* Named for the tribe of Ute Indians.
- Vermont:* From a French word meaning "green mountains."
- Virginia:* In honour of Elizabeth, virgin queen of England.
- Washington:* In honour of George Washington.
- Wisconsin:* From Indian name meaning "meeting of the rivers."
- Wyoming:* Named for the Wyoming valley in Pennsylvania (scene of the Indian massacre of 1778).

POPULAR PHRASES

There are many phrases which we use constantly in our conversation without knowing what they mean or how they originated. Some of these phrases have become "slang," although at one time they carried an important and dignified meaning. There are old and interesting traditions behind most of these popular phrases.

The phrase "blue blood," for instance, can be traced back to the time of the Moorish conquest. There are old families of Spain that trace their pedigrees even beyond the time of the conquest, claiming that at that time the blood of the common people was of a muddy hue, while those who belonged to the pedigreed families had blood of pure blue. Now it is customary to refer to people with notable pedigrees as "blue-blooded."

We speak of "lynching" people, but how many people know how the word originated? During the Revolutionary War an American planter by the name of Charles Lynch illegally put to death some Tories. Thereafter, whenever any one was hanged or otherwise put to death without the sanction of the law, the event was referred to as a "lynching." Through constant usage the word has become familiarized and is now a part of the language.

The phrase "bury the hatchet" obviously derives from the actual ceremony of burying the hatchet, practised symbolically by the Indians to indicate their willingness to be friendly. One writer says:

Tickling the soles of a prisoner—a form of torture practised by the early Chinese. From this custom has come our popular expression "tickled to death."

The Great Spirit commanded the North American Indians when they smoked the calumet, or peace-pipe, to bury their hatchets, scalping knives and war-clubs in the ground that all thought of hostility might be buried out of sight.

We still use the phrase "bury the hatchet" when we wish to indicate peacefulness, friendly relations, usually after a quarrel.

You Are a Brick.—In his "Life of Agesilaus" (King of Sparta) Plutarch tells this story, which indicates the origin of the phrase "a perfect brick" or "you are a brick" as used in modern slang:

On a certain occasion an ambassador from Esperus, on a diplomatic mission, was shown by the king over his capital. The ambassador knew of the monarch's fame, knew that though only nominally king of Sparta, he was ruler of Greece, and he had looked to see massive walls rearing aloft their embattled towers for the defense of the town, but he found nothing of the kind. He marvelled much at this, and spoke of it to the king. The following conversation took place:

"Sire," he said, "I have visited most of the principal towns and I find no walls reared for defense. Why is this?"

"Indeed, Sir Ambassador," replied Agesilaus, "thou canst not have looked carefully. Come with me tomorrow morning and I will show you the walls of Sparta."

Accordingly on the following morning the King led his guest out upon the plain, where the army was drawn up in full array, and pointing proudly to the serried hosts, he said:

"There thou beholdest the walls of Sparta—ten thousand men, and every man a brick!"

A Feather in One's Cap.—Among the Sioux Indians of North America it was the ambition of every young brave to earn the "feather"—the greatest honour possible. The "feather" was awarded for distinction, for bravery in war, etc., and it was highly coveted. When won, it was worn on the head, and each new feather was added to it. Thus the value of an Indian brave was estimated by the number of feathers in his "cap."

We find this same custom among the Hungarians. In the Lansdowne manuscript in the British Museum we find a description of Hungary in 1599 in which the writer says:

It hath been an ancient custom among them that none should wear a fether but he who had killed a Turk, to whom onlie it was lawful to shew the number of his slain enemys by the number of fethers in his cappe.

From customs such as these has originated the now familiar phrase "to wear a feather in one's hat."

When in Rome, Do as the Romans Do.—This old phrase is used constantly in modern life to indicate adapting oneself to one's environment. It has an ancient origin that can be traced in Church history to the time of St. Austin.

The story is that Milan and Rome differed in the matter of keeping the Sabbath. At Milan the old custom prevailed of making of Saturday a festival. In Rome the Sabbath was kept as a fast day. St. Austin, who had occasion to visit both Rome and Milan did not bother much about the matter, but it perplexed and annoyed his mother, Monica. Therefore he agreed to go to St. Ambrose for advice, and the legend is that St. Ambrose said to him: "When I am at Rome I fast as the Romans do; when I am at Milan I do not fast. So likewise you, whatever church you come to, observe the custom of the place if you would neither give offence to others nor take offence from them."

A Thorn in My Side.—Among savage peoples it is customary to use a curious expression of some sort in reference to one's wife, for to use her right name would bring misfortune and unhappiness to the household. Thus, among the Tuyangs a man never uttered his wife's name but referred to her by a special word which, when translated, means "my dull thorn" or "the thorn in my ribs."

It would appear that our phrase "a thorn in my side" originated with this old Tuyang custom.

Kick the Bucket.—The phrase "to kick the bucket" is slang for death, but it has a perfectly legitimate origin.

The Egyptian word for kick is *Khekh*, meaning to recoil, to return, to send back. Therefore to *Khekh* the bucket in the Egyptian hieroglyphics indicates or symbolizes the return of an empty bucket—*i.e.*, a body without life. The Egyptians used the bucket constantly in their hieroglyphics as a symbol of death.

This is but one instance of slang interpretation of the symbol language. A lifetime might well be spent in gathering the lore and the tales of various countries and interpreting them in relation to modern usage.

The Greenhorn.—This familiar slang phrase had its origin during the reign of Louis XIV of France. A law was passed compelling all bankrupt Hebrews to wear small

pointed caps or hats made of green cloth. This green cap was the badge of bankruptcy, and its purpose was to warn people from doing business with the wearer.

For a period of about twenty years these green hats were worn, and if an insolvent Jew appeared in the streets without one, he was liable to be seized by his creditors and thrust into a dungeon.

Progress and tolerance have robbed the expression of its original meaning, but the phrase "greenhorn" has remained and is used now to denote a person "bankrupt" in brains rather than in business.

Baker's Dozen.—This phrase carries us back to the time when there was much difficulty concerning "short weight" in bread. The City of London made special provision that an extra piece of bread be given after weight, so that there would be no difficulty.

Consequently twelve pieces of bread, with one extra piece to prevent insufficient weight, came to be known familiarly as the "baker's dozen." The phrase is still in use, but is more familiar in England than it is in the United States.

Nothing New under the Sun.—Here is a popular phrase which traces its origin back to the sacred narrative. In Ecclesiastes (I, 9) we read:

That which hath been is the same which will be; and that which hath been done is the same which will be done; and there is nothing new under the sun.

In the Book of Job we find another familiar phrase—"Skin of your teeth." Both these phrases are in constant use to-day.

The phrase "catch our hare before we cook him" is an old English proverb made popular by Hannah Glasse. Hannah was a cook of no little reputation, and in 1747 she published a cookery book filled with rare and interesting old recipes. In one recipe, of which the hare is the principal ingredient, she says, "And we must catch our hare before we cook him."

Adding Insult to Injury.—Many of us use this phrase, but few know how it originated. There is little doubt that the now popular expression originated in this bit of philosophic humour by Phaedrus, known as "The Bald Man and the Fly":

A fly bit the bare pate of a bald man who, endeavoring to crush it, gave himself a heavy blow. Then said the fly, jeeringly: "You wanted to revenge the sting of a tiny insect with death; what will you do to yourself, who have added insult to injury?"

Blarney.—The famous Blarney Stone is a relic of an ancient castle of Blarney in Ireland.

It is a triangular stone suspended from the north angle of the castle, about twenty feet from the top. According to a tradition of the country, the castle was besieged by the English under Carew, Earl of Totness, who, having concluded an armistice with the commander of the castle on condition of its surrender, waited for the fulfilment of the terms, but was put off from day to day with soft speeches instead, until he became the jest of Elizabeth's ministers and the dupe of the Lord of Blarney.

From this story comes our slang term "blarney" referring to jesting or to untruths. And "kissing the Blarney Stone" has become a popular synonym for flattery and for smooth, deceitful words.

Pouring Oil on Troubled Waters.—In his "Natural History" Pliny (1st century of Christian Era) speaks of the excellent results to be secured through pouring oil on troubled waters, indicating that as oil will smooth a stormy sea so will soft words smooth a ruffled, angry personality. Another interesting account of the so-called "phenomenon" is noted in Bede's "Ecclesiastical History" (book 3, chapter 15) written in Latin more than eleven centuries ago.

The familiar phrase "No royal road to learning" is accredited to Euclid, father of mathematics, who was born at Alexandria about 300 B.C. On one occasion the famous mathematician was asked, by Ptolemy Soter, who was then his student and later became the King of Egypt, if geometry could not be made easier. Euclid without a

moment's hesitation replied, "There is no royal road to learning!"

There's Many a Slip.—A tradition tells us that Ancæus, King of the Leleges in Samos (an island in the Grecian Archipelago) planted a vineyard. Because he oppressed and ill-treated his slaves, one of them prophesied to him that he would never live to taste the wine.

When the wine was made the King sent for the slave who had made this prophecy and said, "What do you think of your prophecy now?" The slave looked at him intently for a moment, and said, "There's many a slip 'twixt the cup and the lip." At this moment a man rushed in to inform Ancæus that a wild boar had broken into his favourite vineyard and was laying it waste. The King placed his cup aside, untasted, and hurried out to attack the boar and drive it from his vineyard. In the encounter he was killed, and the slave's prophecy was fulfilled.

Robbing Peter to Pay Paul.—This phrase had its origin in the rivalry which existed between St. Peter's Cathedral (now Westminster Abbey) and St. Paul's Cathedral in London.

The story is that in 1550 an appropriation was made from St. Peter's to make up a deficiency found in the accounts of St. Paul's. This action instantly met with opposition, and the people demanded, "Why rob St. Peter to pay St. Paul?"

For a while the phrase was forgotten, lost, but it was revived in the 18th century upon the death of William Pitt (Earl Chatham). Both the cemetery of St. Paul's and the cemetery of St. Peter's (Westminster Abbey) claimed the honour of his burial. The City of London argued that so great a statesman should be buried in the sacred earth of St. Paul's, but Parliament declared that if he were not buried in Westminster Abbey they would again be "robbing St. Peter to pay St. Paul." Finally the dispute was settled in favour of Westminster Abbey, and since then the phrase "robbing Peter to pay Paul" has been in popular use.

Blackball.—The blackball is a vote by ballot against the election of a candidate for membership in a club or other association. The origin is interesting.

In ancient times, small black and white balls were used to represent votes against and for a candidate. This method of using balls is now obsolete, but the word "blackball" remains and is used in the manner indicated.

The origin of the word "windfall" in the sense of "good luck" dates back to the time of William the Conqueror. It was at that time a criminal offence to cut timber in the forests, and only such timber could be gathered as the wind had blown down. A great windstorm was hailed by the peasants as a piece of great good fortune, for there would be much timber to gather after the storm. This good fortune was referred to as a "windfall," and the word has been preserved with its original meaning to this very day, although the modern application refers to luck in general, rather than to luck in gathering timber.

Man in the Moon.—Harold Bayley in his "Lost Language of Symbolism" advances a theory for the origin of the myth of a man in the moon. He tells us that the Egyptians personified the moon as masculine, and identified it with Troth, the pathfinder and awakener of sleeping minds. Presumably it is the face of Troth—the man in the moon—that we see!

Plutarch wrote a treatise on the "Face in the Moon" in which he relates an interesting fable. The good, he says, go to the moon and enjoy perfect tranquillity. But "should anyone whose purification was incomplete attempt to force his way thither, he was frightened away by the apparition of a terrifying and appalling face." Mr. Bayley suggests that this myth was probably originated to deter premature entrance into the next world "by the unlawful method of suicide."

Science tells us that the Man in the Moon is really nothing more nor less than great mountains which can be seen distinctly through powerful magnifying glasses

Crocodile's Tears.—There is an old tradition that crocodiles moan and sigh like a person in distress when they wish to lure travellers to the spot. It is said that they even shed tears while in the very act of devouring the prey.

Because of this tale, which has never definitely been proved true, hypocritical tears are called "crocodile's tears." The phrase is frequently used in modern life.

The odd simile "dead as a doornail" is explained by one authority in this manner:

Doors of the 16th and 17th centuries were furnished with nails upon which the knockers fell; hence the phrase is used to denote one irrecoverably dead—death as reiterated strokes on the head would produce.

Shakespeare uses the phrase. He has Pistol remark to Falstaff that the King is as dead as "the nail in the door."

From Æsop's Fables.—Æsop, from whom we quote probably more than from any other writer, is supposed to have lived from about 620 to 560 B.C. He was a slave, said to have belonged to Iadmon of Samons. Despite the hardships of his life he was able to write of the things he saw and heard about him, and he has bequeathed us a rare legacy of simple, wholesome philosophy. Many of the proverbs, familiar phrases, and even some of the slang we use to-day originated with the slave Æsop who lived thousands of years ago.

Here, for instance, is a typical Æsop fable called "The Fox and the Lion":

A fox who had never seen a lion, when by chance he met him for the first time, was so terrified that he almost died of fright. When he met him the second time, he was still afraid, but managed to disguise his fear. When he saw him the third time, he was so much emboldened that he went up to him and asked him how he did. Familiarity breeds contempt.

That last sentence, "Familiarity breeds contempt," is quoted frequently to-day. It is but one of the keen, sugar-coated bits of wisdom that is part of our inheritance from

Æsop. Some of the other phrases which he originated, and which we quote to-day, are:

Look before you leap.

Figures are not always facts.

Winter finds out what Summer lays by.

There is no arguing a coward into courage.

Men are blind to their own faults.

Give me less of your currying and more of your corn.

Grasp at the shadow and lose the substance.

Those who cry loudest are not always the most hurt.

A tyrant never wants a plea.

Better save a man from dying than salve him when dead.

They who lay traps for others are often caught by their own bait.

It serves you right (an idiomatic phrase originated by *Æsop*).

For me a dry crust with liberty against a king's luxury with a chain.

Pride shall have a fall.

Slow and steady wins the race.

One man's meat is another man's poison.

Necessity is the mother of Invention.

Keep to your place and your place will keep you.

Example is better than precept.

There can be little liking where there is no likeness.

Better be wise by the misfortunes of others than by your own.

What are blessings in freedom are curses in slavery.

Quality comes before quantity.

The lights of heaven are never blown out.

A bird in the hand is worth two in the bush.

He who plays a trick must be prepared to take a joke.

Union is strength.

Revenge is too dearly purchased at the price of liberty.

Honesty is the best policy.

Nip evil in the bud. Spare the rod and spoil the child.

The smaller the mind the greater the conceit.

It is one thing to propose, another to execute.

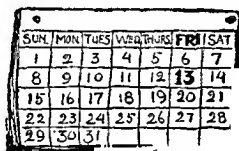

One good turn deserves another.

Facts speak plainer than words.

Wise men say nothing in dangerous times.

These are just a handful of the more familiar of *Æsop's* sayings. What a wealth of wisdom to crowd into one short lifetime! And behind each of these sayings is a delightful fable, a myth, a story if you will—the sugar

coating that makes his wisdom easy to take, pleasant to swallow. He writes of bears, of lions, of dogs, of mice, of mountains, but mirrored in his tales are the doings and sayings of human beings. And we cannot fail to see that the doings and sayings of the human beings of his day are not so far removed from the doings and sayings of to-day.

CHAPTER XX

SURVIVALS IN GAMES

If the earth were struck by one of Mr. Wells's comets, and if, in consequence, every human being now alive were to lose all the knowledge and habits which he had acquired from preceding generations (though retaining unchanged all his own powers of invention and memory and habituation) nine-tenths of the inhabitants of London and New York would be dead in a month, and 99 per cent of the remaining tenth would be dead in six months. They would have no language to express their thoughts, and no thoughts but vague reveries. They could not read notices, or drive motors or horses. They would wander about, led by the inarticulate cries of a few naturally dominant individuals, drowning themselves, as thirst came on, in hundreds at the riverside landing places, looting those shops where the smell of decaying food attracted them, and perhaps at the end stumbling upon the expedient of cannibalism. Even in the country districts men could not invent, in time to preserve their lives, methods of growing food, or taming animals, or making fire, or so clothing themselves as to endure a northern winter.

—GRAHAM WALLAS.

PLAYING WITH LIFE

MAN woke to life in a strange world. He saw animals of many species, and creatures of his own kind. But for one long age he lived a life within himself, finding food when he was hungry, searching shelter when storms rocked the earth, climbing to a safe sleeping-place when the sun dropped behind the mountains. He shunned the animals that prowled everywhere about him; and shunned with even greater fear the creatures like himself.

But gradually man became accustomed to the world in which he found himself. He paused for a moment to watch a lion mother play with her cubs. He looked into the sky and saw birds riding on the wind. He passed through a jungle and heard monkeys jabbering in the tree-tops, mimicking one another, swinging from slender

branches high above the ground. He studied the ants that hurried in battalions across a square inch of earth; peered into a hollow tree which swarmed with insect life; watched a pair of brown bears roll together gleefully on a slope.

And man moved closer to his own kind. Nature taught him companionship.

In companionship play was inevitable. All creatures of the earth play when they are together. At first it was with curious bits of shell that man amused himself, colourful bits of mystery swept up by the sea; and with sticks that crossed through some curious freak of nature; with stones that were marked in unusual ways; with nuts that fell from the treetops—with the many wonderful things of nature.

And while man played so in primitive times he learned about the world in which he lived. He played with life. He had the whole world for his playground, and all the glorious gifts of nature for his playthings. Unlike the cubs that rolled on the ground, the monkeys that jabbered in the treetops, he learned while he played. Reason entered play as it entered every other development of human life.

There came a time when man tired of the knucklebones, the dice, the skulls with which he played. He began to play with his own gifts—running races with feet as fleet as any animal's, wrestling, matching his skill and strength against the skill and strength of others. He discovered his voice and matched it with the voice of the birds, the animals. Here was a new kind of play. And here again man reasoned while he played, learned, developed.

Then came playthings of man's own invention—balls to throw and catch, clubs to serve more peaceful purposes than warring, draughts, kites, dolls, clever playthings that no lion mother ever invented for her cubs, that no monkeys ever enjoyed in their treetops. These playthings of man's creation came to be used in games reasoned out by the mind of man—ball, draughts, chess—games in which skill and reason are necessary. Through these games man devel-

oped. While lions still romped and monkeys still jabbered, man reasoned out ever more skillful games to play, ever more difficult games to tax his powers of reasoning. And as a tool is sharpened by constant use, so were man's reasoning powers sharpened through use in his games of skill.

Throughout the long ages man has played with life and with the things of life. There was a time when he played with forked branches cut from the tree, and from this play there developed the use of the fork, the important discovery of the plough. There was a time when man played with shells over which he drew vegetable fibres, bits of twisted moss—and from this play evolved the harp, the lyre, and other musical instruments. Man played with kites, and the sailboat resulted. Man played with the lightning, and electricity was harnessed. Man played with the air waves, and the radio made its bow.

And so through long ages of development man has played, and learned, and made the world more interesting. We have to-day mechanical toys that are marvels of science and invention; racing cars that put to shame the chariots of another age; dolls that walk, and talk, and sleep. But they are playthings—just as the little wooden doll fondled by an Egyptian baby of long ago, or a string of shells dangled by some primitive infant, were playthings. The difference is in man and his development rather than in the playthings themselves.

After all, we are but children playing at being grown up. The many popular games we play to-day are but elaborate survivals of the early playdays of humanity.

THE GAMES OF GREECE AND ROME

It is to Greece that we must look for the greatest development of the ancient games.

The earliest games of which we have any record are those at the funeral of Patroclus, which form the subject of the 23rd Iliad.

They are noteworthy as showing that Greek games were in their origin clearly connected with religion; either, as here, a part of the funeral rites, or else instituted in honor of a god, or as a thank-offering for a victory gained or a calamity averted, or in expiation

The high bicycle which was popular about 1880

of some crime. Each of the great contests was held near some shrine or sacred place and is associated with some deity or mythical hero. . . . The games of the Iliad and those of the Odyssey at the court of Alcinous are also of interest as showing at what an early date the distinctive forms of Greek athletics—boxing, wrestling, putting the weight, the foot and the chariot race—were determined. ("Encyclopædia Britannica.")

The Olympian games of Greece are more familiar to us than any other game of antiquity. Olympia was a spot in the rich plain of Eli, naturally enclosed, where the games took place and where statues of the victorious athletes were erected. Games were held every four years at Olympia, the chief sports being foot races, boxing, wrestling, javelin throwing, quoit throwing, jumping, chariot and horse racing. Every recurring fourth year was known as the "Olympiad" meaning the year in which the Olympian games took place, and starting from the year

776 B. C., when the Eleians engraved the name of Coroebus as the victor in the foot race, we have an unbroken record of games held regularly for over a thousand years.

The Greeks had also the Pythian games (from Pytho, the original name for Delphi) which were limited to musical competitions. The prize was a chaplet

of laurel. In the Nemean games a wreath of wild celery was the coveted prize. The Isthmian games, held on the Isthmus of Corinth, included gymnastic, equestrian and musical contests, and the prize was a crown of pine. Our authority says of these games that

Their early importance is attested by the law of Solon which bestowed a reward of 100 drachmae on every Athenian who gained a victory.

The Romans were as fond of games and sports as were the Greeks, but their spectacles and exhibitions were really shadows of the Olympia and the Pythia. As in everything else, the Romans patterned themselves after their Greek neighbours.

Concerning the *Ludi Publici* of the Romans, the Encyclopædia Britannica says:

As in Greece they were intimately connected with religion. At the beginning of each civil year it was the duty of the consuls to vow to the gods games for the safety of the commonwealth, and the expenses were defrayed by the treasury. Thus, at no cost to themselves, the Romans were enabled to indulge at the same time their religious feelings and their love of amusement.

Their taste for games naturally grew till it became a passion, and under the Empire games were looked upon by the mob as one of the two necessities of life. . . . But though public games played as important a part in Roman as in Greek history and must be studied by the Roman historian as an integral factor in social and political life, yet, regarded solely as exhibitions, they are comparatively devoid of interest, and we sympathize with Pliny who asks his friend how any man of sense can go day after day to view the same dreary round of fights and races.

As early as the 6th century B. C. there were "reformers" who objected to the games which were so extravagant in display and which were regarded as a necessity by the masses. Xenophanes complains that "the wrestler's strength is preferred to the wisdom of the philosopher." And as everyone knows Euripides "holds up to scorn the brawny, swaggering athlete."

The cup and ball, a great favourite in the time of Henry III, of France.

GAMES WITH BALLS

The ball is one of the oldest playthings of man. The ancient Egyptians made balls of leather or skin, sewed with string crosswise and stuffed with bran or with husks of corn. These balls were very similar to the modern baseballs, lacking only the cork centre. Some of the ancient balls found at Thebes are about three inches in diameter. Others are very much larger and are made of string or of the stalks of rushes, plaited together to form a circular mass and covered with leather.

The Egyptians played handball—throwing and catching it as children play to-day. This game of handball is probably the oldest ball game known, but the ball itself gave origin to many popular pastimes.

Most authorities accredit the discovery of the ball to Greece, although it is now definitely known that the Egyptians had and used balls at a very much earlier period. Herodotus attributes the invention to the Lydians. Many writers are of the opinion that a woman name Anagalla, a native of Corcyra, was the first to make a ball for the purpose of pastime.

An old tradition is that Anagalla presented the ball she created to Nausicaä, the daughter of Alcinous, King of Phæacia. In Homer we read that Nausicaä was playing at ball with her maidens when Odysseus first saw her in the land of the Phæacians:

O'er the green mead the sporting virgins play,
Their shining veils unbound, along the skies,
Tost and retost, the ball incessant flies.

Baseball.—Of all the games played with balls, there is probably none as popular and as great a favourite as baseball. It is the national game of the United States. It is popular also throughout Canada and Japan.

The origin of the game is somewhat obscure, although authorities are strongly of the opinion that it is a development of the old English game of rounders. The name, of course, is derived from the bases which play an important part in the game, and the ball that is used.

The first appearance of any game similar to baseball in this country was in the early 19th century. A game known as "One old Cat" was popular with schoolboys in the North Atlantic states. It was played by three boys, each fielding and batting in turn, runs being scored by the batsman running to a single base and back again without being cried "out." There were also modifications of this game with four, six, and eight players.

As the game developed it came to be known as town-ball, and in 1833 the Olympic Town-Ball Club was organized in Philadelphia. The first actual matches between organized baseball clubs took place about 1840 and in the neighbourhood of New York. It was in 1843 that the Washington Baseball Club was founded, but not until two years later were the first regular rules drawn up by the Knicker Baseball Club. The first National Association was organized in 1858, and the first entirely professional baseball club, the Cincinnati Red Stockings, was organized ten years later.

For the game of baseball a smooth, level field about 150 yards long and 100 yards broad is required. Upon this field a square, familiarly known as the "diamond," is marked with white chalk. The sides of this square measure 30 yards each, and the nearest corner is distant about 30 yards from the limit of the field. This corner is marked with a plate called the home base. At the other three corners are white canvas bags, about 15 inches square, filled with some soft material, and attached to the ground with pegs. These are known as the first base, second base, and third base, beginning at the right as one looks toward the field.

The game of baseball is played by two sides of nine men each. Each side has nine turns at bat, or innings, unless the leading side at bat does not need the last half of the ninth inning to win the game. A tie at the end of the ninth inning makes additional innings necessary.

Three batsmen are put out in each inning, and the side scoring the greatest number of runs—complete encircling of the bases without being put out—wins. The runner who is not put out but fails to reach the home base is "left on base" but does not score a run. The game generally takes about two hours.

The players consist of the pitcher and catcher on the fielding side; the first baseman, second baseman, third baseman, and shortstop (infielders); and the left fielder,

centre fielder and right fielder (outfielders). The players usually wear shoes with three-cornered spikes.

The umpire has absolute jurisdiction over all points of the game. There is usually one umpire who officiates at the game of baseball, but in all important games there are two. One stands behind the catcher to call the good and bad balls pitched; the other is posted in the infield to give decisions on the plays at the bases.

The implements of the game are balls made of yarn wound upon a small core of vulcanized rubber and covered with white leather. The bat is made of ash or some other hard wood.

Basketball.—A game with balls particularly adapted to the outdoors is basketball; but it is most frequently played in the winter in an indoor gymnasium.

This game was invented in 1891 by James Naismith, an instructor in the gymnasium of the Young Men's Christian Association training school at Springfield, Mass. At first it was not popular, but suddenly it attracted the public fancy and became a favourite gymnasium game both here and in England. It is played with equal enthusiasm by men and women.

The game of basketball is played on a marked-off space about 60 feet by 40 feet. Dimensions are sometimes larger when the game is played in the open air. Directly in the middle of each short side, and 10 feet above the ground, is placed a metal ring 16 by 18 inches in diameter, from which is suspended a net. Behind this "basket," at a distance of about 6 inches, is a backboard.

An inflated, leather-covered ball is used. The purpose of the game is to propel this ball into the opponents' basket by striking it with the open hands. The opponents' basket is the goal, and the side wins that scores the most goals during two periods of play divided by a short interval of rest.

In indoor matches there are generally teams of five, in positions opposing one another. A referee has supervision

of the game and decides when goals have properly been scored, and an umpire watches for fouls. There are also the scorer and the timekeeper.

To start the game, the referee tosses the ball into the air above the heads of the players, who stand within a four foot ring in the centre of the floor. The players jump into the air for possession of the ball and attempt to bat it towards the opposing goal. The ball continues in play until a foul is made, or until it falls into one of the baskets. After a goal has been scored the referee once again puts the ball into play by tossing it over the players' heads.

A foul is an infringement of a rule of the game. When a foul has been made, a player of the opposing side is allowed what is known as a "free throw." This means that he is permitted to make a throw for his opponents' basket from a point of fifteen feet distant from it, and without interference from the other players. If the goal is scored from this "free throw" it counts one point. A goal scored while the ball is in play counts two points.

In basketball the principal qualifications are accuracy, quickness of movement and judgment. Excellent team work is necessary for full enjoyment of the game.

Billiards.—An indoor game of skill, played with balls, is called billiards. The name is said to have originated in the French *bille* (related to the English *billet*) meaning "a stick." The game is played on a rectangular table with small balls and a stick known as the cue.

In "Modern Billiards" it is said that Catkire More, King of Ireland in the 2d century, left "fifty-five billiard balls of brass, with the pools and cues of the same materials" when he died. In the same book we read of the travels of Anacharsis through Greece, about 400 B.C., during which he saw players amusing themselves at a game very similar to the modern game of billiards.

The origin of the game is not definitely known. In Cotton's "Compleat Gamester," an interesting old work published in 1674, we read that "this most gentile, cleanly

and ingenious game" was first played in Italy. But as we read further in the same book we discover that he mentions Spain also as its birthplace!

The English knew the game of billiards at a very early date. Shakespeare has Cleopatra say, in the absence of Antony:

Let us to billiards;
Come, Charmian.
("Antony and Cleopatra," act II, scene 5.)

There seems to be an intimate connection between the lawn game of croquet and billiards. Indeed, some authorities insist that billiards itself was at one time played upon the lawn, and they insist that in this form it was introduced into Europe from the Orient by the Crusaders. Hidden in the forgotten origin of billiards, perhaps there is a connection between the green lawn of croquet and the green baize cloth of the billiard table.

Cotton seems to indicate the connection between croquet and billiards, between the green lawn and the green table, in this bit of verse quoted from his book:

Billiards from Spain at first derived its name,
Both an ingenious and a cleanly game.
One gamester leads (the table green as grass)
And each like warriors, strive to gain the Pass.

Billiards in the United States is played on a pocketless table, though the English type of table with six pockets is occasionally used here. The "three-ball carom game" is the recognized form of American billiards. The table is marked with a centre spot, a red spot and a white spot. The centre spot is on the centre of an imaginary line dividing the table longitudinally into halves. The spot for the red ball and the spot for the white ball are marked on the same line, halfway between the centre spot and the end cushions.

The right to play first is decided by "stringing." The opponent's white ball and the red ball, being spotted, the player plays from

within the imaginary line. Each carom counts one point; a miss counts one to the opponent. A ball is re-spotted on its proper spot if it has been forced off the table. Should red be forced off the table and the red spot be occupied, it is placed on the white spot. The centre spot is used when both spots are occupied and a ball has been forced off the table.

If a carom be made, and the ball afterwards jumps off the table, it is spotted and the count allowed. If the striker moves a ball not his own before he strikes, he cannot count but may play for safety. If he does so after making a carom, the carom does not count, he forfeits one, and his break is ended. If he touches his own ball before he plays he forfeits a point, and cannot play the stroke. Should he, however, touch his ball a second time, the opponent has the option of having the balls replaced as exactly as possible, or of playing on them as they are left. It is a foul stroke to play with the wrong ball, but if the offence is not detected before a second stroke has been made, the player may continue. (Condensed quotation from the "Encyclopædia Britannica.")

Bowling.—The pastime of bowling appears to be an invention of the Middle Ages. At first it was an outdoor game, played upon the green, but later it became an indoor game played upon an alley with wooden balls and nine or ten wooden pins.

Bowling greens are said to have originated in England, though some authorities claim that they first made their appearance in Germany. The inconvenience and awkwardness of playing on the green led to the creation of alleys. Nevertheless, the game was played on the green until the year 1840, the Dutch inhabitants of New Amsterdam being great enthusiasts. Their favourite bowling place was the square just north of the Battery in New York, still known as Bowling Green.

The bowling alley is built up of alternate strips of pine and maple wood, and is about 60 feet in length. On each side of the alley is a 9-inch gutter to catch the balls that are bowled wide.

Originally 9 pins set up in diamond form were used in the game, but during the early part of the 19th century excessive betting became so troublesome to the authorities that the game of "nine-pins" as it was called was prohibited

by law. This prohibition made the game more popular than ever, and in an effort to evade the law the game of "ten-pins" was invented. The game is precisely the same, except that 10 pins are used instead of 9.

To play the game, the 10 pins are set up in the form of a right-angled triangle in four rows. Four pins are at the back, three in front of this row, then two and one as a head pin. As many may play on a side as is desired, five being the customary number for championship teams.

The balls are provided with holes for the thumb and the middle finger. Each player rolls three balls, called a *frame*, and ten frames usually constitute a game. Scoring is estimated in the following manner:

If all ten pins are knocked down by the first ball the player makes what is known as a *strike*. This scores him 10 plus whatever he may make with the first two balls of his next frame.

If he should then make another strike, 10 more are added to his score, making 20, to which are added the pins he may knock down with the first ball of the third frame.

If he should make still another strike, on his third frame, he scores 30 as the first frame.

If this high average is kept up the player scores the maximum, 300 in the 10 frames.

But if all three balls are used and no strike or spare is scored, the player records only the number of pins over-turned. The spare is scored when the player knocks down all pins with two balls, and he may then add the pins made by the first ball to those of his second frame.

In bowling, scores are kept on properly lined score boards and entries are made after every play. Of course, the person showing the largest score at the close of the game is the winner.

Football.—

There is not much doubt that the word football comes down to us, through Teutonic channels, from a series of words, each meaning a foot [says Monckton], but it is a grievous mistake to suppose

that the word meant, originally, a ball that was kicked with the feet, although this is the meaning universally assigned to it. The word meant a ball-game which was played by individuals on foot as opposed to those on horseback. Possibly the fact that the ball gradually came to be of such size and nature as to be capable of being kicked with the foot, may have had something to do with the final nomenclature.

The game of football is very old, and is a particular favourite in England. In the United States it ranks second only to the baseball game in popularity. The origin of the game is disputed.

There are several writers who assert that the game of football was introduced into England by the Romans, but there does not seem to be any definite proof to substantiate this belief. The Romans, it is true, borrowed their games to a great extent from the Greeks, and Pollux does mention a Greek game of ball which has often been looked upon as the origin of football. But no definite facts have been, or can be, traced.

Fitzstephen is the first English writer to mention a game similar to football. In his famous "Survey of London," an 11th century manuscript, he mentions two games, either one of which may be accepted as a prototype of football. He says among other things that the London school-boys "played at the celebrated game of ball."

The next mention of the game is in the time of Edward II. Owing to great disturbances created in the streets of London by mobs who collected to play or to watch the game, an edict was passed in the early 14th century which prohibited football altogether. But authorities tried in vain to put a stop to the popular game, and despite all efforts it persisted.

A game called Calcio, very similar to football, was played in Florence in the 15th century, and became very popular there. In France, too, the game of football soon made its appearance, but it was in England that the game had its greatest development.

It was not, however, until about 1850 that clubs began

to be formed for purposes of arranging football matches. Cambridge was one of the first clubs formed, with Sheffield and Hallam in close succession. The famous Blackheath and Richmond Clubs were not long in following.

As for the game of football itself, it would be ridiculous even to attempt to describe the game here. To those who do not understand it, football seems as though it were played practically with no science and with but few rules. As a matter of fact it is to-day one of the most scientific of all ball games, and requires great skill and perseverance in coaching. A college team will practise carefully sixty or seventy separate plays before it feels ready to meet an opposing team.

The main requisites for a football player are speed, dexterity, skill in dodging, running, good judgment, perseverance. There is no question that it is a difficult game, and more dangerous than most games played with balls; but a knowledge of the rules of the game, skill developed through practice, and a fair amount of strength generally make a good player. During a recent Army-Navy game the players were so well matched that the game was a tie from beginning to end, and rather monotonous to the spectators because there was not a player conspicuously superior to the others.

Golf.—"The origin of golf seems wrapped in mystery, the honour apparently lying between Scotland and the Netherlands," says Charles Evans. The game is very ancient, and has one of the most interesting histories of any ball game.

The name itself has a variety of spellings. It has been known variously as Goff and Goffe, as Gauf and Goufe, as Gaoff and Gaulf, as Gowff and Gowlf. The last is probably the genuine old pronunciation which gives us our modern name. It possibly derives from the Dutch *kolf*, meaning a club.

The origin of golf is buried in antiquity, but we can be reasonably certain that the Dutch were among the first to

play the game to any extent. It is possibly a derivative from one of the ancient ball games of Greece, although we cannot be definite. The first actual appearance of the game appears to be in Holland, and there are many old Dutch pictures which show the game of golf being played.

By 1457 the game had become very popular in Scotland. Mention of the game is made in an Act of the Scotch Parliament in 1457, indicating that the popularity of the game was threatening to interfere with the important pursuit of archery. The game of "Goff" is referred to as an "un-profitabill sport," but it is amusing to note that King James IV, responsible for the Act prohibiting golf, set his people a bad example by indulging in the sport himself!

A game called *choule* was played in Belgium as early as 1353. Balls and iron clubs were used, and the game consisted essentially in hitting the balls with the clubs toward a fixed mark. But though this game was played with club and ball, authorities have proved conclusively that it had no connection with the game of golf which was developing elsewhere.

We trace the greatest development of golf in Scotland. James V was very partial to the "Ancient and Royal Game of Goff," and his daughter, Mary Stuart, was an ardent golfer. Tradition tells us that a few days after the death of her husband she "was seen playing golf and paille-maille in the fields outside Seton," which, her enemies declared, was proof of her indifference.

Charles I was devoted to gaming of all kinds, but particularly to golf. It was while he was on the links at Leith, in 1642, that he received news of the Irish rebellion. Later as a prisoner at Newcastle, he found diversion in playing "the royal game." We are told that

The King was nowhere treated with more honour than at Newcastle, as he himself confessed, both he and his train having liberty to go abroad and play at goff in the Shield Field, without the walls.

During the 17th and 18th centuries the development of golf was marked. By the beginning of the 19th century

it was a game of universal popularity. In 1834 William IV became the patron of St. Andrew's Golf Club, St. Andrew's being at that time, as it is even now, the most famous seat of the game. In 1863 the Prince of Wales (Edward VII) requested that he be elected captain of the club.

Monckton says:

The great delight of this ancient game of "gowff" is that it was, and always will be, a game in which old and young can join on equal footing. Unlike such strenuous pastimes as football or hockey, a good wind and some training are not essentials to the enjoyment of a game, although doubtless such attributes do add to the potential skill of any possible club wielder. This is the reason why golf has endured, and will endure, throughout the ages.

Briefly, the game of golf may be defined as consisting in hitting the ball over a great extent of country, "preferably of that sand-hill nature which is found at the sea-side." The ball is finally hit or "put" into a little hole cut in the turf. The place of the hole in the turf is marked with a flag.

On a full course the recognized number of holes is 18. They are at varying distances apart, from 100 yards to a distance as great as a half-mile. A number of different "clubs," cleverly devised to suit the different positions in which the ball may be found, are used for the various strokes. Thus there is one "club" for driving the ball, another for propelling it from a bad spot in the "rough."

Every player, in golf, plays with his own ball and with no interference from his opponent. The object of each is to hit the ball from the starting point into each successive hole with the fewest strokes. At the end of the course of 18 holes the player who has won the majority of holes is the winner.

TERMS USED IN THE GAME OF GOLF

Baff: To strike the ground with the club when playing, and so loft the ball unduly.

Baffy: A short wooden club, with laid-back face, for lofting shots.

Golf became very popular in the 16th Century, when it was played with great enthusiasm by the courtiers of England and France.

- Bogey*: The number of strokes which a good average player should take to each hole.
- Brassy*: A wooden club with a brass sole.
- Bulger*: A driver in which the face bulges into a convex shape.
- Bunker*: A sand pit.
- Caddie*: The person who carries the clubs and watches the ball.
- Cleek*: Iron-headed club, almost straight-faced, capable of the longest shot of any of the clubs with iron heads.
- Dead*: Ball is "dead" when so near the hole that the putting in the next stroke is a "dead" certainty.
- Divot*: Piece of turf cut out in the act of hitting the ball.
- Dormy*: A side is said to be "dormy" when it has the same number of holes to the good as remain to be played, so that it cannot be beaten.
- Driver*: A straight-faced wooden club used for longest shots, generally used only at the tee.
- Fozzle*: A badly missed or bungled stroke.
- Fore*: A cry of warning to people in front.
- Foursome*: A match in which four persons engage, two on each side.
- Green*: The smoothly rolled, closely cut area which terminates the hole.
- Grip*: The part of club shaft which is held in the hands while playing.
- Half shot*: A shot played with something less than a full swing.
- Handicap*: The strokes which a player receives either in match play or competition.
- Hanging*: Said of a ball that lies on a slope inclining downward in regard to the direction in which it is wished to drive.
- Hazard*: A general term for bunker, whin, long grass, roads, water, and all kinds of bad ground.
- Heel*: To hit the ball with the "heel" of the club, *i.e.*, the part of the face nearest the shaft.
- Honour*: Privilege of striking off first from the tee.
- Iron*: Any iron-headed club.
- Lie*: Angle of the club-head with the shaft.
- Like*: The stroke which makes the player's score equal to his opponent's in the course of playing a hole.
- Line*: Direction in which the hole toward which the player is progressing lies with reference to present position of his ball.
- Mashie*: Iron club with short head.
- Match play*: Play in which score is reckoned by holes won and lost.
- Medal play*: Play in which score is reckoned by the total of strokes taken on the round.
- Niblick*: Short, stiff club with a laid-back iron head, used for

getting the ball out of a bad lie (*lie* means position of ball on ground as well as angle of club-head).

Odd: A stroke more than opponent has played.

Press: To strive to hit harder than you can hit with accuracy.

Pull (or hook): To hit the ball with a cut across it, so that it flies curving to the left.

Putt: To play the strokes on the green.

Putter: A straight-faced club used for putting, usually with iron head.

Rub-of-the-green: A chance deflection of the ball.

Run up: To send the ball low and close to the ground. Opposite of lofting.

Slice: To hit a ball with a cut across it, so that it flies to the right.

Stance: Position of the player when addressing the ball. Reference made to "a good stance," a "bad stance." Also means position relative to each other of the player's feet.

Tee: Little mound of sand on which ball is placed for the first shot to each hole.

Teeing ground: The place marked as the limit, outside of which it is not permitted to drive the ball off.

Up: A player is said to be "one up," "two up," etc., when he is so many holes to the good of his opponent.

Wrist shot: A shot less in length than a half-shot but longer than a putt, made almost entirely with the wrists.

Hockey.—Hockey is a popular outdoor game, played by women as well as men. As played to-day, field hockey is a development of a game known in the British Isles for centuries under the names "hurley," "shinty," and "bandy."

A cricket ball, painted white, is used. The sticks are hooked clubs not more than two inches wide. These clubs have a flat face along the crook. The hockey team usually consists of 11 players—5 forwards, 3 halfbacks, 2 backs, and a goal keeper. The game is divided into two intervals of about 30 minutes each, and the teams change sides at the end of each interval.

The well-equipped hockey player wears strips of felt to protect his knees and shins. This is particularly essential in ice hockey—a newer development of the game. The same rules apply to ice hockey as to field hockey, but there are seven players to a side instead of eleven.

Ice hockey calls for great skill in the art of skating, and

also for very close team work. It is rather a dangerous game and no one should attempt it who is not entirely "at home" on the ice.

Both *hockey* and *croquet* appear to be derived from an old French word *hocquet* meaning a "crooked stick." The game itself is similar in its rudiments to some of the ball games already discussed, and with a knowledge of the science of the game, and a natural skill and dexterity, the game can easily be mastered. Space does not permit of a complete discussion of the game here.

Polo.—A Persian writer of the 11th century refers to this ancient game as the "Game of the Kings." It was, indeed, played by kings and queens and emperors with great enthusiasm. We are told that Shirin, the beautiful wife of Khosura Parviz (last great king of the Sassanian dynasty, who reigned about 600 A.D.) "joined the ladies of her court in matching her skill with the ball and stick against the Shah."

It was about 600 A.D. that polo became popular with the Chinese. In these days of the Tang Dynasty it was played with a light wooden ball. We are told that everyone of importance played polo, and that at night the grounds were lighted with candles for the "fans." From one account we quote:

A Prince of the Tang dynasty taught his ladies to play polo on donkeys with rich saddles and bridles incrusting with jewels. . . . Emperors received the heroes of the polo teams in audience; and one royal lover of the game requested four candidates for official positions to play a tournament, and then he awarded the post to the winner.

It was among the Chinese that the game had its greatest development. An Emperor who reigned about 1160 insisted that the game be played regularly. When it rained he had the ground covered with oiled cloth and sprinkled with sand. He played polo constantly, never tiring of the game.

Polo is not as popular with us as are most of the other ball games. It is like hockey, but played on horseback.

The game requires great skill, a knowledge of horses, quickness, excellent judgment.

Tennis.—Monckton gives an excellent history of the game of tennis in his book, "Pastimes in Times Past." The following is a condensed quotation from his writings:

The origin of the word "tennis" is doubtful. The game was imported into England from France in very early times, though the exact date is not known nor, probably, ever will be. But whether the French nation invented the game, or whether, as some have supposed, it is an adaptation of a ball game introduced from the East after the Crusades, perhaps from the Byzantines, is a matter for surmise.

Given a ball and two opposing sides of players, it does not need much originality in order to devise a game in which a net, or its early mud-wall equivalent, would form a feature, while boundaries would follow of swift necessity.

Tennis was well known in Chaucer's time. . . . It was only the upper classes who could afford to play the game at all, since both racquets and balls were dear; not to mention any question of the scarcity of tennis courts.

But as the years rolled by, courts became much more common; though the various hazards, such as the grille, tambour, and chases did not exert their sway over the game all at once. . . . Not long afterwards, however, the game began to fall into disrepute, mainly on account of the large amount of betting and cheating which used to take place in these public courts; to such an extent, indeed, that the name "*Nacquet*"—the French word for a marker—became synonymous with the word "cheat." It was the old, old story of the evils of betting and gambling—the same evils which, at the commencement of the 18th century led to the suppression of the good old English game of bowls.

But markers, or professional players, were not always of the male sex. One lady has been termed the Joan of Arc of tennis, because of her skill and because she was a contemporary of the Maid of Orleans. This Jean Margot, who flourished about 1427, came to Paris from the Province of Hainault. "She was twenty-eight to thirty years of age, and played better at hand ball than any man had seen; and with that, she played both forehanded and back-handed very powerfully, very cleverly, and very cunningly, as any man could, and there were few men she could not beat except the very best players. . . .

We are not told what became of this mediæval amazon of the tennis court; but as she is described as being both young and pretty,

and with no recorded political views, no doubt she came to an end more fortunate than the stake of her namesake.

The exact period at which the game of Lawn Tennis was first "invented" is again a matter of uncertainty. A passage in the sporting magazine of 1793 reads as follows: "Field Tennis threatens ere long to bowl out cricket. The former game is now patronised by Sir Peter Burrel." It was therefore no new invention, but a mere revival, which about the year 1874 came into existence in England. . . . Since 1875 lawn tennis has steadily looked upwards.

From other sources we learn that in early mediæval times the game of tennis was known as Pame, or Paume. The word is from the Latin *palma* which signifies "palm of the hand." Thus in England the game, which was played with the bare palm, came to be known as palm play. This game of palm play was particularly popular in France among the fashionable men and women.

One authority says:

During the reign of Charles V, palm play, which may properly enough be denominated hand-tennis, was exceedingly fashionable in France, being played by nobility for large sums of money.

During the 16th century tennis courts became common in England. Maitre Perlin, a distinguished French ecclesiastic, in his "Description of England and Scotland," written in 1558, says:

Whilst I remained in England, there were many garrisons all over the country; the people make good cheer and dearly love junketing; and you will see many rich taverns . . . for here you may commonly see artisans such as hatters and joiners, playing tennis for a crown, which is not often seen elsewhere, particularly on a working day.

Henry VII of England was fond of tennis and an enthusiastic player. James I commended tennis as a "game befitting a prince" and highly recommended it to his son. Charles II and Henry VIII frequently played the game, and their wardrobes are said to have contained special kinds of dresses for tennis-playing.

It is undoubtedly to Major Wingfield, who reintroduced

tennis in England in 1874, that we owe gratitude for the greatest development of this favourite game. In the following year the first code of rules for playing lawn tennis were drawn up, and under the supervision of Major Wingfield tennis clubs were founded. Mönckton says:

Let us express our thanks to Major Wingfield for having evolved, from the history of the past, a game which the present generation unites in saying is the king of games, and was, and is, the game of kings.

Originally the game of tennis was played with the open palm—hence the name palm play. But it became the custom later to wear gloves so that the ball would rebound more forcibly. Even the gloves did not satisfy the players, and soon it became customary to bind cords and tendons around the hands. From these cords and tendons it was just a step to the racket.

Most authorities accredit the discovery or invention of rackets to the Italians. The word "racket" itself is derived either from the Latin *retis*, meaning a net, or from the Low German *racken*, meaning to stretch. Evidently rackets were in use as early as Chaucer's time, for we find this sentence in a work written about 1380:

But canstrow playen racket to and fro?

It would appear that hair was used to stuff tennis balls in the 15th and 16th centuries. In "Much Ado About Nothing" we discover the following conversation.

Don Pedro: Hath any man seen him at the Barber's?

Claudio: No; but the Barber's man hath been seen with him, and the old ornament of his cheek hath already stuffed tennis balls.

And in an old play called "Merry Tricks," dated 1611, we find this mention of tennis balls:

Thy beard shall serve to stuff those tennis balls by which I get me heat at tennis.

Many tennis players must have wondered what the word "love" means in the scoring of tennis points. It is used in

the sense of "nothing." Singer, in a note to his rare old work on "Playing Cards" tells us that there is an old Scotch word "luff" which means "nothing." In discussing this matter Monckton says:

Out in the East, a similar word bearing the same sense has been in constant use for ages; and as tennis may have come from the East, this origin is as likely as any other.

The word "volley" is from the French *à la volée*, meaning "on the fly." The word "sette" (now "set") originally meant a collection or number of persons or things, and we can see how the word would have been applied to a collection of games, like a "sette of tennis." As for the word "court," it is a survival of the time when tennis was the game of nobility and was actually played on the courts that surrounded castles.

PLAYING THE GAME OF TENNIS

(Condensed from Compton's Pictured Encyclopedia)

The object of the game is for the player on one side of the net to send the ball into his opponent's court in such a manner that it cannot be returned. . . . At the start of a match of singles—as the game is called when two persons play—one player "serves" while the other "receives." The server stands with both feet behind the base line, tosses the ball into the air, and by striking it with the racket sends it over the net into his opponent's service court diagonally opposite. If the first ball is a "fault" he tries with a second ball. The receiver must hit the ball on the first bound, attempting to drive it back over the net so that it will fall within the court. If he fails to return it over the net or sends it outside the court, he loses the point. . . . The ball often passes back and forth across the net several times before one of the players fails to return it. The service alternates, first from the right then from the left court, and a player continues to serve until he wins or loses a game.

The first point won makes the score 15, the second point 30, the third 40 and the fourth wins the game, unless each player has scored 40. In that case the score is "deuce" and in order to win the game thereafter one player or the other must take two points in succession. The scores "15 to 0" and "30 to 0" are called as "15 love," "30 love," etc., the opposite are "love 15," etc. The first of the two

points after "deuce" is called "advantage in" if won by the server, and "advantage out" if won by the striker-out.

The principal strokes that a player uses in returning the ball are the "forehand drive," the "backhand," the "volley," the "lob," and the "overhead smash." . . . Service gives opportunity for many skilful strokes. . . . There are many "fine points" in lawn tennis and much opportunity for the study of technique. Quickness of mind, eye, and limb are essential—and endurance, too, for a fast match between skilful opponents calls for the strenuous exercise of virtually every muscle in the body.

The game of "doubles" is very similar to "singles" except that there are four players instead of two.

Chess.—Chess is one of the oldest and most interesting of indoor games. It is warfare in miniature, a game of skill pure and simple, and undoubtedly more ancient than any game of which we have record.

The origin of chess, like the origins of most games, is lost in countless legends of the past. Practically every country in the world, savage and civilized, has some game which can be closely identified with our game of chess, and all of these games trace their way into remote antiquity.

Very possibly the game of chess developed from primitive games played with dice. The die is one of the oldest playthings of man, evolved from the knucklebones with which man amused himself in the very dawn of life. The antiquary Thomas Hyde records, in his "Syntagma," the opinion that the game of "odd and even" played with pebbles in primitive times, is nearly coeval with the creation of man.

The pebbles of early man were soon marked to identify those that meant good fortune, those that meant ill fortune. In Africa the savages have for centuries used pebbles marked like dice to discover before a war or battle whether they will be successful or not. These marked pebbles were the first dice.

In Egypt the ancients amused themselves with dice of bone or ivory, marked with small circles to represent units. Such dice have been discovered at Thebes. It may have been out of the games played with these dice that the early

(Courtesy of Metropolitan Museum of Art)

Playing card of the 15th Century, German. Wild woman and unicorn

Egyptians conceived the idea of playing with "men" in miniature warfare, establishing the first crude game of chess. King Rameses is portrayed on the walls of his palace at Thebes engaged with the ladies of his household in a game which closely resembles chess. The pieces or the "men" used in the game stand about $1\frac{1}{2}$ inches high and each stands upon a circular base.

But we cannot be certain that the game of chess originated with the Egyptians. Authorities attribute it variously to the Greeks, the Romans, the Babylonians, the Jews, the Persians, the Hindus, the Irish, the Welsh, even the Chinese and the Arabians. There are some who declare King Solomon invented the game; others who insist that the philosopher Xerxes gave it to the world; still others, that the Mandarin Hansing was the originator. Even Aristotle has been called the "father of chess"!

In his interesting "Museum of Antiquity," L. W. Yaggy says of ancient Greece:

The so-called "game of cities" seems to have resembled our chess or draughts. The board was divided into five parts. Each player tried to checkmate the other by the skilful use of his men.

Of all the explanations offered, the one that seems most credible is that the game originated among the Hindus. The authorities who are best qualified to judge are of the opinion that Hindustan was the cradle of chess, the game having been known there from time immemorial by the name of *chaturanga*. This old name means the four *angas*, or members, of an army.

Chaturanga is a Sanskrit word which was gradually corrupted to *shatrang*. This later word is really Persian in origin and is now in colloquial use throughout India. The word "chess" is evidently derived from it.

There are many chess legends from the 1st to the 10th centuries during the Christian Era, but as they are not authoritative historically and are based upon no authentic facts, we need not dwell upon them here. It was apparently not until about the 12th century that the game became

popular in Europe. The Spaniards probably learned the game from their Moslem conquerors, and the Italians from the Byzantines, but for a long time the game was played only by a few because of its intricacies and because of the skill necessitated. Gradually, however, knowledge of the game spread, more and more people became skilled in it, and finally, toward the close of the 12th century, it became a popular and favourite indoor game.

Chessboards were originally uncoloured. About the beginning of the 13th century the first checkered chessboards made their appearance. The words "check" and "mate" used in chess are simply phonetic equivalents for the Persian words *Shah* (a king) and *mat* (he is dead)—the phrase *shah mat* meaning "The King is dead." From this we derive such words as checkerboard, checkmate, and as Skeat points out in "Curious Survivals," even our word "check" meaning a slip of paper which checks a certain amount of money expended against our account at the bank.

William the Conqueror, Henry I, John, and Edward I were chess players. Napoleon is said to have been fond of the game. Among the most famous chess players of more recent times are:

Philidor, who played blindfolded in London, and whose book "*Analyse des échecs*" (1749) was long regarded an authority.

Count van Nyevelt, who played about 1880.

J. Allgaier, the German player who flourished from 1763 to 1823.

Deschappelles, who was also a brilliant whist player and who was famous during the first half of the 19th century.

Mahé de Bourdonnais, pupil of Deschappelles and greatest player of France in the 19th century.

Macdonnell, who was the greatest English champion.

Sarratt, also a great English champion, replaced by Lewis, his student.

Stauton, who won many times in famous matches with French champions during the 19th century.

Morsphy, famous American player of 19th century, seldom surpassed by players of any nationality.

Pillsbury, leading American master after Morsphy. Died in 1906.

Chess is a game of skill, and it entails subtle variations which cannot possibly be discussed in a brief outline of games such as is given here. As a pastime the game of chess is easily learned, but great practice is required before any amount of skill or mastery is acquired.

The board is divided into 64 checkered squares. The pieces consist of King, Queen, two Rooks (or Castles), two Knights, and two Bishops. The eight men in front are called the Pawns. There is one black side, one white side. At the beginning of the game the Queen stands on a square of her own colour.

The King may move in any direction, only one square at a time, except in castling. Two Kings can never be on adjacent squares. The Queen moves in any direction whether square or diagonal, backward or forward. There is no limit to her range over vacant squares. She takes opponents, but a piece of her own color stops her.

The Rooks may not move diagonally but only in straight lines, forward or backward. Their range, like the Queen's, is unlimited with the same exceptions. The Bishops move diagonally, in any direction, forward or backward.

The Knights move differently. They move from one corner of any rectangle of three squares by two to the opposite corner. A move may be in any direction, and no obstacle is recognized if the squares between happen to be occupied. The Knight always moves to a square of a different color.

The Pawn for the first move may advance either one or two squares straight forward, but afterwards only one square. The Pawn can never move backwards, but can capture only diagonally. A Pawn moves like a Rook, captures like a Bishop, but only one square at a time. (Condensed from the "Encyclopædia Britannica.")

Dominoes.—Most authorities are of the opinion that the familiar game of dominoes originated in Italy. It was unknown until the 18th century. The name is said to

be derived from the ebony backing, resembling the black cloak called *domino*.

The game is played with 28 oblong pieces, the faces of which are of ivory divided into two squares and marked in each half with the value—*i.e.*, each half is marked with one or more black pips, usually up to six. The most popular form of the domino game is called the Draw game. Here are detailed directions for playing the game, quoted in condensed form from our authorities:

Shuffle the dominoes face downward. The lead is usually decided by drawing for the highest domino, but sometimes it is held that any doublet takes precedence. The dominoes are reshuffled, and each player draws at random the number of dominoes required for the particular form of the game, usually seven. The dominoes left behind are called the "stock."

To play a domino is called a "pose." The leader poses first, generally playing his highest domino. At the end of the game the player wins or loses according to the number of pips in the dominoes he has remaining. By some rules the player after playing a double may play another domino that matches—*i.e.*, if he plays a double six, he may play another domino with six at one end. The second player must match the leader's pose by putting one of his dominoes in juxtaposition at one end. In other words, if the leader plays four-five, the second player must play a domino which contains either a four or a five in one of its halves. The four is applied to the four, the five to the five.

Doubles are played crosswise. A double, of course, is a domino in which both halves are alike. If the player cannot match he says "go" and his opponent plays. But in the usual Draw game the player who cannot match draws from the stock until he takes a domino with which he can play.

The player who succeeds in posing all his dominoes calls "Domino," and wins the game. He scores as many points as there are pips on his opponent's remaining dominoes. A game is usually 100 points.

Mah-Jong.—A Chinese game which is enjoying a tremendous vogue at the present time is called Mah-Jong, meaning "Sparrow." It is probably the oldest game existing in China to-day. It is older even than "Choke-choo-hong-ki," the chess game invented, it is said, by the mandarin Hansing to amuse his soldiers. This was in

174 B.C. The game of Mah-Jong, which is known by a variety of names, was invented by a Chinese who lived about the time of Confucius—550 B.C.

The game was first played in Ninpgo, although there are some writers who claim Canton for its birthplace. The name of the inventor is not definitely known, and probably never will be. Through the long ages the game has slumbered in China, suddenly to be revived, carried across the ocean, and made the fad of fashionable America.

A set of Mah-Jong consists of 144 tiles which resemble dominoes. Each tile is composed of two layers, the top one of bamboo, the bottom of ivory or bone. It is said that the original set was made of bamboo and deer horn, the former signifying good health and the latter high official position. But because of the poor wearing quality of deer horn, ivory or bone has been used as a substitute.

The game of Mah-Jong is played by four persons, each for himself. There is no partnership as there is in card games. The game is very fascinating, requires a keenness and quickness of mind, and it helps develop a retentive memory. Because of its great educational value in these respects it is being encouraged in this country and is already one of the most popular pastimes.

Mah-Jong is an elaborate and complicated game and could not be mastered by such brief directions as we could give here. Anyone desirous of learning the game should procure an authoritative volume on this one subject alone. The instructions are lengthy; there are many penalties, rules, regulations, etc.

A variation of Mah-Jong is Pung-Chow. Both games are apparently of the same origin and are played with the same kind of dominoes in practically the same way—but somehow they have been given different names.

GAMES WITH CARDS

Playing cards are of obscure origin, and there are many nations that are credited with being their birthplace. How-

ever, the view generally accepted is that playing cards came to us from Asia.

Some authorities tell us that cards were used in Hindustan in ancient times, although no definite facts seem to be available. The tradition is that both Hindus and Moslems used round playing cards for their amusement, marked with "curious and fantastic inscriptions."

Monckton says that practically nothing is known of the history of cards before the 14th century. However, we learn from other authorities that the Chinese played cards as early as 1120. (M. Abel Remusat.) In the Chinese dictionary, "*Ching-tsze-tung*," it is recorded that cards were invented in the reign of Seun-ho (1120) for the amusement of his concubines.

We know, also, that cards were popular in France toward the close of the 14th century. In an edict of the Provost of Paris, 1397, the working people are forbidden "to play at tennis, bowls, dice, cards or nine-pins on working days." A pack of cards is mentioned by the name they still retain in France—*Jeux de cartes*—by Charles Poupart, treasurer of the household to Charles VI of France (1393).

The first cards were generally rectangular or square in shape, though sometimes they were circular. During the 14th century the game of cards became for the first time popular, and various card games made their appearance in different parts of Europe. Towards the beginning of the 15th century there was a passion for gaming and gambling in France.

"The first mention of cards in the New World is found in the letters of Herrera, a companion of Cortes, who describes the interest manifested by the Aztecs in the card games of the Spanish soldiers." ("Encyclopædia Britannica.") It was not until the 18th century, however, that card games were played to any great extent on this continent.

The early packs consisted usually of eighty-six cards,

among which was an unnumbered card called the "Fou"—*i.e.*, the Fool, now known as the Joker. The sun, moon, justice, charity, and countless other emblems or symbols were used to embellish the cards, and the court cards of King, Queen, Knight, and Knave were almost always used. Most authorities are agreed that the origin and use of emblematic cards are in some distant way connected with chess and chessmen.

The earliest cards were executed by hand, like those designed for Charles VI. Monckton says:

The earliest packs were painted on thin vellum, a substance which the destructive hand of time, not to mention hard usage, would quickly ruin. . . . It was not until three or four thicknesses of card were put together, that the name of the game was changed from *Pagina* to *Carta*, a Latin word from which the English "card" is derived.

In the 15th century wood engraving was introduced in Europe and the manufacture of cards began. This enabled the poorer classes to indulge in the card games for the first time. Prior to the introduction of cheap engraved cards only those who were wealthy enough to afford packs of cards were able to play. For a long time cards were on boards like chess pieces.

The marks on the suits of the earliest German cards are hearts, bells, leaves, and acorns. The next suits in the historical story of cards are marked with swords, batons, cups, and money. These suits are common on the Italian cards of the 15th century. In the next century the French cards bore these four suits, which are still in use to-day: hearts, clubs, spades, and diamonds. The symbol language of cards seems to suggest a military origin.

There are so many card games that it would be impossible to consider them all here. There are, for instance, poker, euchre, whist, pinochle, bridge. And there are usually several variations of each game. The most popular card game at the present time appears to be bridge,

and it is with a discussion of bridge that we will close our story of games.

Bridge.—The game of bridge is supposed to have developed from the game known as whist. The country of its origin is unknown. According to a popular notion, bridge originated in Russia and the very name is derived from the word *Biritch* meaning Russian Whist. There are no facts to substantiate this theory, however, and we cannot accept it as authentic.

Some connect the game with a pastime called *Khedive* enjoyed in Turkey and Egypt. Others insist that the name is derived from the Tartar word *birintch* which means "the town crier." Many claim Denmark as the birthplace of the game.

It was in Turkey, however, that the game of Bridge first attracted public favour and became a popular amusement. One writer suggests that the name may be a corruption of the Turkish *Bir-uch* meaning "one-three." This seems to be the most plausible origin of the name.

According to M. Jean Boussac, Bridge was introduced to England about 1893, after having been played by the Turks, the Russians, the French. He quotes *Le Figaro*, November 26, 1893, to prove his statement. The following year Bridge was already a popular and favourite game in England, and from that period until the present day its development has been rapid. The rules of the game were definitely compiled by a joint committee of the Portland and Turf Clubs in 1895.

Ordinary bridge is played with four players. In each hand the partner of the dealer takes no part in the play. After the first lead his cards are placed on the table, exposed, and played by the dealer as in the game called Dummy Whist. The trump suit is selected by the dealer or his partner without consultation, the former having the first option.

In Bridge the value of tricks and honours varies with each suit declared as trumps. The honours are reckoned

on a scale which is somewhat involved, and which must be learned through actual practice in the game. The score for honours does not count toward winning or losing the rubber, but it is added afterward to the trick score in order to determine the value of the rubber. There are also scores for holding no trumps (chicane) and for winning all the tricks except one (slam).

At the opening of the play partners are arranged, cards shuffled and dealt. The last card is not turned but is placed face downward on the table. The dealer cannot lose the deal through a misdeal. After the cards are dealt, the dealer makes the trump or no-trump declaration, or passes the choice to his partner. After the declaration either adversary may double, the leader having first option. The effect of doubling is that each trick is worth twice as many points as before. But the scores for honours, chicanes, and slams are unaltered.

If the declaration is doubled, the dealer and his partner may redouble, thus making each trick worth four times as much as at first. The declarer always has first option. The value of a trick is limited to 100 points.

There are many rules, regulations and penalties in the game of bridge and there are variations of the game, such as Auction Bridge, Dummy Bridge, Draw Bridge, etc. It is a game that abounds with countless little subtleties that can be acquired only through practice. It is impossible to give full directions for playing the game here, and we have barely touched upon the fundamentals.
